1 Main Page

All the declarations needed for using the PPL's C interface (preprocessor symbols, data types, variables and functions) are collected in the header file `ppl_c.h`. This file, which is designed to work with pre-ANSI and ANSI C compilers as well as C99 and C++ compilers, should be included, either directly or via some other header file, with the directive

```
#include <ppl_c.h>
```

If this directive does not work, then your compiler is unable to find the file `ppl_c.h`. So check that the library is installed (if it is not installed, you may want to make `install`, perhaps with root privileges) in the right place (if not you may want to reconfigure the library using the appropriate pathname for the `--prefix` option); and that your compiler knows where it is installed (if not you should add the path to the directory where `ppl_c.h` is located to the compiler's include file search path; this is usually done with the `-I` option).

The name space of the PPL's C interface is `PPL_*` for preprocessor symbols, enumeration values and variables; and `ppl_*` for data types and function names. The interface systematically uses *opaque data types* (generic pointers that completely hide the internal representations from the client code) and provides all required access functions. By using just the interface, the client code can exploit all the functionalities of the library yet avoid directly manipulating the library's data structures. The advantages are that (1) applications do not depend on the internals of the library (these may change from release to release), and (2) the interface invariants can be thoroughly checked (by the access functions).

Note

All functions taking as input argument an opaque pointer datatype assume that such an argument is actually *referring to a valid PPL object*. For instance, a function with an argument having type `ppl_MIP_Problem_t` will expect a valid MIP_Problem object, previously initialized by calling, e.g., `ppl_new_MIP_Problem`. If that is not the case (e.g., if a null pointer is passed in), the behavior is undefined.

The PPL's C interface is initialized by means of the `ppl_initialize` function. This function must be called *before using any other interface of the library*. The application can release the resources allocated by the library by calling the `ppl_finalize` function. After this function is called *no other interface of the library may be used* until the interface is re-initialized using `ppl_initialize`.

Any application using the PPL should make sure that only the intended version(s) of the library are ever used. The version used can be checked at compile-time thanks to the macros `PPL_VERSION_MAJOR`, `PPL_VERSION_MINOR`, `PPL_VERSION_REVISION` and `PPL_VERSION_BETA`, which give, respectively major, minor, revision and beta numbers of the PPL version. This is an example of their use:

```
#if PPL_VERSION_MAJOR == 0 && PPL_VERSION_MINOR < 6
# error "PPL version 0.6 or following is required"
#endif
```

Compile-time checking, however, is not normally enough, particularly in an environment where there is dynamic linking. Run-time checking can be performed by means of the functions `ppl_version_major`, `ppl_version_minor`, `ppl_version_revision`, and `ppl_version_beta`. The PPL's C interface also provides functions `ppl_version`, returning character string containing the full version number, and `ppl_banner`, returning a string that, in addition, provides (pointers to) other useful information for the library user.

All programs using the PPL's C interface must link with the following libraries: `libppl_c` (PPL's C interface), `libppl` (PPL's core), `libgmpxx` (GMP's C++ interface), and `libgmp` (GMP's library core). On most Unix-like systems, this is done by adding `-lppl_c`, `-lppl`, `-lgmpxx`, and `-lgmp` to the compiler's or linker's command line. For example:

```
gcc myprogram.o -lppl_c -lppl -lgmpxx -lgmp
```

If this does not work, it means that your compiler/linker is not finding the libraries where it expects. Again, this could be because you forgot to install the library or you installed it in a non-standard location. In the latter case you will need to use the appropriate options (usually `-L`) and, if you use shared libraries, some sort of run-time path selection mechanisms. Consult your compiler's documentation for details. Notice that the PPL is built using `Libtool` and an application can exploit this fact to significantly simplify the linking phase. See `Libtool`'s documentation for details. Those working under Linux can find a lot of useful information on how to use program libraries (including static, shared, and dynamically loaded libraries) in the `Program Library HOWTO`.

For examples on how to use the functions provided by the C interface, you are referred to the directory `demos/ppl_lpsol/` in the source distribution. It contains a *Mixed Integer (Linear) Programming* solver written in C. In order to use this solver you will need to install `GLPK` (the GNU Linear Programming Kit): this is used to read linear programs in MPS format.

2 GNU General Public License

Version 3, 29 June 2007

Copyright (C) 2007 Free Software Foundation, Inc. <http://fsf.org/>

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The GNU General Public License is a free, copyleft license for software and other kinds of works.

The licenses for most software and other practical works are designed to take away your freedom to share and change the works. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change all versions of a program--to make sure it remains free software for all its users. We, the Free Software Foundation, use the GNU General Public License for most of our software; it applies also to any other work released this way by its authors. You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for them if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs, and that you know you can do these things.

To protect your rights, we need to prevent others from denying you these rights or asking you to surrender the rights. Therefore, you have certain responsibilities if you distribute copies of the software, or if you modify it: responsibilities to respect the freedom of others.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must pass on to the recipients the same freedoms that you received. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

Developers that use the GNU GPL protect your rights with two steps: (1) assert copyright on the software, and (2) offer you this License giving you legal permission to copy, distribute and/or modify it.

For the developers' and authors' protection, the GPL clearly explains that there is no warranty for this free software. For both users' and authors' sake, the GPL requires that modified versions be marked as changed, so that their problems will not be attributed erroneously to authors of previous versions.

Some devices are designed to deny users access to install or run modified versions of the software inside them, although the manufacturer can do so. This is fundamentally incompatible with the aim of protecting users' freedom to change the software. The systematic pattern of such abuse occurs in the area of products

for individuals to use, which is precisely where it is most unacceptable. Therefore, we have designed this version of the GPL to prohibit the practice for those products. If such problems arise substantially in other domains, we stand ready to extend this provision to those domains in future versions of the GPL, as needed to protect the freedom of users.

Finally, every program is threatened constantly by software patents. States should not allow patents to restrict development and use of software on general-purpose computers, but in those that do, we wish to avoid the special danger that patents applied to a free program could make it effectively proprietary. To prevent this, the GPL assures that patents cannot be used to render the program non-free.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS

0. Definitions.

“This License” refers to version 3 of the GNU General Public License.

“Copyright” also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

“The Program” refers to any copyrightable work licensed under this License. Each licensee is addressed as “you”. “Licensees” and “recipients” may be individuals or organizations.

To “modify” a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a “modified version” of the earlier work or a work “based on” the earlier work.

A “covered work” means either the unmodified Program or a work based on the Program.

To “propagate” a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except executing it on a computer or modifying a private copy. Propagation includes copying, distribution (with or without modification), making available to the public, and in some countries other activities as well.

To “convey” a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.

An interactive user interface displays “Appropriate Legal Notices” to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu, a prominent item in the list meets this criterion.

1. Source Code.

The “source code” for a work means the preferred form of the work for making modifications to it. “Object code” means any non-source form of a work.

A “Standard Interface” means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.

The “System Libraries” of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which is not part of that Major Component, and (b) serves only to enable use of the work with that Major Component, or to implement a Standard Interface for which an implementation is available to the public in source code form. A “Major Component”, in this context, means a major essential component (kernel, window system, and so on) of

the specific operating system (if any) on which the executable work runs, or a compiler used to produce the work, or an object code interpreter used to run it.

The “Corresponding Source” for a work in object code form means all the source code needed to generate, install, and (for an executable work) run the object code and to modify the work, including scripts to control those activities. However, it does not include the work’s System Libraries, or general-purpose tools or generally available free programs which are used unmodified in performing those activities but which are not part of the work. For example, Corresponding Source includes interface definition files associated with source files for the work, and the source code for shared libraries and dynamically linked subprograms that the work is specifically designed to require, such as by intimate data communication or control flow between those subprograms and other parts of the work.

The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source.

The Corresponding Source for a work in source code form is that same work.

2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output, given its content, constitutes a covered work. This License acknowledges your rights of fair use or other equivalent, as provided by copyright law.

You may make, run and propagate covered works that you do not convey, without conditions so long as your license otherwise remains in force. You may convey covered works to others for the sole purpose of having them make modifications exclusively for you, or provide you with facilities for running those works, provided that you comply with the terms of this License in conveying all material for which you do not control copyright. Those thus making or running the covered works for you must do so exclusively on your behalf, under your direction and control, on terms that prohibit them from making any copies of your copyrighted material outside their relationship with you.

Conveying under any other circumstances is permitted solely under the conditions stated below. Sublicensing is not allowed; section 10 makes it unnecessary.

3. Protecting Users’ Legal Rights From Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted on 20 December 1996, or similar laws prohibiting or restricting circumvention of such measures.

When you convey a covered work, you waive any legal power to forbid circumvention of technological measures to the extent such circumvention is effected by exercising rights under this License with respect to the covered work, and you disclaim any intention to limit operation or modification of the work as a means of enforcing, against the work’s users, your or third parties’ legal rights to forbid circumvention of technological measures.

4. Conveying Verbatim Copies.

You may convey verbatim copies of the Program’s source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice; keep intact all notices stating that this License and any non-permissive terms added in accord with section 7 apply to the code; keep intact all notices of the absence of any warranty; and give all recipients a copy of this License along with the Program.

You may charge any price or no price for each copy that you convey, and you may offer support or warranty protection for a fee.

5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of these conditions:

- a) The work must carry prominent notices stating that you modified it, and giving a relevant date.
- b) The work must carry prominent notices stating that it is released under this License and any conditions added under section 7. This requirement modifies the requirement in section 4 to “keep intact all notices”.
- c) You must license the entire work, as a whole, under this License to anyone who comes into possession of a copy. This License will therefore apply, along with any applicable section 7 additional terms, to the whole of the work, and all its parts, regardless of how they are packaged. This License gives no permission to license the work in any other way, but it does not invalidate such permission if you have separately received it.
- d) If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display Appropriate Legal Notices, your work need not make them do so.

A compilation of a covered work with other separate and independent works, which are not by their nature extensions of the covered work, and which are not combined with it such as to form a larger program, in or on a volume of a storage or distribution medium, is called an “aggregate” if the compilation and its resulting copyright are not used to limit the access or legal rights of the compilation’s users beyond what the individual works permit. Inclusion of a covered work in an aggregate does not cause this License to apply to the other parts of the aggregate.

6. Conveying Non-Source Forms.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also convey the machine-readable Corresponding Source under the terms of this License, in one of these ways:

- a) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by the Corresponding Source fixed on a durable physical medium customarily used for software interchange.
- b) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by a written offer, valid for at least three years and valid for as long as you offer spare parts or customer support for that product model, to give anyone who possesses the object code either (1) a copy of the Corresponding Source for all the software in the product that is covered by this License, on a durable physical medium customarily used for software interchange, for a price no more than your reasonable cost of physically performing this conveying of source, or (2) access to copy the Corresponding Source from a network server at no charge.
- c) Convey individual copies of the object code with a copy of the written offer to provide the Corresponding Source. This alternative is allowed only occasionally and noncommercially, and only if you received the object code with such an offer, in accord with subsection 6b.

- d) Convey the object code by offering access from a designated place (gratis or for a charge), and offer equivalent access to the Corresponding Source in the same way through the same place at no further charge. You need not require recipients to copy the Corresponding Source along with the object code. If the place to copy the object code is a network server, the Corresponding Source may be on a different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear directions next to the object code saying where to find the Corresponding Source. Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements.
- e) Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to the general public at no charge under subsection 6d.

A separable portion of the object code, whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.

A “User Product” is either (1) a “consumer product”, which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, “normally used” refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects or is expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use of the product.

“Installation Information” for a User Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions of a covered work in that User Product from a modified version of its Corresponding Source. The information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.

If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM).

The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.

Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying.

7. Additional Terms.

“Additional permissions” are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those

permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option remove any additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission.

Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms:

- a) Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or
- b) Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or
- c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or
- d) Limiting the use for publicity purposes of names of licensors or authors of the material; or
- e) Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or
- f) Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered “further restrictions” within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under this License, you may add to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.

If you add terms to a covered work in accord with this section, you must place, in the relevant source files, a statement of the additional terms that apply to those files, or a notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the form of a separately written license, or stated as exceptions; the above requirements apply either way.

8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any attempt otherwise to propagate or modify it is void, and will automatically terminate your rights under this License (including any patent licenses granted under the third paragraph of section 11).

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, you do not qualify to receive new licenses for the same material under section 10.

9. Acceptance Not Required for Having Copies.

You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. However, nothing other than this License grants you permission to propagate or modify any covered work. These actions infringe copyright if you do not accept this License. Therefore, by modifying or propagating a covered work, you indicate your acceptance of this License to do so.

10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. You are not responsible for enforcing compliance by third parties with this License.

An “entity transaction” is a transaction transferring control of an organization, or substantially all assets of one, or subdividing an organization, or merging organizations. If propagation of a covered work results from an entity transaction, each party to that transaction who receives a copy of the work also receives whatever licenses to the work the party’s predecessor in interest had or could give under the previous paragraph, plus a right to possession of the Corresponding Source of the work from the predecessor in interest, if the predecessor has it or can get it with reasonable efforts.

You may not impose any further restrictions on the exercise of the rights granted or affirmed under this License. For example, you may not impose a license fee, royalty, or other charge for exercise of rights granted under this License, and you may not initiate litigation (including a cross-claim or counterclaim in a lawsuit) alleging that any patent claim is infringed by making, using, selling, offering for sale, or importing the Program or any portion of it.

11. Patents.

A “contributor” is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed is called the contributor’s “contributor version”.

A contributor’s “essential patent claims” are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, “control” includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.

Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor’s essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its contributor version.

In the following three paragraphs, a “patent license” is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To “grant” such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.

If you convey a covered work, knowingly relying on a patent license, and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms of this License, through

a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or (3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. “Knowingly relying” means you have actual knowledge that, but for the patent license, your conveying the covered work in a country, or your recipient’s use of the covered work in a country, would infringe one or more identifiable patents in that country that you have reason to believe are valid.

If, pursuant to or in connection with a single transaction or arrangement, you convey, or propagate by procuring conveyance of, a covered work, and grant a patent license to some of the parties receiving the covered work authorizing them to use, propagate, modify or convey a specific copy of the covered work, then the patent license you grant is automatically extended to all recipients of the covered work and works based on it.

A patent license is “discriminatory” if it does not include within the scope of its coverage, prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights that are specifically granted under this License. You may not convey a covered work if you are a party to an arrangement with a third party that is in the business of distributing software, under which you make payment to the third party based on the extent of your activity of conveying the work, and under which the third party grants, to any of the parties who would receive the covered work from you, a discriminatory patent license (a) in connection with copies of the covered work conveyed by you (or copies made from those copies), or (b) primarily for and in connection with specific products or compilations that contain the covered work, unless you entered into that arrangement, or that patent license was granted, prior to 28 March 2007.

Nothing in this License shall be construed as excluding or limiting any implied license or other defenses to infringement that may otherwise be available to you under applicable patent law.

12. No Surrender of Others’ Freedom.

If conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot convey a covered work so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not convey it at all. For example, if you agree to terms that obligate you to collect a royalty for further conveying from those to whom you convey the Program, the only way you could satisfy both those terms and this License would be to refrain entirely from conveying the Program.

13. Use with the GNU Affero General Public License.

Notwithstanding any other provision of this License, you have permission to link or combine any covered work with a work licensed under version 3 of the GNU Affero General Public License into a single combined work, and to convey the resulting work. The terms of this License will continue to apply to the part which is the covered work, but the special requirements of the GNU Affero General Public License, section 13, concerning interaction through a network will apply to the combination as such.

14. Revised Versions of this License.

The Free Software Foundation may publish revised and/or new versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU General Public License “or any later version” applies to it, you have the option of following the terms and conditions either of that numbered version or of any later version published by the

Free Software Foundation. If the Program does not specify a version number of the GNU General Public License, you may choose any version ever published by the Free Software Foundation.

If the Program specifies that a proxy can decide which future versions of the GNU General Public License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Program.

Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version.

15. Disclaimer of Warranty.

THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. Limitation of Liability.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

17. Interpretation of Sections 15 and 16.

If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively state the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

```
one line to give the program's name and a brief idea of what it does.  
Copyright (C) year name of author
```

This program is free software: you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation, either version 3 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program. If not, see <http://www.gnu.org/licenses/>.

Also add information on how to contact you by electronic and paper mail.

If the program does terminal interaction, make it output a short notice like this when it starts in an interactive mode:

```
program Copyright (C) year name of author
This program comes with ABSOLUTELY NO WARRANTY; for details type 'show w'.
This is free software, and you are welcome to redistribute it
under certain conditions; type 'show c' for details.
```

The hypothetical commands ‘show w’ and ‘show c’ should show the appropriate parts of the General Public License. Of course, your program’s commands might be different; for a GUI interface, you would use an “about box”.

You should also get your employer (if you work as a programmer) or school, if any, to sign a “copyright disclaimer” for the program, if necessary. For more information on this, and how to apply and follow the GNU GPL, see <http://www.gnu.org/licenses/>.

The GNU General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Lesser General Public License instead of this License. But first, please read <http://www.gnu.org/philosophy/why-not-lgpl.html>.

3 GNU Free Documentation License

Version 1.2, November 2002

Copyright (C) 2000, 2001, 2002 Free Software Foundation, Inc.
51 Franklin St, Fifth Floor, Boston, MA 02110-1301, USA.
Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

0. PREAMBLE

The purpose of this License is to make a manual, textbook, or other functional and useful document "free" in the sense of freedom: to assure everyone the effective freedom to copy and redistribute it, with or without modifying it, either commercially or noncommercially. Secondly, this License preserves for the author and publisher a way to get credit for their work, while not being considered responsible for modifications made by others.

This License is a kind of "copyleft", which means that derivative works of the document must themselves be free in the same sense. It complements the GNU General Public License, which is a copyleft license designed for free software.

We have designed this License in order to use it for manuals for free software, because free software needs free documentation: a free program should come with manuals providing the same freedoms that the software does. But this License is not limited to software manuals; it can be used for any textual work, regardless of subject matter or whether it is published as a printed book. We recommend this License principally for works whose purpose is instruction or reference.

1. APPLICABILITY AND DEFINITIONS

This License applies to any manual or other work, in any medium, that contains a notice placed by the copyright holder saying it can be distributed under the terms of this License. Such a notice grants a world-wide, royalty-free license, unlimited in duration, to use that work under the conditions stated herein. The "Document", below, refers to any such manual or work. Any member of the public is a licensee, and is addressed as "you". You accept the license if you copy, modify or distribute the work in a way requiring permission under copyright law.

A "Modified Version" of the Document means any work containing the Document or a portion of it, either copied verbatim, or with modifications and/or translated into another language.

A "Secondary Section" is a named appendix or a front-matter section of the Document that deals exclusively with the relationship of the publishers or authors of the Document to the Document's overall subject (or to related matters) and contains nothing that could fall directly within that overall subject. (Thus, if the Document is in part a textbook of mathematics, a Secondary Section may not explain any mathematics.) The relationship could be a matter of historical connection with the subject or with related matters, or of legal, commercial, philosophical, ethical or political position regarding them.

The "Invariant Sections" are certain Secondary Sections whose titles are designated, as being those of Invariant Sections, in the notice that says that the Document is released under this License. If a section does not fit the above definition of Secondary then it is not allowed to be designated as Invariant. The Document may contain zero Invariant Sections. If the Document does not identify any Invariant Sections then there are none.

The "Cover Texts" are certain short passages of text that are listed, as Front-Cover Texts or Back-Cover Texts, in the notice that says that the Document is released under this License. A Front-Cover Text may be at most 5 words, and a Back-Cover Text may be at most 25 words.

A "Transparent" copy of the Document means a machine-readable copy, represented in a format whose specification is available to the general public, that is suitable for revising the document straightforwardly with generic text editors or (for images composed of pixels) generic paint programs or (for drawings) some widely available drawing editor, and that is suitable for input to text formatters or for automatic translation to a variety of formats suitable for input to text formatters. A copy made in an otherwise Transparent file format whose markup, or absence of markup, has been arranged to thwart or discourage subsequent modification by readers is not Transparent. An image format is not Transparent if used for any substantial amount of text. A copy that is not "Transparent" is called "Opaque".

Examples of suitable formats for Transparent copies include plain ASCII without markup, Texinfo input format, LaTeX input format, SGML or XML using a publicly available DTD, and standard-conforming simple HTML, PostScript or PDF designed for human modification. Examples of transparent image formats include PNG, XCF and JPG. Opaque formats include proprietary formats that can be read and edited only by proprietary word processors, SGML or XML for which the DTD and/or processing tools are not generally available, and the machine-generated HTML, PostScript or PDF produced by some word processors for output purposes only.

The "Title Page" means, for a printed book, the title page itself, plus such following pages as are needed to hold, legibly, the material this License requires to appear in the title page. For works in formats which do not have any title page as such, "Title Page" means the text near the most prominent appearance of the work's title, preceding the beginning of the body of the text.

A section "Entitled XYZ" means a named subunit of the Document whose title either is precisely XYZ or contains XYZ in parentheses following text that translates XYZ in another language. (Here XYZ stands for

a specific section name mentioned below, such as "Acknowledgements", "Dedications", "Endorsements", or "History".) To "Preserve the Title" of such a section when you modify the Document means that it remains a section "Entitled XYZ" according to this definition.

The Document may include Warranty Disclaimers next to the notice which states that this License applies to the Document. These Warranty Disclaimers are considered to be included by reference in this License, but only as regards disclaiming warranties: any other implication that these Warranty Disclaimers may have is void and has no effect on the meaning of this License.

2. VERBATIM COPYING

You may copy and distribute the Document in any medium, either commercially or noncommercially, provided that this License, the copyright notices, and the license notice saying this License applies to the Document are reproduced in all copies, and that you add no other conditions whatsoever to those of this License. You may not use technical measures to obstruct or control the reading or further copying of the copies you make or distribute. However, you may accept compensation in exchange for copies. If you distribute a large enough number of copies you must also follow the conditions in section 3.

You may also lend copies, under the same conditions stated above, and you may publicly display copies.

3. COPYING IN QUANTITY

If you publish printed copies (or copies in media that commonly have printed covers) of the Document, numbering more than 100, and the Document's license notice requires Cover Texts, you must enclose the copies in covers that carry, clearly and legibly, all these Cover Texts: Front-Cover Texts on the front cover, and Back-Cover Texts on the back cover. Both covers must also clearly and legibly identify you as the publisher of these copies. The front cover must present the full title with all words of the title equally prominent and visible. You may add other material on the covers in addition. Copying with changes limited to the covers, as long as they preserve the title of the Document and satisfy these conditions, can be treated as verbatim copying in other respects.

If the required texts for either cover are too voluminous to fit legibly, you should put the first ones listed (as many as fit reasonably) on the actual cover, and continue the rest onto adjacent pages.

If you publish or distribute Opaque copies of the Document numbering more than 100, you must either include a machine-readable Transparent copy along with each Opaque copy, or state in or with each Opaque copy a computer-network location from which the general network-using public has access to download using public-standard network protocols a complete Transparent copy of the Document, free of added material. If you use the latter option, you must take reasonably prudent steps, when you begin distribution of Opaque copies in quantity, to ensure that this Transparent copy will remain thus accessible at the stated location until at least one year after the last time you distribute an Opaque copy (directly or through your agents or retailers) of that edition to the public.

It is requested, but not required, that you contact the authors of the Document well before redistributing any large number of copies, to give them a chance to provide you with an updated version of the Document.

4. MODIFICATIONS

You may copy and distribute a Modified Version of the Document under the conditions of sections 2 and 3 above, provided that you release the Modified Version under precisely this License, with the Modified Version filling the role of the Document, thus licensing distribution and modification of the Modified Version to whoever possesses a copy of it. In addition, you must do these things in the Modified Version:

- **A.** Use in the Title Page (and on the covers, if any) a title distinct from that of the Document, and from those of previous versions (which should, if there were any, be listed in the History section of the Document). You may use the same title as a previous version if the original publisher of that version gives permission.
- **B.** List on the Title Page, as authors, one or more persons or entities responsible for authorship of the modifications in the Modified Version, together with at least five of the principal authors of the

Document (all of its principal authors, if it has fewer than five), unless they release you from this requirement.

- **C.** State on the Title page the name of the publisher of the Modified Version, as the publisher.
- **D.** Preserve all the copyright notices of the Document.
- **E.** Add an appropriate copyright notice for your modifications adjacent to the other copyright notices.
- **F.** Include, immediately after the copyright notices, a license notice giving the public permission to use the Modified Version under the terms of this License, in the form shown in the Addendum below.
- **G.** Preserve in that license notice the full lists of Invariant Sections and required Cover Texts given in the Document's license notice.
- **H.** Include an unaltered copy of this License.
- **I.** Preserve the section Entitled "History", Preserve its Title, and add to it an item stating at least the title, year, new authors, and publisher of the Modified Version as given on the Title Page. If there is no section Entitled "History" in the Document, create one stating the title, year, authors, and publisher of the Document as given on its Title Page, then add an item describing the Modified Version as stated in the previous sentence.
- **J.** Preserve the network location, if any, given in the Document for public access to a Transparent copy of the Document, and likewise the network locations given in the Document for previous versions it was based on. These may be placed in the "History" section. You may omit a network location for a work that was published at least four years before the Document itself, or if the original publisher of the version it refers to gives permission.
- **K.** For any section Entitled "Acknowledgements" or "Dedications", Preserve the Title of the section, and preserve in the section all the substance and tone of each of the contributor acknowledgements and/or dedications given therein.
- **L.** Preserve all the Invariant Sections of the Document, unaltered in their text and in their titles. Section numbers or the equivalent are not considered part of the section titles.
- **M.** Delete any section Entitled "Endorsements". Such a section may not be included in the Modified Version.
- **N.** Do not retitle any existing section to be Entitled "Endorsements" or to conflict in title with any Invariant Section.
- **O.** Preserve any Warranty Disclaimers.

If the Modified Version includes new front-matter sections or appendices that qualify as Secondary Sections and contain no material copied from the Document, you may at your option designate some or all of these sections as invariant. To do this, add their titles to the list of Invariant Sections in the Modified Version's license notice. These titles must be distinct from any other section titles.

You may add a section Entitled "Endorsements", provided it contains nothing but endorsements of your Modified Version by various parties--for example, statements of peer review or that the text has been approved by an organization as the authoritative definition of a standard.

You may add a passage of up to five words as a Front-Cover Text, and a passage of up to 25 words as a Back-Cover Text, to the end of the list of Cover Texts in the Modified Version. Only one passage of Front-Cover Text and one of Back-Cover Text may be added by (or through arrangements made by) any one entity. If the Document already includes a cover text for the same cover, previously added by you or by arrangement made by the same entity you are acting on behalf of, you may not add another; but you may replace the old one, on explicit permission from the previous publisher that added the old one.

The author(s) and publisher(s) of the Document do not by this License give permission to use their names for publicity for or to assert or imply endorsement of any Modified Version.

5. COMBINING DOCUMENTS

You may combine the Document with other documents released under this License, under the terms defined in section 4 above for modified versions, provided that you include in the combination all of the Invariant Sections of all of the original documents, unmodified, and list them all as Invariant Sections of your combined work in its license notice, and that you preserve all their Warranty Disclaimers.

The combined work need only contain one copy of this License, and multiple identical Invariant Sections may be replaced with a single copy. If there are multiple Invariant Sections with the same name but different contents, make the title of each such section unique by adding at the end of it, in parentheses, the name of the original author or publisher of that section if known, or else a unique number. Make the same adjustment to the section titles in the list of Invariant Sections in the license notice of the combined work.

In the combination, you must combine any sections Entitled "History" in the various original documents, forming one section Entitled "History"; likewise combine any sections Entitled "Acknowledgements", and any sections Entitled "Dedications". You must delete all sections Entitled "Endorsements."

6. COLLECTIONS OF DOCUMENTS

You may make a collection consisting of the Document and other documents released under this License, and replace the individual copies of this License in the various documents with a single copy that is included in the collection, provided that you follow the rules of this License for verbatim copying of each of the documents in all other respects.

You may extract a single document from such a collection, and distribute it individually under this License, provided you insert a copy of this License into the extracted document, and follow this License in all other respects regarding verbatim copying of that document.

7. AGGREGATION WITH INDEPENDENT WORKS

A compilation of the Document or its derivatives with other separate and independent documents or works, in or on a volume of a storage or distribution medium, is called an "aggregate" if the copyright resulting from the compilation is not used to limit the legal rights of the compilation's users beyond what the individual works permit. When the Document is included in an aggregate, this License does not apply to the other works in the aggregate which are not themselves derivative works of the Document.

If the Cover Text requirement of section 3 is applicable to these copies of the Document, then if the Document is less than one half of the entire aggregate, the Document's Cover Texts may be placed on covers that bracket the Document within the aggregate, or the electronic equivalent of covers if the Document is in electronic form. Otherwise they must appear on printed covers that bracket the whole aggregate.

8. TRANSLATION

Translation is considered a kind of modification, so you may distribute translations of the Document under the terms of section 4. Replacing Invariant Sections with translations requires special permission from their copyright holders, but you may include translations of some or all Invariant Sections in addition to the original versions of these Invariant Sections. You may include a translation of this License, and all the license notices in the Document, and any Warranty Disclaimers, provided that you also include the original English version of this License and the original versions of those notices and disclaimers. In case of a disagreement between the translation and the original version of this License or a notice or disclaimer, the original version will prevail.

If a section in the Document is Entitled "Acknowledgements", "Dedications", or "History", the requirement (section 4) to Preserve its Title (section 1) will typically require changing the actual title.

9. TERMINATION

You may not copy, modify, sublicense, or distribute the Document except as expressly provided for under this License. Any other attempt to copy, modify, sublicense or distribute the Document is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

10. FUTURE REVISIONS OF THIS LICENSE

The Free Software Foundation may publish new, revised versions of the GNU Free Documentation License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns. See <http://www.gnu.org/copyleft/>.

Each version of the License is given a distinguishing version number. If the Document specifies that a particular numbered version of this License "or any later version" applies to it, you have the option of following the terms and conditions either of that specified version or of any later version that has been published (not as a draft) by the Free Software Foundation. If the Document does not specify a version number of this License, you may choose any version ever published (not as a draft) by the Free Software Foundation.

How to use this License for your documents

To use this License in a document you have written, include a copy of the License in the document and put the following copyright and license notices just after the title page:

```
Copyright (c)  YEAR  YOUR NAME.
Permission is granted to copy, distribute and/or modify this document
under the terms of the GNU Free Documentation License, Version 1.2
or any later version published by the Free Software Foundation;
with no Invariant Sections, no Front-Cover Texts, and no Back-Cover
Texts.  A copy of the license is included in the section entitled
"GNU Free Documentation License".
```

If you have Invariant Sections, Front-Cover Texts and Back-Cover Texts, replace the "with...Texts." line with this:

```
with the Invariant Sections being LIST THEIR TITLES, with the
Front-Cover Texts being LIST, and with the Back-Cover Texts being LIST.
```

If you have Invariant Sections without Cover Texts, or some other combination of the three, merge those two alternatives to suit the situation.

If your document contains nontrivial examples of program code, we recommend releasing these examples in parallel under your choice of free software license, such as the GNU General Public License, to permit their use in free software.

4 Module Index

4.1 Modules

Here is a list of all modules:

C Language Interface	26
Library Initialization and Finalization	26

Version Checking	28
Error Handling	31
Handling	32
Library Datatypes	34

5 Namespace Index

5.1 Namespace List

Here is a list of all namespaces with brief descriptions:

Parma_Polyhedra_Library	41
Parma_Polyhedra_Library::Interfaces	41
Parma_Polyhedra_Library::Interfaces::C	42

6 Class Index

6.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

Parma_Polyhedra_Library::Interfaces::C::Array_Partial_Function_Wrapper (A class to wrap an array of fixed length into a partial function interface suitable for the <code>map_space_dimension()</code> methods)	63
Parma_Polyhedra_Library::Interfaces::C::deterministic_timeout_exception	66
ppl_Artificial_Parameter_Sequence_const_iterator_tag (Types and functions for iterating on PIP artificial parameters)	66
ppl_Artificial_Parameter_tag (Types and functions for PIP artificial parameters)	69
ppl_BD_Shape_double_tag (Types and functions for ppl_BD_Shape_double_tag)	70
ppl_BD_Shape_float_tag (Types and functions for ppl_BD_Shape_float_tag)	97
ppl_BD_Shape_int16_t_tag (Types and functions for ppl_BD_Shape_int16_t_tag)	124
ppl_BD_Shape_int32_t_tag (Types and functions for ppl_BD_Shape_int32_t_tag)	151
ppl_BD_Shape_int64_t_tag (Types and functions for ppl_BD_Shape_int64_t_tag)	178
ppl_BD_Shape_int8_t_tag (Types and functions for ppl_BD_Shape_int8_t_tag)	205
ppl_BD_Shape_long_double_tag (Types and functions for ppl_BD_Shape_long_double_tag)	232
ppl_BD_Shape_mpq_class_tag (Types and functions for ppl_BD_Shape_mpq_class_tag)	260

ppl_BD_Shape_mpz_class_tag (Types and functions for ppl_BD_Shape_mpz_class_tag)	288
ppl_Coefficient_tag (Types and functions for coefficients)	315
ppl_Congruence_System_const_iterator_tag (Types and functions for iterating on congruence systems)	318
ppl_Congruence_System_tag (Types and functions for congruence systems)	320
ppl_Congruence_tag (Types and functions for congruences)	324
ppl_Constraint_System_const_iterator_tag (Types and functions for iterating on constraint systems)	327
ppl_Constraint_System_tag (Types and functions for constraint systems)	329
ppl_Constraint_tag (Types and functions for constraints)	333
ppl_Constraints_Product_C_Polyhedron_Grid_tag (Types and functions for ppl_Constraints_Product_C_Polyhedron_Grid_tag)	336
ppl_Constraints_Product_Grid_C_Polyhedron_tag (Types and functions for ppl_Constraints_Product_Grid_C_Polyhedron_tag)	359
ppl_Constraints_Product_Grid_NNC_Polyhedron_tag (Types and functions for ppl_Constraints_Product_Grid_NNC_Polyhedron_tag)	382
ppl_Constraints_Product_NNC_Polyhedron_Grid_tag (Types and functions for ppl_Constraints_Product_NNC_Polyhedron_Grid_tag)	406
ppl_Double_Box_tag (Types and functions for ppl_Double_Box_tag)	429
ppl_Float_Box_tag (Types and functions for ppl_Float_Box_tag)	454
ppl_Generator_System_const_iterator_tag (Types and functions for iterating on generator systems)	478
ppl_Generator_System_tag (Types and functions for generator systems)	480
ppl_Generator_tag (Types and functions for generators)	483
ppl_Grid_Generator_System_const_iterator_tag (Types and functions for iterating on grid generator systems)	486
ppl_Grid_Generator_System_tag (Types and functions for grid generator systems)	489
ppl_Grid_Generator_tag (Types and functions for grid generators)	492
ppl_Grid_tag (Types and functions for ppl_Grid_tag)	495
ppl_Int16_Box_tag (Types and functions for ppl_Int16_Box_tag)	520
ppl_Int32_Box_tag (Types and functions for ppl_Int32_Box_tag)	544
ppl_Int64_Box_tag (Types and functions for ppl_Int64_Box_tag)	567
ppl_Int8_Box_tag (Types and functions for ppl_Int8_Box_tag)	591

ppl_Linear_Expression_tag (Types and functions for linear expressions)	615
ppl_Long_Double_Box_tag (Types and functions for ppl_Long_Double_Box_tag)	620
ppl_MIP_Problem_tag (Types and functions for MIP problems)	646
ppl_Octagonal_Shape_double_tag (Types and functions for ppl_Octagonal_Shape_double_tag)	656
ppl_Octagonal_Shape_float_tag (Types and functions for ppl_Octagonal_Shape_float_tag)	684
ppl_Octagonal_Shape_int16_t_tag (Types and functions for ppl_Octagonal_Shape_int16_t_tag)	711
ppl_Octagonal_Shape_int32_t_tag (Types and functions for ppl_Octagonal_Shape_int32_t_tag)	739
ppl_Octagonal_Shape_int64_t_tag (Types and functions for ppl_Octagonal_Shape_int64_t_tag)	768
ppl_Octagonal_Shape_int8_t_tag (Types and functions for ppl_Octagonal_Shape_int8_t_tag)	796
ppl_Octagonal_Shape_long_double_tag (Types and functions for ppl_Octagonal_Shape_long_double_tag)	823
ppl_Octagonal_Shape_mpq_class_tag (Types and functions for ppl_Octagonal_Shape_mpq_class_tag)	852
ppl_Octagonal_Shape_mpz_class_tag (Types and functions for ppl_Octagonal_Shape_mpz_class_tag)	880
ppl_PIP_Decision_Node_tag (Types and functions for PIP decision nodes)	909
ppl_PIP_Problem_tag (Types and functions for PIP problems)	910
ppl_PIP_Solution_Node_tag (Types and functions for PIP solution nodes)	919
ppl_PIP_Tree_Node_tag (Types and functions for generic PIP tree nodes)	920
ppl_Pointset_Powerset_BD_Shape_double_const_iterator_tag (Types and functions for iterating on the disjuncts of a const ppl_Pointset_Powerset_BD_Shape_double_tag)	922
ppl_Pointset_Powerset_BD_Shape_double_iterator_tag (Types and functions for iterating on the disjuncts of a ppl_Pointset_Powerset_BD_Shape_double_tag)	924
ppl_Pointset_Powerset_BD_Shape_double_tag (Types and functions for ppl_Pointset_Powerset_BD_Shape_double_tag)	926
ppl_Pointset_Powerset_BD_Shape_float_const_iterator_tag (Types and functions for iterating on the disjuncts of a const ppl_Pointset_Powerset_BD_Shape_float_tag)	940
ppl_Pointset_Powerset_BD_Shape_float_iterator_tag (Types and functions for iterating on the disjuncts of a ppl_Pointset_Powerset_BD_Shape_float_tag)	942
ppl_Pointset_Powerset_BD_Shape_float_tag (Types and functions for ppl_Pointset_Powerset_BD_Shape_float_tag)	944

<code>ppl_Pointset_Powerset_BD_Shape_int16_t_const_iterator_tag</code> (Types and functions for iterating on the disjuncts of a const <code>ppl_Pointset_Powerset_BD_Shape_int16_t_tag</code>)	958
<code>ppl_Pointset_Powerset_BD_Shape_int16_t_iterator_tag</code> (Types and functions for iterating on the disjuncts of a <code>ppl_Pointset_Powerset_BD_Shape_int16_t_tag</code>)	959
<code>ppl_Pointset_Powerset_BD_Shape_int16_t_tag</code> (Types and functions for <code>ppl_Pointset_Powerset_BD_Shape_int16_t_tag</code>)	961
<code>ppl_Pointset_Powerset_BD_Shape_int32_t_const_iterator_tag</code> (Types and functions for iterating on the disjuncts of a const <code>ppl_Pointset_Powerset_BD_Shape_int32_t_tag</code>)	975
<code>ppl_Pointset_Powerset_BD_Shape_int32_t_iterator_tag</code> (Types and functions for iterating on the disjuncts of a <code>ppl_Pointset_Powerset_BD_Shape_int32_t_tag</code>)	977
<code>ppl_Pointset_Powerset_BD_Shape_int32_t_tag</code> (Types and functions for <code>ppl_Pointset_Powerset_BD_Shape_int32_t_tag</code>)	979
<code>ppl_Pointset_Powerset_BD_Shape_int64_t_const_iterator_tag</code> (Types and functions for iterating on the disjuncts of a const <code>ppl_Pointset_Powerset_BD_Shape_int64_t_tag</code>)	993
<code>ppl_Pointset_Powerset_BD_Shape_int64_t_iterator_tag</code> (Types and functions for iterating on the disjuncts of a <code>ppl_Pointset_Powerset_BD_Shape_int64_t_tag</code>)	995
<code>ppl_Pointset_Powerset_BD_Shape_int64_t_tag</code> (Types and functions for <code>ppl_Pointset_Powerset_BD_Shape_int64_t_tag</code>)	997
<code>ppl_Pointset_Powerset_BD_Shape_int8_t_const_iterator_tag</code> (Types and functions for iterating on the disjuncts of a const <code>ppl_Pointset_Powerset_BD_Shape_int8_t_tag</code>)	1011
<code>ppl_Pointset_Powerset_BD_Shape_int8_t_iterator_tag</code> (Types and functions for iterating on the disjuncts of a <code>ppl_Pointset_Powerset_BD_Shape_int8_t_tag</code>)	1013
<code>ppl_Pointset_Powerset_BD_Shape_int8_t_tag</code> (Types and functions for <code>ppl_Pointset_Powerset_BD_Shape_int8_t_tag</code>)	1015
<code>ppl_Pointset_Powerset_BD_Shape_long_double_const_iterator_tag</code> (Types and functions for iterating on the disjuncts of a const <code>ppl_Pointset_Powerset_BD_Shape_long_double_tag</code>)	1029
<code>ppl_Pointset_Powerset_BD_Shape_long_double_iterator_tag</code> (Types and functions for iterating on the disjuncts of a <code>ppl_Pointset_Powerset_BD_Shape_long_double_tag</code>)	1031
<code>ppl_Pointset_Powerset_BD_Shape_long_double_tag</code> (Types and functions for <code>ppl_Pointset_Powerset_BD_Shape_long_double_tag</code>)	1032
<code>ppl_Pointset_Powerset_BD_Shape_mpq_class_const_iterator_tag</code> (Types and functions for iterating on the disjuncts of a const <code>ppl_Pointset_Powerset_BD_Shape_mpq_class_tag</code>)	1047
<code>ppl_Pointset_Powerset_BD_Shape_mpq_class_iterator_tag</code> (Types and functions for iterating on the disjuncts of a <code>ppl_Pointset_Powerset_BD_Shape_mpq_class_tag</code>)	1049
<code>ppl_Pointset_Powerset_BD_Shape_mpq_class_tag</code> (Types and functions for <code>ppl_Pointset_Powerset_BD_Shape_mpq_class_tag</code>)	1050
<code>ppl_Pointset_Powerset_BD_Shape_mpz_class_const_iterator_tag</code> (Types and functions for iterating on the disjuncts of a const <code>ppl_Pointset_Powerset_BD_Shape_mpz_class_tag</code>)	1065

<code>ppl_Pointset_Powerset_BD_Shape_mpz_class_iterator_tag</code> (Types and functions for iterating on the disjuncts of a <code>ppl_Pointset_Powerset_BD_Shape_mpz_class_tag</code>)	1067
<code>ppl_Pointset_Powerset_BD_Shape_mpz_class_tag</code> (Types and functions for <code>ppl_Pointset_Powerset_BD_Shape_mpz_class_tag</code>)	1068
<code>ppl_Pointset_Powerset_C_Polyhedron_const_iterator_tag</code> (Types and functions for iterating on the disjuncts of a const <code>ppl_Pointset_Powerset_C_Polyhedron_tag</code>)	1083
<code>ppl_Pointset_Powerset_C_Polyhedron_iterator_tag</code> (Types and functions for iterating on the disjuncts of a <code>ppl_Pointset_Powerset_C_Polyhedron_tag</code>)	1085
<code>ppl_Pointset_Powerset_C_Polyhedron_tag</code> (Types and functions for the Pointset_Powerset of C_Polyhedron objects)	1088
<code>ppl_Pointset_Powerset_Double_Box_const_iterator_tag</code> (Types and functions for iterating on the disjuncts of a const <code>ppl_Pointset_Powerset_Double_Box_tag</code>)	1103
<code>ppl_Pointset_Powerset_Double_Box_iterator_tag</code> (Types and functions for iterating on the disjuncts of a <code>ppl_Pointset_Powerset_Double_Box_tag</code>)	1104
<code>ppl_Pointset_Powerset_Double_Box_tag</code> (Types and functions for <code>ppl_Pointset_Powerset_Double_Box_tag</code>)	1106
<code>ppl_Pointset_Powerset_Float_Box_const_iterator_tag</code> (Types and functions for iterating on the disjuncts of a const <code>ppl_Pointset_Powerset_Float_Box_tag</code>)	1119
<code>ppl_Pointset_Powerset_Float_Box_iterator_tag</code> (Types and functions for iterating on the disjuncts of a <code>ppl_Pointset_Powerset_Float_Box_tag</code>)	1121
<code>ppl_Pointset_Powerset_Float_Box_tag</code> (Types and functions for <code>ppl_Pointset_Powerset_Float_Box_tag</code>)	1123
<code>ppl_Pointset_Powerset_Grid_const_iterator_tag</code> (Types and functions for iterating on the disjuncts of a const <code>ppl_Pointset_Powerset_Grid_tag</code>)	1136
<code>ppl_Pointset_Powerset_Grid_iterator_tag</code> (Types and functions for iterating on the disjuncts of a <code>ppl_Pointset_Powerset_Grid_tag</code>)	1137
<code>ppl_Pointset_Powerset_Grid_tag</code> (Types and functions for <code>ppl_Pointset_Powerset_Grid_tag</code>)	1139
<code>ppl_Pointset_Powerset_Int16_Box_const_iterator_tag</code> (Types and functions for iterating on the disjuncts of a const <code>ppl_Pointset_Powerset_Int16_Box_tag</code>)	1152

7 File Index

7.1 File List

Here is a list of all files with brief descriptions:

ppl_c.h	1716
ppl_c_implementation_common.cc	1722
ppl_c_implementation_common.defs.hh	1775
ppl_c_implementation_common.inlines.hh	1778

8 Module Documentation

8.1 C Language Interface

The Parma Polyhedra Library comes equipped with an interface for the C language.

8.2 Library Initialization and Finalization

Functions

- `int ppl_initialize (void)`
Initializes the Parma Polyhedra Library. This function must be called before any other function.
- `int ppl_finalize (void)`
Finalizes the Parma Polyhedra Library. This function must be called after any other function.
- `int ppl_set_rounding_for_PPL (void)`
Sets the FPU rounding mode so that the PPL abstractions based on floating point numbers work correctly.
- `int ppl_restore_pre_PPL_rounding (void)`
Sets the FPU rounding mode as it was before initialization of the PPL.
- `int ppl_irrational_precision (unsigned *p)`
Writes to `p` the precision parameter used for irrational calculations.
- `int ppl_set_irrational_precision (unsigned p)`
Sets the precision parameter used for irrational calculations.

8.2.1 Detailed Description

Functions for initialization/finalization of the library, as well as setting/resetting of floating-point rounding mode.

8.2.2 Function Documentation

8.2.2.1 `int ppl_finalize (void)`

Finalizes the Parma Polyhedra Library. This function must be called after any other function.

Returns

`PPL_ERROR_INVALID_ARGUMENT` if the library was already finalized.

Definition at line 243 of file `ppl_c_implementation_common.cc`.

References `Parma_Polyhedra_Library::Interfaces::C::saved_cxx_Variable_output_function`.

8.2.2.2 `int ppl_initialize (void)`

Initializes the Parma Polyhedra Library. This function must be called before any other function.

Returns

`PPL_ERROR_INVALID_ARGUMENT` if the library was already initialized.

Definition at line 181 of file `ppl_c_implementation_common.cc`.

References `Parma_Polyhedra_Library::Interfaces::C::c_variable_default_output_function()`, `Parma_Polyhedra_Library::Interfaces::C::c_variable_output_function`, `Parma_Polyhedra_Library::Interfaces::C::cxx_Variable_output_function()`, and `Parma_Polyhedra_Library::Interfaces::C::saved_cxx_Variable_output_function`.

8.2.2.3 `int ppl_irrational_precision (unsigned * p)`

Writes to `p` the precision parameter used for irrational calculations.

Definition at line 328 of file `ppl_c_implementation_common.cc`.

8.2.2.4 `int ppl_restore_pre_PPL_rounding (void)`

Sets the FPU rounding mode as it was before initialization of the PPL.

After calling this function it is absolutely necessary to call `set_rounding_for_PPL()` before using any PPL abstractions based on floating point numbers. This is performed automatically at finalization-time.

Definition at line 321 of file `ppl_c_implementation_common.cc`.

8.2.2.5 `int ppl_set_irrational_precision (unsigned p)`

Sets the precision parameter used for irrational calculations.

If `p` is less than or equal to `INT_MAX`, sets the precision parameter used for irrational calculations to `p`. Then, in the irrational calculations returning an unbounded rational, (e.g., when computing a square root), the lesser between numerator and denominator will be limited to 2^{**p} .

Definition at line 335 of file `ppl_c_implementation_common.cc`.

8.2.2.6 `int ppl_set_rounding_for_PPL (void)`

Sets the FPU rounding mode so that the PPL abstractions based on floating point numbers work correctly.

This is performed automatically at initialization-time. Calling this function is needed only if `restore_pre_PPL_rounding()` has been previously called.

Definition at line 314 of file `ppl_c_implementation_common.cc`.

8.3 Version Checking

Defines

- `#define PPL_VERSION "0.11.2"`
A string containing the PPL version.

- `#define PPL_VERSION_MAJOR 0`
The major number of the PPL version.
- `#define PPL_VERSION_MINOR 11`
The minor number of the PPL version.
- `#define PPL_VERSION_REVISION 2`
The revision number of the PPL version.
- `#define PPL_VERSION_BETA 0`
The beta number of the PPL version. This is zero for official releases and nonzero for development snapshots.

Functions

- `int ppl_version_major (void)`
Returns the major number of the PPL version.
- `int ppl_version_minor (void)`
Returns the minor number of the PPL version.
- `int ppl_version_revision (void)`
Returns the revision number of the PPL version.
- `int ppl_version_beta (void)`
Returns the beta number of the PPL version.
- `int ppl_version (const char **p)`
*Writes to *p a pointer to a character string containing the PPL version.*
- `int ppl_banner (const char **p)`
*Writes to *p a pointer to a character string containing the PPL banner.*

8.3.1 Detailed Description

Symbolic constants and functions related to library version checking.

8.3.2 Define Documentation

8.3.2.1 `#define PPL_VERSION "0.11.2"`

A string containing the PPL version.

Let M and m denote the numbers associated to `PPL_VERSION_MAJOR` and `PPL_VERSION_MINOR`, respectively. The format of `PPL_VERSION` is M "." m if both `PPL_VERSION_REVISION` (r) and `PPL_VERSION_BETA` (b) are zero, M "." m "pre" b if `PPL_VERSION_REVISION` is zero and `PPL_VERSION_BETA` is not zero, M "." m "." r if `PPL_VERSION_REVISION` is not zero and

PPL_VERSION_BETA is zero, M "." m "." r "pre" b if neither PPL_VERSION_REVISION nor PPL_VERSION_BETA are zero.

Definition at line 262 of file ppl_c.h.

8.3.2.2 #define PPL_VERSION_BETA 0

The beta number of the PPL version. This is zero for official releases and nonzero for development snapshots.

Definition at line 287 of file ppl_c.h.

8.3.2.3 #define PPL_VERSION_MAJOR 0

The major number of the PPL version.

Definition at line 268 of file ppl_c.h.

8.3.2.4 #define PPL_VERSION_MINOR 11

The minor number of the PPL version.

Definition at line 274 of file ppl_c.h.

8.3.2.5 #define PPL_VERSION_REVISION 2

The revision number of the PPL version.

Definition at line 280 of file ppl_c.h.

8.3.3 Function Documentation

8.3.3.1 int ppl_banner (const char ** p)

Writes to *p a pointer to a character string containing the PPL banner.

The banner provides information about the PPL version, the licensing, the lack of any warranty whatsoever, the C++ compiler used to build the library, where to report bugs and where to look for further information.

Definition at line 376 of file ppl_c_implementation_common.cc.

8.3.3.2 int ppl_version (const char ** p)

Writes to *p a pointer to a character string containing the PPL version.

Definition at line 366 of file ppl_c_implementation_common.cc.

8.3.3.3 `int ppl_version_beta (void)`

Returns the beta number of the PPL version.

Definition at line 360 of file ppl_c_implementation_common.cc.

8.3.3.4 `int ppl_version_major (void)`

Returns the major number of the PPL version.

Definition at line 342 of file ppl_c_implementation_common.cc.

8.3.3.5 `int ppl_version_minor (void)`

Returns the minor number of the PPL version.

Definition at line 348 of file ppl_c_implementation_common.cc.

8.3.3.6 `int ppl_version_revision (void)`

Returns the revision number of the PPL version.

Definition at line 354 of file ppl_c_implementation_common.cc.

8.4 Error Handling

Enumerations

- `enum ppl_enum_error_code` {
`PPL_ERROR_OUT_OF_MEMORY`, `PPL_ERROR_INVALID_ARGUMENT`, `PPL_ERROR_`
`DOMAIN_ERROR`, `PPL_ERROR_LENGTH_ERROR`,
`PPL_ARITHMETIC_OVERFLOW`, `PPL_STDIO_ERROR`, `PPL_ERROR_INTERNAL_ERROR`,
`PPL_ERROR_UNKNOWN_STANDARD_EXCEPTION`,
`PPL_ERROR_UNEXPECTED_ERROR`, `PPL_TIMEOUT_EXCEPTION`, `PPL_ERROR_LOGIC_`
`ERROR` }

Defines the error codes that any function may return.

Functions

- `int ppl_set_error_handler (void(*h)(enum ppl_enum_error_code code, const char *description))`
Installs the user-defined error handler pointed at by h.

8.4.1 Detailed Description

Symbolic constants and functions related to error reporting/handling.

8.4.2 Enumeration Type Documentation

8.4.2.1 `enum ppl_enum_error_code`

Defines the error codes that any function may return.

Enumerator:

PPL_ERROR_OUT_OF_MEMORY The virtual memory available to the process has been exhausted.

PPL_ERROR_INVALID_ARGUMENT A function has been invoked with an invalid argument.

PPL_ERROR_DOMAIN_ERROR A function has been invoked outside its domain of definition.

PPL_ERROR_LENGTH_ERROR The construction of an object that would exceed its maximum permitted size was attempted.

PPL_ARITHMETIC_OVERFLOW An arithmetic overflow occurred and the computation was consequently interrupted. This can *only* happen in library's incarnations using bounded integers as coefficients.

PPL_STDIO_ERROR An error occurred during a C input/output operation. A more precise indication of what went wrong is available via `errno`.

PPL_ERROR_INTERNAL_ERROR An internal error that was diagnosed by the PPL itself. This indicates a bug in the PPL.

PPL_ERROR_UNKNOWN_STANDARD_EXCEPTION A standard exception has been raised by the C++ run-time environment. This indicates a bug in the PPL.

PPL_ERROR_UNEXPECTED_ERROR A totally unknown, totally unexpected error happened. This indicates a bug in the PPL.

PPL_TIMEOUT_EXCEPTION An exception has been raised by the PPL as a timeout previously set by the user has expired.

PPL_ERROR_LOGIC_ERROR The client program attempted to use the PPL in a way that violates its internal logic. This happens, for instance, when the client attempts to use the timeout facilities on a system that does not support them.

Definition at line 341 of file `ppl_c.h`.

8.4.3 Function Documentation

8.4.3.1 `int ppl_set_error_handler (void(*) (enum ppl_enum_error_code code, const char *description) h)`

Installs the user-defined error handler pointed at by `h`.

The error handler takes an error code and a textual description that gives further information about the actual error. The C string containing the textual description is read-only and its existence is not guaranteed after the handler has returned.

8.5 Handling

Functions

- `int ppl_set_timeout` (unsigned time)
Sets the timeout for computations whose completion could require an exponential amount of time.
- `int ppl_reset_timeout` (void)
Resets the timeout time so that the computation is not interrupted.
- `int ppl_set_deterministic_timeout` (unsigned weight)
Sets a threshold for computations whose completion could require an exponential amount of time.
- `int ppl_reset_deterministic_timeout` (void)
Resets the deterministic timeout so that the computation is not interrupted.

8.5.1 Detailed Description

Functions for setting and resetting timeouts.

8.5.2 Function Documentation

8.5.2.1 `int ppl_reset_deterministic_timeout` (void)

Resets the deterministic timeout so that the computation is not interrupted.

Definition at line 301 of file `ppl_c_implementation_common.cc`.

References `Parma_Polyhedra_Library::Interfaces::C::reset_deterministic_timeout()`.

8.5.2.2 `int ppl_reset_timeout` (void)

Resets the timeout time so that the computation is not interrupted.

Definition at line 270 of file `ppl_c_implementation_common.cc`.

References `Parma_Polyhedra_Library::Interfaces::C::reset_timeout()`.

8.5.2.3 `int ppl_set_deterministic_timeout` (unsigned *weight*)

Sets a threshold for computations whose completion could require an exponential amount of time.

Parameters

weight The maximum computational weight allowed. It must be strictly greater than zero.

Computations taking exponential time will be interrupted some time after reaching the `weight` complexity threshold. If the computation is interrupted that way, the interrupted function will return error code `PPL_TIMEOUT_EXCEPTION`. Otherwise, if the computation completes without being interrupted, then the deterministic timeout should be reset by calling `ppl_reset_deterministic_timeout()`.

Note

This "timeout" checking functionality is said to be *deterministic* because it is not based on actual elapsed time. Its behavior will only depend on (some of the) computations performed in the PPL library and it will be otherwise independent from the computation environment (CPU, operating system, compiler, etc.).

Warning

The weight mechanism is under alpha testing. In particular, there is still no clear relation between the weight threshold and the actual computational complexity. As a consequence, client applications should be ready to reconsider the tuning of these weight thresholds when upgrading to newer version of the PPL.

Definition at line 283 of file `ppl_c_implementation_common.cc`.

References `Parma_Polyhedra_Library::Interfaces::C::reset_deterministic_timeout()`.

8.5.2.4 `int ppl_set_timeout (unsigned time)`

Sets the timeout for computations whose completion could require an exponential amount of time.

Parameters

time The number of hundredths of seconds. It must be strictly greater than zero.

Computations taking exponential time will be interrupted some time after `time` hundredths of seconds have elapsed since the call to the timeout setting function. If the computation is interrupted that way, the interrupted function will return error code `PPL_TIMEOUT_EXCEPTION`. Otherwise, if the computation completes without being interrupted, then the timeout should be reset by calling `ppl_reset_timeout()`.

Definition at line 252 of file `ppl_c_implementation_common.cc`.

References `Parma_Polyhedra_Library::Interfaces::C::reset_timeout()`.

8.6 Library Datatypes

Typedefs for the library datatypes and related symbolic constants.

Typedefs

- typedef size_t `ppl_dimension_type`
An unsigned integral type for representing space dimensions.
- typedef const char * `ppl_io_variable_output_function_type` (`ppl_dimension_type` var)
The type of output functions used for printing variables.

Enumerations

- enum `ppl_enum_Constraint_Type` {
`PPL_CONSTRAINT_TYPE_LESS_THAN`, `PPL_CONSTRAINT_TYPE_LESS_OR_EQUAL`,
`PPL_CONSTRAINT_TYPE_EQUAL`, `PPL_CONSTRAINT_TYPE_GREATER_OR_EQUAL`,
`PPL_CONSTRAINT_TYPE_GREATER_THAN` }
Describes the relations represented by a constraint.
- enum `ppl_enum_Generator_Type` { `PPL_GENERATOR_TYPE_LINE`, `PPL_GENERATOR_TYPE_RAY`, `PPL_GENERATOR_TYPE_POINT`, `PPL_GENERATOR_TYPE_CLOSURE_POINT` }
Describes the different kinds of generators.
- enum `ppl_enum_Grid_Generator_Type` { `PPL_GRID_GENERATOR_TYPE_LINE`, `PPL_GRID_GENERATOR_TYPE_PARAMETER`, `PPL_GRID_GENERATOR_TYPE_POINT` }
Describes the different kinds of grid generators.
- enum `ppl_enum_Bounded_Integer_Type_Width` {
`PPL_BITS_8`, `PPL_BITS_16`, `PPL_BITS_32`, `PPL_BITS_64`,
`PPL_BITS_128` }
Widths of bounded integer types.
- enum `ppl_enum_Bounded_Integer_Type_Representation` { `PPL_UNSIGNED`, `PPL_SIGNED_2_COMPLEMENT` }
Representation of bounded integer types.
- enum `ppl_enum_Bounded_Integer_Type_Overflow` { `PPL_OVERFLOW_WRAPS`, `PPL_OVERFLOW_UNDEFINED`, `PPL_OVERFLOW_IMPOSSIBLE` }
Overflow behavior of bounded integer types.

Functions

- int `ppl_max_space_dimension` (`ppl_dimension_type` *m)
Writes to `m` the maximum space dimension this library can handle.
- int `ppl_not_a_dimension` (`ppl_dimension_type` *m)
Writes to `m` a value that does not designate a valid dimension.
- int `ppl_io_print_variable` (`ppl_dimension_type` var)
Pretty-prints `var` to `stdout`.
- int `ppl_io_fprint_variable` (FILE *stream, `ppl_dimension_type` var)
Pretty-prints `var` to the given output `stream`.
- int `ppl_io_asprint_variable` (char **strp, `ppl_dimension_type` var)
Pretty-prints `var` to a malloc-allocated string, a pointer to which is returned via `strp`.
- int `ppl_io_set_variable_output_function` (`ppl_io_variable_output_function_type` *p)

Sets the output function to be used for printing variables to `p`.

- `int ppl_io_get_variable_output_function (ppl_io_variable_output_function_type **pp)`
Writes a pointer to the current variable output function to `pp`.
- `char * ppl_io_wrap_string (const char *src, unsigned indent_depth, unsigned preferred_first_line_length, unsigned preferred_line_length)`
Utility function for the wrapping of lines of text.

Variables

- `unsigned int PPL_COMPLEXITY_CLASS_POLYNOMIAL`
Code of the worst-case polynomial complexity class.
- `unsigned int PPL_COMPLEXITY_CLASS_SIMPLEX`
Code of the worst-case exponential but typically polynomial complexity class.
- `unsigned int PPL_COMPLEXITY_CLASS_ANY`
Code of the universal complexity class.
- `unsigned int PPL_POLY_CON_RELATION_IS_DISJOINT`
Individual bit saying that the polyhedron and the set of points satisfying the constraint are disjoint.
- `unsigned int PPL_POLY_CON_RELATION_STRICTLY_INTERSECTS`
Individual bit saying that the polyhedron intersects the set of points satisfying the constraint, but it is not included in it.
- `unsigned int PPL_POLY_CON_RELATION_IS_INCLUDED`
Individual bit saying that the polyhedron is included in the set of points satisfying the constraint.
- `unsigned int PPL_POLY_CON_RELATION_SATURATES`
Individual bit saying that the polyhedron is included in the set of points saturating the constraint.
- `unsigned int PPL_POLY_GEN_RELATION_SUBSUMES`
Individual bit saying that adding the generator would not change the polyhedron.

8.6.1 Detailed Description

Typedefs for the library datatypes and related symbolic constants. The datatypes provided by the library should be manipulated by means of the corresponding opaque pointer types and the functions working on them.

Note

To simplify the detection of common programming mistakes, we provide both pointer-to-const and pointer-to-nonconst opaque pointers, with implicit conversions mapping each pointer-to-nonconst to the corresponding pointer-to-const when needed. The user of the C interface is therefore recommended to adopt the pointer-to-const type whenever read-only access is meant.

8.6.2 Typedef Documentation

8.6.2.1 typedef size_t ppl_dimension_type

An unsigned integral type for representing space dimensions.

Definition at line 497 of file ppl_c.h.

8.6.2.2 typedef const char* ppl_io_variable_output_function_type(ppl_dimension_type var)

The type of output functions used for printing variables.

An output function for variables must write a textual representation for `var` to a character buffer, null-terminate it, and return a pointer to the beginning of the buffer. In case the operation fails, 0 should be returned and perhaps `errno` should be set in a meaningful way. The library does nothing with the buffer, besides printing its contents.

Definition at line 541 of file ppl_c.h.

8.6.3 Enumeration Type Documentation

8.6.3.1 enum ppl_enum_Bounded_Integer_Type_Overflow

Overflow behavior of bounded integer types.

Enumerator:

PPL_OVERFLOW_WRAPS On overflow, wrapping takes place. This means that, for a w -bit bounded integer, the computation happens modulo 2^w .

PPL_OVERFLOW_UNDEFINED On overflow, the result is undefined. This simply means that the result of the operation resulting in an overflow can take any value.

Note

Even though something more serious can happen in the system being analyzed ---due to, e.g., C's undefined behavior---, here we are only concerned with the results of arithmetic operations. It is the responsibility of the analyzer to ensure that other manifestations of undefined behavior are conservatively approximated.

PPL_OVERFLOW_IMPOSSIBLE Overflow is impossible. This is for the analysis of languages where overflow is trapped before it affects the state, for which, thus, any indication that an overflow may have affected the state is necessarily due to the imprecision of the analysis.

Definition at line 2405 of file ppl_c.h.

8.6.3.2 enum ppl_enum_Bounded_Integer_Type_Representation

Representation of bounded integer types.

Enumerator:

PPL_UNSIGNED Unsigned binary.

PPL_SIGNED_2_COMPLEMENT Signed binary where negative values are represented by the two's complement of the absolute value.

Definition at line 2392 of file ppl_c.h.

8.6.3.3 enum ppl_enum_Bounded_Integer_Type_Width

Widths of bounded integer types.

Enumerator:

PPL_BITS_8 8 bits.

PPL_BITS_16 16 bits.

PPL_BITS_32 32 bits.

PPL_BITS_64 64 bits.

PPL_BITS_128 128 bits.

Definition at line 2376 of file ppl_c.h.

8.6.3.4 enum ppl_enum_Constraint_Type

Describes the relations represented by a constraint.

Enumerator:

PPL_CONSTRAINT_TYPE_LESS_THAN The constraint is of the form $e < 0$.

PPL_CONSTRAINT_TYPE_LESS_OR_EQUAL The constraint is of the form $e \leq 0$.

PPL_CONSTRAINT_TYPE_EQUAL The constraint is of the form $e = 0$.

PPL_CONSTRAINT_TYPE_GREATER_OR_EQUAL The constraint is of the form $e \geq 0$.

PPL_CONSTRAINT_TYPE_GREATER_THAN The constraint is of the form $e > 0$.

Definition at line 1125 of file ppl_c.h.

8.6.3.5 enum ppl_enum_Generator_Type

Describes the different kinds of generators.

Enumerator:

PPL_GENERATOR_TYPE_LINE The generator is a line.

PPL_GENERATOR_TYPE_RAY The generator is a ray.

PPL_GENERATOR_TYPE_POINT The generator is a point.

PPL_GENERATOR_TYPE_CLOSURE_POINT The generator is a closure point.

Definition at line 1435 of file ppl_c.h.

8.6.3.6 enum ppl_enum_Grid_Generator_Type

Describes the different kinds of grid generators.

Enumerator:

PPL_GRID_GENERATOR_TYPE_LINE The grid generator is a line.

PPL_GRID_GENERATOR_TYPE_PARAMETER The grid generator is a parameter.

PPL_GRID_GENERATOR_TYPE_POINT The grid generator is a point.

Definition at line 2027 of file ppl_c.h.

8.6.4 Function Documentation

8.6.4.1 int ppl_io_asprint_variable (char ** *strp*, ppl_dimension_type *var*)

Pretty-prints *var* to a malloc-allocated string, a pointer to which is returned via *strp*.

Definition at line 2608 of file ppl_c_implementation_common.cc.

References Parma_Polyhedra_Library::Interfaces::C::c_variable_output_function, PPL_ERROR_OUT_OF_MEMORY, and PPL_STDIO_ERROR.

8.6.4.2 int ppl_io_fprint_variable (FILE * *stream*, ppl_dimension_type *var*)

Pretty-prints *var* to the given output *stream*.

Definition at line 2599 of file ppl_c_implementation_common.cc.

References Parma_Polyhedra_Library::Interfaces::C::c_variable_output_function, and PPL_STDIO_ERROR.

8.6.4.3 int ppl_io_get_variable_output_function (ppl_io_variable_output_function_type ** *pp*)

Writes a pointer to the current variable output function to *pp*.

Definition at line 2672 of file ppl_c_implementation_common.cc.

References Parma_Polyhedra_Library::Interfaces::C::c_variable_output_function.

8.6.4.4 int ppl_io_print_variable (ppl_dimension_type *var*)

Pretty-prints *var* to *stdout*.

Definition at line 2590 of file ppl_c_implementation_common.cc.

References Parma_Polyhedra_Library::Interfaces::C::c_variable_output_function, and PPL_STDIO_ERROR.

8.6.4.5 `int ppl_io_set_variable_output_function (ppl_io_variable_output_function_type * p)`

Sets the output function to be used for printing variables to `p`.

Definition at line 2664 of file `ppl_c_implementation_common.cc`.

References `Parma_Polyhedra_Library::Interfaces::C::c_variable_output_function`.

8.6.4.6 `char* ppl_io_wrap_string (const char * src, unsigned indent_depth, unsigned preferred_first_line_length, unsigned preferred_line_length)`

Utility function for the wrapping of lines of text.

Parameters

src The source string holding the text to wrap.

indent_depth The indentation depth.

preferred_first_line_length The preferred length for the first line of text.

preferred_line_length The preferred length for all the lines but the first one.

Returns

The wrapped string in a malloc-allocated buffer.

Definition at line 2653 of file `ppl_c_implementation_common.cc`.

8.6.4.7 `int ppl_max_space_dimension (ppl_dimension_type * m)`

Writes to `m` the maximum space dimension this library can handle.

Definition at line 383 of file `ppl_c_implementation_common.cc`.

8.6.4.8 `int ppl_not_a_dimension (ppl_dimension_type * m)`

Writes to `m` a value that does not designate a valid dimension.

Definition at line 390 of file `ppl_c_implementation_common.cc`.

8.6.5 Variable Documentation

8.6.5.1 `unsigned int PPL_COMPLEXITY_CLASS_ANY`

Code of the universal complexity class.

Definition at line 149 of file `ppl_c_implementation_common.cc`.

8.6.5.2 unsigned int PPL_COMPLEXITY_CLASS_POLYNOMIAL

Code of the worst-case polynomial complexity class.

Definition at line 147 of file `ppl_c_implementation_common.cc`.

8.6.5.3 unsigned int PPL_COMPLEXITY_CLASS_SIMPLEX

Code of the worst-case exponential but typically polynomial complexity class.

Definition at line 148 of file `ppl_c_implementation_common.cc`.

8.6.5.4 unsigned int PPL_POLY_CON_RELATION_IS_DISJOINT

Individual bit saying that the polyhedron and the set of points satisfying the constraint are disjoint.

Definition at line 140 of file `ppl_c_implementation_common.cc`.

8.6.5.5 unsigned int PPL_POLY_CON_RELATION_IS_INCLUDED

Individual bit saying that the polyhedron is included in the set of points satisfying the constraint.

Definition at line 142 of file `ppl_c_implementation_common.cc`.

8.6.5.6 unsigned int PPL_POLY_CON_RELATION_SATURATES

Individual bit saying that the polyhedron is included in the set of points saturating the constraint.

Definition at line 143 of file `ppl_c_implementation_common.cc`.

8.6.5.7 unsigned int PPL_POLY_CON_RELATION_STRICTLY_INTERSECTS

Individual bit saying that the polyhedron intersects the set of points satisfying the constraint, but it is not included in it.

Definition at line 141 of file `ppl_c_implementation_common.cc`.

8.6.5.8 unsigned int PPL_POLY_GEN_RELATION_SUBSUMES

Individual bit saying that adding the generator would not change the polyhedron.

Definition at line 145 of file `ppl_c_implementation_common.cc`.

10 Class Documentation

10.1 Parma_Polyhedra_Library::Interfaces::C::Array_Partial_Function_Wrapper Class Reference

A class to wrap an array of fixed length into a partial function interface suitable for the `map_space_dimension()` methods.

```
#include <ppl_c_implementation_common.defs.hh>
```

Public Member Functions

- [Array_Partial_Function_Wrapper](#) (dimension_type *v, size_t n)
Construct a partial function wrapping the first n positions of v.
- bool [has_empty_codomain](#) () const
Returns true if and only if the represented partial function has an empty codomain (i.e., it is always undefined).
- dimension_type [max_in_codomain](#) () const
Returns the maximum value that belongs to the codomain of the partial function.
- bool [maps](#) (dimension_type i, dimension_type &j) const
*Assigns to j the value associated to i by *this, if any.*

Private Attributes

- dimension_type * [vec](#)
Holds the vector implementing the map.
- size_t [vec_size](#)
Holds the size of vec.
- dimension_type [max_in_codomain_](#)
Cache for computing the maximum dimension in the codomain.
- int [empty](#)

10.1.1 Detailed Description

A class to wrap an array of fixed length into a partial function interface suitable for the `map_space_dimension()` methods.

Definition at line 60 of file `ppl_c_implementation_common.defs.hh`.

10.1.2 Constructor & Destructor Documentation

10.1.2.1 Parma_Polyhedra_Library::Interfaces::C::Array_Partial_Function_Wrapper::Array_Partial_Function_Wrapper (dimension_type * v, size_t n) [inline]

Construct a partial function wrapping the first n positions of v .

Definition at line 167 of file ppl_c_implementation_common.inlines.hh.

10.1.3 Member Function Documentation

10.1.3.1 bool Parma_Polyhedra_Library::Interfaces::C::Array_Partial_Function_Wrapper::has_empty_codomain () const [inline]

Returns `true` if and only if the represented partial function has an empty codomain (i.e., it is always undefined).

Definition at line 172 of file ppl_c_implementation_common.inlines.hh.

References `empty`, `vec`, and `vec_size`.

10.1.3.2 bool Parma_Polyhedra_Library::Interfaces::C::Array_Partial_Function_Wrapper::maps (dimension_type i, dimension_type & j) const [inline]

Assigns to j the value associated to i by `*this`, if any.

Let f be the function represented by `*this` and k be the value of i . If f is defined in k , then $f(k)$ is assigned to j and `true` is returned. If f is undefined in k , then `false` is returned.

Definition at line 199 of file ppl_c_implementation_common.inlines.hh.

References `vec`, and `vec_size`.

10.1.3.3 dimension_type Parma_Polyhedra_Library::Interfaces::C::Array_Partial_Function_Wrapper::max_in_codomain () const [inline]

Returns the maximum value that belongs to the codomain of the partial function.

Definition at line 185 of file ppl_c_implementation_common.inlines.hh.

References `max_in_codomain_`, `vec`, and `vec_size`.

10.1.4 Member Data Documentation

10.1.4.1 `int Parma_Polyhedra_Library::Interfaces::C::Array_Partial_Function_Wrapper::empty` [mutable, private]

Cache for computing emptiness: -1 if we still don't know, 0 if not empty, 1 if empty.

Definition at line 103 of file `ppl_c_implementation_common.defs.hh`.

Referenced by `has_empty_codomain()`.

10.1.4.2 `dimension_type Parma_Polyhedra_Library::Interfaces::C::Array_Partial_Function_Wrapper::max_in_codomain` [mutable, private]

Cache for computing the maximum dimension in the codomain.

Definition at line 99 of file `ppl_c_implementation_common.defs.hh`.

Referenced by `max_in_codomain()`.

10.1.4.3 `dimension_type* Parma_Polyhedra_Library::Interfaces::C::Array_Partial_Function_Wrapper::vec` [private]

Holds the vector implementing the map.

Definition at line 93 of file `ppl_c_implementation_common.defs.hh`.

Referenced by `has_empty_codomain()`, `maps()`, and `max_in_codomain()`.

10.1.4.4 `size_t Parma_Polyhedra_Library::Interfaces::C::Array_Partial_Function_Wrapper::vec_size` [private]

Holds the size of `vec`.

Definition at line 96 of file `ppl_c_implementation_common.defs.hh`.

Referenced by `has_empty_codomain()`, `maps()`, and `max_in_codomain()`.

The documentation for this class was generated from the following files:

- [ppl_c_implementation_common.defs.hh](#)
- [ppl_c_implementation_common.inlines.hh](#)

10.2 Parma_Polyhedra_Library::Interfaces::C::deterministic_timeout_exception Class Reference

```
#include <ppl_c_implementation_common.defs.hh>
```

Public Member Functions

- void [throw_me](#) () const
- int [priority](#) () const

10.2.1 Detailed Description

Definition at line 118 of file `ppl_c_implementation_common.defs.hh`.

10.2.2 Member Function Documentation**10.2.2.1 int Parma_Polyhedra_Library::Interfaces::C::deterministic_timeout_exception::priority () const [inline]**

Definition at line 124 of file `ppl_c_implementation_common.defs.hh`.

10.2.2.2 void Parma_Polyhedra_Library::Interfaces::C::deterministic_timeout_exception::throw_me () const [inline]

Definition at line 121 of file `ppl_c_implementation_common.defs.hh`.

The documentation for this class was generated from the following file:

- [ppl_c_implementation_common.defs.hh](#)

10.3 ppl_Artificial_Parameter_Sequence_const_iterator_tag Interface Reference

Types and functions for iterating on PIP artificial parameters.

```
#include <ppl_c.h>
```

Related Functions

(Note that these are not member functions.)

Constructors, Assignment and Destructor

- int [ppl_new_Artificial_Parameter_Sequence_const_iterator](#) (ppl_Artificial_Parameter_Sequence_const_iterator_t *p`apit`)
Builds a new 'const iterator' and writes a handle to it at address p`apit`.
- int [ppl_new_Artificial_Parameter_Sequence_const_iterator_from_Artificial_Parameter_Sequence_const_iterator](#) (ppl_Artificial_Parameter_Sequence_const_iterator_t *p`apit`, ppl_const_Artificial_Parameter_Sequence_const_iterator_t `apit`)
Builds a const iterator that is a copy of `apit`; writes a handle for the newly created const iterator at address p`apit`.

- `int ppl_assign_Artificial_Parameter_Sequence_const_iterator_from_Artificial_Parameter_Sequence_const_iterator` (`ppl_Artificial_Parameter_Sequence_const_iterator_t dst`, `ppl_const_Artificial_Parameter_Sequence_const_iterator_t src`)
Assigns a copy of the const iterator `src` to `dst`.
- `int ppl_delete_Artificial_Parameter_Sequence_const_iterator` (`ppl_const_Artificial_Parameter_Sequence_const_iterator_t apit`)
Invalidates the handle `apit`: this makes sure the corresponding resources will eventually be released.

Dereferencing, Incrementing and Equality Testing

- `int ppl_Artificial_Parameter_Sequence_const_iterator_dereference` (`ppl_const_Artificial_Parameter_Sequence_const_iterator_t apit`, `ppl_const_Artificial_Parameter_t *pap`)
Dereference `apit` writing a const handle to the resulting artificial parameter at address `pap`.
- `int ppl_Artificial_Parameter_Sequence_const_iterator_increment` (`ppl_Artificial_Parameter_Sequence_const_iterator_t apit`)
Increment `apit` so that it "points" to the next artificial parameter.
- `int ppl_Artificial_Parameter_Sequence_const_iterator_equal_test` (`ppl_const_Artificial_Parameter_Sequence_const_iterator_t x`, `ppl_const_Artificial_Parameter_Sequence_const_iterator_t y`)
Returns a positive integer if the iterators corresponding to `x` and `y` are equal; returns 0 if they are different.

10.3.1 Detailed Description

Types and functions for iterating on PIP artificial parameters.

10.3.2 Friends And Related Function Documentation

10.3.2.1 `int ppl_Artificial_Parameter_Sequence_const_iterator_dereference` (`ppl_const_Artificial_Parameter_Sequence_const_iterator_t apit`, `ppl_const_Artificial_Parameter_t *pap`) [**related**]

Dereference `apit` writing a const handle to the resulting artificial parameter at address `pap`.

Definition at line 2561 of file `ppl_c_implementation_common.cc`.

10.3.2.2 `int ppl_Artificial_Parameter_Sequence_const_iterator_equal_test` (`ppl_const_Artificial_Parameter_Sequence_const_iterator_t x`, `ppl_const_Artificial_Parameter_Sequence_const_iterator_t y`) [**related**]

Returns a positive integer if the iterators corresponding to `x` and `y` are equal; returns 0 if they are different.

Definition at line 2581 of file `ppl_c_implementation_common.cc`.

10.3.2.3 `int ppl_Artificial_Parameter_Sequence_const_iterator_increment` (`ppl_Artificial_Parameter_Sequence_const_iterator_t apit`) [**related**]

Increment `apit` so that it "points" to the next artificial parameter.

Definition at line 2572 of file `ppl_c_implementation_common.cc`.

10.3.2.4 `int ppl_assign_Artificial_Parameter_Sequence_const_iterator_from_Artificial_Parameter_Sequence_const_iterator` (`ppl_Artificial_Parameter_Sequence_const_iterator_t dst`, `ppl_const_Artificial_Parameter_Sequence_const_iterator_t src`) [**related**]

Assigns a copy of the const iterator `src` to `dst`.

Definition at line 2550 of file `ppl_c_implementation_common.cc`.

10.3.2.5 `int ppl_delete_Artificial_Parameter_Sequence_const_iterator` (`ppl_const_Artificial_Parameter_Sequence_const_iterator_t apit`) [**related**]

Invalidates the handle `apit`: this makes sure the corresponding resources will eventually be released.

Definition at line 2541 of file `ppl_c_implementation_common.cc`.

10.3.2.6 `int ppl_new_Artificial_Parameter_Sequence_const_iterator` (`ppl_Artificial_Parameter_Sequence_const_iterator_t * papit`) [**related**]

Builds a new 'const iterator' and writes a handle to it at address `papit`.

Definition at line 2524 of file `ppl_c_implementation_common.cc`.

10.3.2.7 `int ppl_new_Artificial_Parameter_Sequence_const_iterator_from_Artificial_Parameter_Sequence_const_iterator` (`ppl_Artificial_Parameter_Sequence_const_iterator_t * papit`, `ppl_const_Artificial_Parameter_Sequence_const_iterator_t apit`) [**related**]

Builds a const iterator that is a copy of `apit`; writes a handle for the newly created const iterator at address `papit`.

Definition at line 2532 of file `ppl_c_implementation_common.cc`.

The documentation for this interface was generated from the following file:

- [ppl_c.h](#)

10.4 ppl_Artificial_Parameter_tag Interface Reference

Types and functions for PIP artificial parameters.

```
#include <ppl_c.h>
```

Related Functions

(Note that these are not member functions.)

- `int ppl_Artificial_Parameter_get_Linear_Expression` (`ppl_const_Artificial_Parameter_t ap`, `ppl_Linear_Expression_t le`)
Copies into `le` the linear expression in artificial parameter `ap`.
- `int ppl_Artificial_Parameter_coefficient` (`ppl_const_Artificial_Parameter_t ap`, `ppl_dimension_type var`, `ppl_Coefficient_t n`)
Copies into `n` the coefficient of variable `var` in the artificial parameter `ap`.
- `int ppl_Artificial_Parameter_get_inhomogeneous_term` (`ppl_const_Artificial_Parameter_t ap`, `ppl_Coefficient_t n`)
Copies into `n` the inhomogeneous term of the artificial parameter `ap`.
- `int ppl_Artificial_Parameter_denominator` (`ppl_const_Artificial_Parameter_t ap`, `ppl_Coefficient_t n`)
Copies into `n` the denominator in artificial parameter `ap`.

10.4.1 Detailed Description

Types and functions for PIP artificial parameters. The types and functions for PIP artificial parameters provide an interface towards *Artificial_Parameter*.

10.4.2 Friends And Related Function Documentation

10.4.2.1 `int ppl_Artificial_Parameter_coefficient` (`ppl_const_Artificial_Parameter_t ap`, `ppl_dimension_type var`, `ppl_Coefficient_t n`) [related]

Copies into `n` the coefficient of variable `var` in the artificial parameter `ap`.

Definition at line 2488 of file `ppl_c_implementation_common.cc`.

10.4.2.2 `int ppl_Artificial_Parameter_denominator` (`ppl_const_Artificial_Parameter_t ap`, `ppl_Coefficient_t n`) [related]

Copies into `n` the denominator in artificial parameter `ap`.

Definition at line 2510 of file `ppl_c_implementation_common.cc`.

10.4.2.3 `int ppl_Artificial_Parameter_get_inhomogeneous_term` (`ppl_const_Artificial_Parameter_t ap`, `ppl_Coefficient_t n`) [related]

Copies into `n` the inhomogeneous term of the artificial parameter `ap`.

10.4.2.4 int ppl_Artificial_Parameter_get_Linear_Expression (ppl_const_Artificial_Parameter_t *ap*, ppl_Linear_Expression_t *le*) [related]

Copies into `le` the linear expression in artificial parameter `ap`.

Definition at line 2478 of file `ppl_c_implementation_common.cc`.

10.14 `ppl_Coefficient_tag` Interface Reference

Types and functions for coefficients.

```
#include <ppl_c.h>
```

Related Functions

(Note that these are not member functions.)

Constructors, Assignment and Destructor

- `int ppl_new_Coefficient` (`ppl_Coefficient_t *pc`)
Creates a new coefficient with value 0 and writes a handle for the newly created coefficient at address `pc`.
- `int ppl_new_Coefficient_from_mpz_t` (`ppl_Coefficient_t *pc`, `mpz_t z`)
Creates a new coefficient with the value given by the GMP integer `z` and writes a handle for the newly created coefficient at address `pc`.

- `int ppl_new_Coefficient_from_Coefficient (ppl_Coefficient_t *pc, ppl_const_Coefficient_t c)`
Builds a coefficient that is a copy of `c`; writes a handle for the newly created coefficient at address `pc`.
- `int ppl_assign_Coefficient_from_mpz_t (ppl_Coefficient_t dst, mpz_t z)`
Assign to `dst` the value given by the GMP integer `z`.
- `int ppl_assign_Coefficient_from_Coefficient (ppl_Coefficient_t dst, ppl_const_Coefficient_t src)`
Assigns a copy of the coefficient `src` to `dst`.
- `int ppl_delete_Coefficient (ppl_const_Coefficient_t c)`
Invalidates the handle `c`: this makes sure the corresponding resources will eventually be released.

Read-Only Accessor Functions

- `int ppl_Coefficient_to_mpz_t (ppl_const_Coefficient_t c, mpz_t z)`
Sets the value of the GMP integer `z` to the value of `c`.
- `int ppl_Coefficient_OK (ppl_const_Coefficient_t c)`
Returns a positive integer if `c` is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if `c` is broken. Useful for debugging purposes.
- `int ppl_Coefficient_is_bounded (void)`
Returns a positive integer if coefficients are bounded; returns 0 otherwise.
- `int ppl_Coefficient_min (mpz_t min)`
Returns a positive integer if coefficients are bounded, in which case `min` is set to their minimum value; returns 0 otherwise.
- `int ppl_Coefficient_max (mpz_t max)`
Returns a positive integer if coefficients are bounded, in which case `max` is set to their maximum value; returns 0 otherwise.

10.14.1 Detailed Description

Types and functions for coefficients. The types and functions for coefficients provide an interface towards *Coefficient*. Depending on configuration, the PPL coefficients may be implemented by the unbounded precision integers provided by GMP (default), or by bounded precision integers (with checks for overflows).

10.14.2 Friends And Related Function Documentation

10.14.2.1 `int ppl_assign_Coefficient_from_Coefficient (ppl_Coefficient_t dst, ppl_const_Coefficient_t src)` [related]

Assigns a copy of the coefficient `src` to `dst`.

Definition at line 442 of file `ppl_c_implementation_common.cc`.

10.14.2.2 int ppl_assign_Coefficient_from_mpz_t (ppl_Coefficient_t *dst*, mpz_t *z*) [related]

Assign to *dst* the value given by the GMP integer *z*.

Definition at line 434 of file `ppl_c_implementation_common.cc`.

10.14.2.3 int ppl_Coefficient_is_bounded (void) [related]

Returns a positive integer if coefficients are bounded; returns 0 otherwise.

Definition at line 458 of file `ppl_c_implementation_common.cc`.

10.14.2.4 int ppl_Coefficient_max (mpz_t *max*) [related]

Returns a positive integer if coefficients are bounded, in which case *max* is set to their maximum value; returns 0 otherwise.

Definition at line 477 of file `ppl_c_implementation_common.cc`.

10.14.2.5 int ppl_Coefficient_min (mpz_t *min*) [related]

Returns a positive integer if coefficients are bounded, in which case *min* is set to their minimum value; returns 0 otherwise.

Definition at line 464 of file `ppl_c_implementation_common.cc`.

10.14.2.6 int ppl_Coefficient_OK (ppl_const_Coefficient_t *c*) [related]

Returns a positive integer if *c* is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if *c* is broken. Useful for debugging purposes.

Definition at line 452 of file `ppl_c_implementation_common.cc`.

10.14.2.7 int ppl_Coefficient_to_mpz_t (ppl_const_Coefficient_t *c*, mpz_t *z*) [related]

Sets the value of the GMP integer *z* to the value of *c*.

Definition at line 420 of file `ppl_c_implementation_common.cc`.

10.14.2.8 int ppl_delete_Coefficient (ppl_const_Coefficient_t *c*) [related]

Invalidates the handle *c*: this makes sure the corresponding resources will eventually be released.

Definition at line 427 of file ppl_c_implementation_common.cc.

10.14.2.9 int ppl_new_Coefficient (ppl_Coefficient_t * pc) [related]

Creates a new coefficient with value 0 and writes a handle for the newly created coefficient at address pc.

Definition at line 397 of file ppl_c_implementation_common.cc.

10.14.2.10 int ppl_new_Coefficient_from_Coefficient (ppl_Coefficient_t * pc, ppl_const_Coefficient_t c) [related]

Builds a coefficient that is a copy of c; writes a handle for the newly created coefficient at address pc.

Definition at line 411 of file ppl_c_implementation_common.cc.

10.14.2.11 int ppl_new_Coefficient_from_mpz_t (ppl_Coefficient_t * pc, mpz_t z) [related]

Creates a new coefficient with the value given by the GMP integer z and writes a handle for the newly created coefficient at address pc.

Definition at line 404 of file ppl_c_implementation_common.cc.

The documentation for this interface was generated from the following file:

- [ppl_c.h](#)

10.15 ppl_Congruence_System_const_iterator_tag Interface Reference

Types and functions for iterating on congruence systems.

```
#include <ppl_c.h>
```

Related Functions

(Note that these are not member functions.)

Constructors, Assignment and Destructor

- int [ppl_new_Congruence_System_const_iterator](#) (ppl_Congruence_System_const_iterator_t * pcit)
Builds a new 'const iterator' and writes a handle to it at address pcit.
- int [ppl_new_Congruence_System_const_iterator_from_Congruence_System_const_iterator](#) (ppl_Congruence_System_const_iterator_t * pcit, ppl_const_Congruence_System_const_iterator_t cit)
Builds a const iterator that is a copy of cit; writes a handle for the newly created const iterator at address pcit.

- `int ppl_assign_Congruence_System_const_iterator_from_Congruence_System_const_iterator` (`ppl_Congruence_System_const_iterator_t dst`, `ppl_const_Congruence_System_const_iterator_t src`)
Assigns a copy of the const iterator `src` to `dst`.
- `int ppl_delete_Congruence_System_const_iterator` (`ppl_const_Congruence_System_const_iterator_t cit`)
Invalidates the handle `cit`: this makes sure the corresponding resources will eventually be released.

Dereferencing, Incrementing and Equality Testing

- `int ppl_Congruence_System_const_iterator_dereference` (`ppl_const_Congruence_System_const_iterator_t cit`, `ppl_const_Congruence_t *pc`)
Dereference `cit` writing a const handle to the resulting congruence at address `pc`.
- `int ppl_Congruence_System_const_iterator_increment` (`ppl_Congruence_System_const_iterator_t cit`)
Increment `cit` so that it "points" to the next congruence.
- `int ppl_Congruence_System_const_iterator_equal_test` (`ppl_const_Congruence_System_const_iterator_t x`, `ppl_const_Congruence_System_const_iterator_t y`)
Returns a positive integer if the iterators corresponding to `x` and `y` are equal; returns 0 if they are different.

10.15.1 Detailed Description

Types and functions for iterating on congruence systems. The types and functions for congruence systems iterators provide read-only access to the elements of a congruence system by interfacing `Congruence_System::const_iterator`.

10.15.2 Friends And Related Function Documentation

10.15.2.1 `int ppl_assign_Congruence_System_const_iterator_from_Congruence_System_const_iterator` (`ppl_Congruence_System_const_iterator_t dst`, `ppl_const_Congruence_System_const_iterator_t src`) [**related**]

Assigns a copy of the const iterator `src` to `dst`.

Definition at line 1496 of file `ppl_c_implementation_common.cc`.

10.15.2.2 `int ppl_Congruence_System_const_iterator_dereference` (`ppl_const_Congruence_System_const_iterator_t cit`, `ppl_const_Congruence_t *pc`) [**related**]

Dereference `cit` writing a const handle to the resulting congruence at address `pc`.

Definition at line 1527 of file `ppl_c_implementation_common.cc`.

10.15.2.3 `int ppl_Congruence_System_const_iterator_equal_test (ppl_const_Congruence_System_const_iterator_t x, ppl_const_Congruence_System_const_iterator_t y)` **[related]**

Returns a positive integer if the iterators corresponding to `x` and `y` are equal; returns 0 if they are different.
Definition at line 1547 of file `ppl_c_implementation_common.cc`.

10.15.2.4 `int ppl_Congruence_System_const_iterator_increment (ppl_Congruence_System_const_iterator_t cit)` **[related]**

Increment `cit` so that it "points" to the next congruence.
Definition at line 1538 of file `ppl_c_implementation_common.cc`.

10.15.2.5 `int ppl_delete_Congruence_System_const_iterator (ppl_const_Congruence_System_const_iterator_t cit)` **[related]**

Invalidates the handle `cit`: this makes sure the corresponding resources will eventually be released.
Definition at line 1487 of file `ppl_c_implementation_common.cc`.

10.15.2.6 `int ppl_new_Congruence_System_const_iterator (ppl_Congruence_System_const_iterator_t * pcit)` **[related]**

Builds a new 'const iterator' and writes a handle to it at address `pcit`.
Definition at line 1470 of file `ppl_c_implementation_common.cc`.

10.15.2.7 `int ppl_new_Congruence_System_const_iterator_from_Congruence_System_const_iterator (ppl_Congruence_System_const_iterator_t * pcit, ppl_const_Congruence_System_const_iterator_t cit)` **[related]**

Builds a const iterator that is a copy of `cit`; writes a handle for the newly created const iterator at address `pcit`.

Definition at line 1478 of file `ppl_c_implementation_common.cc`.

The documentation for this interface was generated from the following file:

- [ppl_c.h](#)

10.16 ppl_Congruence_System_tag Interface Reference

Types and functions for congruence systems.

```
#include <ppl_c.h>
```

Related Functions

(Note that these are not member functions.)

Constructors, Assignment and Destructor

- `int ppl_new_Congruence_System (ppl_Congruence_System_t *pcs)`
Builds an empty system of congruences and writes a handle to it at address `pcs`.
- `int ppl_new_Congruence_System_zero_dim_empty (ppl_Congruence_System_t *pcs)`
Builds a zero-dimensional, unsatisfiable congruence system and writes a handle to it at address `pcs`.
- `int ppl_new_Congruence_System_from_Congruence (ppl_Congruence_System_t *pcs, ppl_Const_Congruence_t c)`
Builds the singleton congruence system containing only a copy of congruence `c`; writes a handle for the newly created system at address `pcs`.
- `int ppl_new_Congruence_System_from_Congruence_System (ppl_Congruence_System_t *pcs, ppl_Const_Congruence_System_t cs)`
Builds a congruence system that is a copy of `cs`; writes a handle for the newly created system at address `pcs`.
- `int ppl_assign_Congruence_System_from_Congruence_System (ppl_Congruence_System_t dst, ppl_Const_Congruence_System_t src)`
Assigns a copy of the congruence system `src` to `dst`.
- `int ppl_delete_Congruence_System (ppl_Const_Congruence_System_t cs)`
Invalidates the handle `cs`: this makes sure the corresponding resources will eventually be released.

Functions that Do Not Modify the Congruence System

- `int ppl_Congruence_System_space_dimension (ppl_Const_Congruence_System_t cs, ppl_Dimension_type *m)`
Writes to `m` the dimension of the vector space enclosing `cs`.
- `int ppl_Congruence_System_empty (ppl_Const_Congruence_System_t cs)`
Returns a positive integer if `cs` contains no (non-trivial) congruence; returns 0 otherwise.
- `int ppl_Congruence_System_begin (ppl_Const_Congruence_System_t cs, ppl_Congruence_System_Const_iterator_t cit)`
Assigns to `cit` a const iterator "pointing" to the beginning of the congruence system `cs`.
- `int ppl_Congruence_System_end (ppl_Const_Congruence_System_t cs, ppl_Congruence_System_Const_iterator_t cit)`
Assigns to `cit` a const iterator "pointing" past the end of the congruence system `cs`.
- `int ppl_Congruence_System_OK (ppl_Const_Congruence_System_t cs)`
Returns a positive integer if `cs` is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if `cs` is broken. Useful for debugging purposes.

Functions that May Modify the Congruence System

- `int ppl_Congruence_System_clear (ppl_Congruence_System_t cs)`

Removes all the congruences from the congruence system `cs` and sets its space dimension to 0.

- `int ppl_Congruence_System_insert_Congruence (ppl_Congruence_System_t cs, ppl_const_Congruence_t c)`
Inserts a copy of the congruence `c` into `cs`; the space dimension is increased, if necessary.

10.16.1 Detailed Description

Types and functions for congruence systems. The types and functions for congruence systems provide an interface towards *Congruence_System*.

10.16.2 Friends And Related Function Documentation

10.16.2.1 `int ppl_assign_Congruence_System_from_Congruence_System (ppl_Congruence_System_t dst, ppl_const_Congruence_System_t src)` [related]

Assigns a copy of the congruence system `src` to `dst`.

Definition at line 1419 of file `ppl_c_implementation_common.cc`.

10.16.2.2 `int ppl_Congruence_System_begin (ppl_const_Congruence_System_t cs, ppl_Congruence_System_const_iterator_t cit)` [related]

Assigns to `cit` a const iterator "pointing" to the beginning of the congruence system `cs`.

Definition at line 1506 of file `ppl_c_implementation_common.cc`.

10.16.2.3 `int ppl_Congruence_System_clear (ppl_Congruence_System_t cs)` [related]

Removes all the congruences from the congruence system `cs` and sets its space dimension to 0.

Definition at line 1444 of file `ppl_c_implementation_common.cc`.

10.16.2.4 `int ppl_Congruence_System_empty (ppl_const_Congruence_System_t cs)` [related]

Returns a positive integer if `cs` contains no (non-trivial) congruence; returns 0 otherwise.

Definition at line 1437 of file `ppl_c_implementation_common.cc`.

10.16.2.5 `int ppl_Congruence_System_end (ppl_const_Congruence_System_t cs, ppl_Congruence_System_const_iterator_t cit)` [related]

Assigns to `cit` a const iterator "pointing" past the end of the congruence system `cs`.

Definition at line 1516 of file `ppl_c_implementation_common.cc`.

10.16.2.6 `int ppl_Congruence_System_insert_Congruence (ppl_Congruence_System_t cs, ppl_const_Congruence_t c) [related]`

Inserts a copy of the congruence `c` into `cs`; the space dimension is increased, if necessary.

Definition at line 1451 of file `ppl_c_implementation_common.cc`.

10.16.2.7 `int ppl_Congruence_System_OK (ppl_const_Congruence_System_t cs) [related]`

Returns a positive integer if `cs` is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if `cs` is broken. Useful for debugging purposes.

Definition at line 1461 of file `ppl_c_implementation_common.cc`.

10.16.2.8 `int ppl_Congruence_System_space_dimension (ppl_const_Congruence_System_t cs, ppl_dimension_type * m) [related]`

Writes to `m` the dimension of the vector space enclosing `cs`.

Definition at line 1428 of file `ppl_c_implementation_common.cc`.

10.16.2.9 `int ppl_delete_Congruence_System (ppl_const_Congruence_System_t cs) [related]`

Invalidates the handle `cs`: this makes sure the corresponding resources will eventually be released.

Definition at line 1411 of file `ppl_c_implementation_common.cc`.

10.16.2.10 `int ppl_new_Congruence_System (ppl_Congruence_System_t * pcs) [related]`

Builds an empty system of congruences and writes a handle to it at address `pcs`.

Definition at line 1377 of file `ppl_c_implementation_common.cc`.

10.16.2.11 `int ppl_new_Congruence_System_from_Congruence (ppl_Congruence_System_t * pcs, ppl_const_Congruence_t c) [related]`

Builds the singleton congruence system containing only a copy of congruence `c`; writes a handle for the newly created system at address `pcs`.

Definition at line 1393 of file `ppl_c_implementation_common.cc`.

10.16.2.12 `int ppl_new_Congruence_System_from_Congruence_System` `(ppl_Congruence_System_t * pcs, ppl_const_Congruence_System_t cs)` **[related]**

Builds a congruence system that is a copy of `cs`; writes a handle for the newly created system at address `pcs`.

Definition at line 1403 of file `ppl_c_implementation_common.cc`.

10.16.2.13 `int ppl_new_Congruence_System_zero_dim_empty` `(ppl_Congruence_System_t * pcs)` **[related]**

Builds a zero-dimensional, unsatisfiable congruence system and writes a handle to it at address `pcs`.

Definition at line 1384 of file `ppl_c_implementation_common.cc`.

The documentation for this interface was generated from the following file:

- [ppl_c.h](#)

10.17 ppl_Congruence_tag Interface Reference

Types and functions for congruences.

```
#include <ppl_c.h>
```

Related Functions

(Note that these are not member functions.)

Constructors, Assignment and Destructor

- `int ppl_new_Congruence` `(ppl_Congruence_t * pc, ppl_const_Linear_Expression_t le, ppl_const_Coefficient_t m)`
Creates the new congruence $le = 0 \pmod m$ and writes a handle for it at address `pc`. The space dimension of the new congruence is equal to the space dimension of `le`.
- `int ppl_new_Congruence_zero_dim_false` `(ppl_Congruence_t * pc)`
Creates the unsatisfiable (zero-dimension space) congruence $0 = 1 \pmod 0$ and writes a handle for it at address `pc`.
- `int ppl_new_Congruence_zero_dim_integrity` `(ppl_Congruence_t * pc)`
Creates the true (zero-dimension space) congruence $0 = 1 \pmod 1$, also known as integrity congruence. A handle for the newly created congruence is written at address `pc`.
- `int ppl_new_Congruence_from_Congruence` `(ppl_Congruence_t * pc, ppl_const_Congruence_t c)`
Builds a congruence that is a copy of `c`; writes a handle for the newly created congruence at address `pc`.
- `int ppl_assign_Congruence_from_Congruence` `(ppl_Congruence_t dst, ppl_const_Congruence_t src)`

Assigns a copy of the congruence `src` to `dst`.

- `int ppl_delete_Congruence (ppl_const_Congruence_t c)`
Invalidates the handle `c`: this makes sure the corresponding resources will eventually be released.

Functions that Do Not Modify the Congruence

- `int ppl_Congruence_space_dimension (ppl_const_Congruence_t c, ppl_dimension_type *m)`
Writes to `m` the space dimension of `c`.
- `int ppl_Congruence_coefficient (ppl_const_Congruence_t c, ppl_dimension_type var, ppl_Coefficient_t n)`
Copies into `n` the coefficient of variable `var` in congruence `c`.
- `int ppl_Congruence_inhomogeneous_term (ppl_const_Congruence_t c, ppl_Coefficient_t n)`
Copies into `n` the inhomogeneous term of congruence `c`.
- `int ppl_Congruence_modulus (ppl_const_Congruence_t c, ppl_Coefficient_t m)`
Copies into `m` the modulus of congruence `c`.
- `int ppl_Congruence_OK (ppl_const_Congruence_t c)`
Returns a positive integer if `c` is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if `c` is broken. Useful for debugging purposes.

10.17.1 Detailed Description

Types and functions for congruences. The types and functions for congruences provide an interface towards *Congruence*.

10.17.2 Friends And Related Function Documentation

10.17.2.1 `int ppl_assign_Congruence_from_Congruence (ppl_Congruence_t dst, ppl_const_Congruence_t src)` [related]

Assigns a copy of the congruence `src` to `dst`.

Definition at line 1311 of file `ppl_c_implementation_common.cc`.

10.17.2.2 `int ppl_Congruence_coefficient (ppl_const_Congruence_t c, ppl_dimension_type var, ppl_Coefficient_t n)` [related]

Copies into `n` the coefficient of variable `var` in congruence `c`.

Definition at line 1329 of file `ppl_c_implementation_common.cc`.

10.17.2.3 `int ppl_Congruence_inhomogeneous_term (ppl_const_Congruence_t c, ppl_Coefficient_t n) [related]`

Copies into `n` the inhomogeneous term of congruence `c`.

Definition at line 1340 of file `ppl_c_implementation_common.cc`.

10.17.2.4 `int ppl_Congruence_modulus (ppl_const_Congruence_t c, ppl_Coefficient_t m) [related]`

Copies into `m` the modulus of congruence `c`.

Definition at line 1350 of file `ppl_c_implementation_common.cc`.

10.17.2.5 `int ppl_Congruence_OK (ppl_const_Congruence_t c) [related]`

Returns a positive integer if `c` is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if `c` is broken. Useful for debugging purposes.

Definition at line 1360 of file `ppl_c_implementation_common.cc`.

10.17.2.6 `int ppl_Congruence_space_dimension (ppl_const_Congruence_t c, ppl_dimension_type * m) [related]`

Writes to `m` the space dimension of `c`.

Definition at line 1321 of file `ppl_c_implementation_common.cc`.

10.17.2.7 `int ppl_delete_Congruence (ppl_const_Congruence_t c) [related]`

Invalidates the handle `c`: this makes sure the corresponding resources will eventually be released.

Definition at line 1304 of file `ppl_c_implementation_common.cc`.

10.17.2.8 `int ppl_new_Congruence (ppl_Congruence_t * pc, ppl_const_Linear_Expression_t le, ppl_const_Coefficient_t m) [related]`

Creates the new congruence $le = 0 \pmod{m}$ and writes a handle for it at address `pc`. The space dimension of the new congruence is equal to the space dimension of `le`.

Definition at line 1268 of file `ppl_c_implementation_common.cc`.

10.17.2.9 `int ppl_new_Congruence_from_Congruence (ppl_Congruence_t * pc, ppl_const_Congruence_t c) [related]`

Builds a congruence that is a copy of `c`; writes a handle for the newly created congruence at address `pc`.

Definition at line 1295 of file `ppl_c_implementation_common.cc`.

10.17.2.10 `int ppl_new_Congruence_zero_dim_false (ppl_Congruence_t * pc) [related]`

Creates the unsatisfiable (zero-dimension space) congruence $0 = 1 \pmod{0}$ and writes a handle for it at address `pc`.

Definition at line 1281 of file `ppl_c_implementation_common.cc`.

10.17.2.11 `int ppl_new_Congruence_zero_dim_integrality (ppl_Congruence_t * pc) [related]`

Creates the true (zero-dimension space) congruence $0 = 1 \pmod{1}$, also known as *integrality congruence*. A handle for the newly created congruence is written at address `pc`.

Definition at line 1288 of file `ppl_c_implementation_common.cc`.

The documentation for this interface was generated from the following file:

- [ppl_c.h](#)

10.18 `ppl_Constraint_System_const_iterator_tag` Interface Reference

Types and functions for iterating on constraint systems.

```
#include <ppl_c.h>
```

Related Functions

(Note that these are not member functions.)

Constructors, Assignment and Destructor

- `int ppl_new_Constraint_System_const_iterator (ppl_Constraint_System_const_iterator_t * pcit)`
Builds a new ‘const iterator’ and writes a handle to it at address `pcit`.
- `int ppl_new_Constraint_System_const_iterator_from_Constraint_System_const_iterator (ppl_Constraint_System_const_iterator_t * pcit, ppl_const_Constraint_System_const_iterator_t cit)`
Builds a const iterator that is a copy of `cit`; writes a handle for the newly created const iterator at address `pcit`.
- `int ppl_assign_Constraint_System_const_iterator_from_Constraint_System_const_iterator (ppl_Constraint_System_const_iterator_t dst, ppl_const_Constraint_System_const_iterator_t src)`
Assigns a copy of the const iterator `src` to `dst`.

- int `ppl_delete_Constraint_System_const_iterator` (`ppl_const_Constraint_System_const_iterator_t cit`)

Invalidates the handle `cit`: this makes sure the corresponding resources will eventually be released.

Dereferencing, Incrementing and Equality Testing

- int `ppl_Constraint_System_const_iterator_dereference` (`ppl_const_Constraint_System_const_iterator_t cit`, `ppl_const_Constraint_t *pc`)

Dereference `cit` writing a const handle to the resulting constraint at address `pc`.

- int `ppl_Constraint_System_const_iterator_increment` (`ppl_Constraint_System_const_iterator_t cit`)

Increment `cit` so that it "points" to the next constraint.

- int `ppl_Constraint_System_const_iterator_equal_test` (`ppl_const_Constraint_System_const_iterator_t x`, `ppl_const_Constraint_System_const_iterator_t y`)

Returns a positive integer if the iterators corresponding to `x` and `y` are equal; returns 0 if they are different.

10.18.1 Detailed Description

Types and functions for iterating on constraint systems. The types and functions for constraint systems iterators provide read-only access to the elements of a constraint system by interfacing `Constraint_System::const_iterator`.

10.18.2 Friends And Related Function Documentation

10.18.2.1 int ppl_assign_Constraint_System_const_iterator_from_Constraint_System_const_iterator (`ppl_Constraint_System_const_iterator_t dst`, `ppl_const_Constraint_System_const_iterator_t src`) [related]

Assigns a copy of the const iterator `src` to `dst`.

Definition at line 895 of file `ppl_c_implementation_common.cc`.

10.18.2.2 int ppl_Constraint_System_const_iterator_dereference (`ppl_const_Constraint_System_const_iterator_t cit`, `ppl_const_Constraint_t *pc`) [related]

Dereference `cit` writing a const handle to the resulting constraint at address `pc`.

Definition at line 926 of file `ppl_c_implementation_common.cc`.

10.18.2.3 int ppl_Constraint_System_const_iterator_equal_test (`ppl_const_Constraint_System_const_iterator_t x`, `ppl_const_Constraint_System_const_iterator_t y`) [related]

Returns a positive integer if the iterators corresponding to `x` and `y` are equal; returns 0 if they are different.

Definition at line 946 of file `ppl_c_implementation_common.cc`.

10.18.2.4 `int ppl_Constraint_System_const_iterator_increment (ppl_Constraint_System_const_iterator_t cit)` **[related]**

Increment `cit` so that it "points" to the next constraint.

Definition at line 937 of file `ppl_c_implementation_common.cc`.

10.18.2.5 `int ppl_delete_Constraint_System_const_iterator (ppl_const_Constraint_System_const_iterator_t cit)` **[related]**

Invalidates the handle `cit`: this makes sure the corresponding resources will eventually be released.

Definition at line 886 of file `ppl_c_implementation_common.cc`.

10.18.2.6 `int ppl_new_Constraint_System_const_iterator (ppl_Constraint_System_const_iterator_t * pcit)` **[related]**

Builds a new 'const iterator' and writes a handle to it at address `pcit`.

Definition at line 869 of file `ppl_c_implementation_common.cc`.

10.18.2.7 `int ppl_new_Constraint_System_const_iterator_from_Constraint_System_const_iterator (ppl_Constraint_System_const_iterator_t * pcit, ppl_const_Constraint_System_const_iterator_t cit)` **[related]**

Builds a const iterator that is a copy of `cit`; writes a handle for the newly created const iterator at address `pcit`.

Definition at line 877 of file `ppl_c_implementation_common.cc`.

The documentation for this interface was generated from the following file:

- [ppl_c.h](#)

10.19 `ppl_Constraint_System_tag` Interface Reference

Types and functions for constraint systems.

```
#include <ppl_c.h>
```

Related Functions

(Note that these are not member functions.)

Constructors, Assignment and Destructor

- `int ppl_new_Constraint_System (ppl_Constraint_System_t *pcs)`
Builds an empty system of constraints and writes a handle to it at address `pcs`.
- `int ppl_new_Constraint_System_zero_dim_empty (ppl_Constraint_System_t *pcs)`
Builds a zero-dimensional, unsatisfiable constraint system and writes a handle to it at address `pcs`.
- `int ppl_new_Constraint_System_from_Constraint (ppl_Constraint_System_t *pcs, ppl_const_Constraint_t c)`
Builds the singleton constraint system containing only a copy of constraint `c`; writes a handle for the newly created system at address `pcs`.
- `int ppl_new_Constraint_System_from_Constraint_System (ppl_Constraint_System_t *pcs, ppl_Constraint_System_t cs)`
Builds a constraint system that is a copy of `cs`; writes a handle for the newly created system at address `pcs`.
- `int ppl_assign_Constraint_System_from_Constraint_System (ppl_Constraint_System_t dst, ppl_Constraint_System_t src)`
Assigns a copy of the constraint system `src` to `dst`.
- `int ppl_delete_Constraint_System (ppl_Constraint_System_t cs)`
Invalidates the handle `cs`: this makes sure the corresponding resources will eventually be released.

Functions that Do Not Modify the Constraint System

- `int ppl_Constraint_System_space_dimension (ppl_Constraint_System_t cs, ppl_Constraint_System_dimension_type *m)`
Writes to `m` the dimension of the vector space enclosing `cs`.
- `int ppl_Constraint_System_empty (ppl_Constraint_System_t cs)`
Returns a positive integer if `cs` contains no (non-trivial) constraint; returns 0 otherwise.
- `int ppl_Constraint_System_has_strict_inequalities (ppl_Constraint_System_t cs)`
Returns a positive integer if `cs` contains any (non-trivial) strict inequality; returns 0 otherwise.
- `int ppl_Constraint_System_begin (ppl_Constraint_System_t cs, ppl_Constraint_System_iterator_t cit)`
Assigns to `cit` a const iterator "pointing" to the beginning of the constraint system `cs`.
- `int ppl_Constraint_System_end (ppl_Constraint_System_t cs, ppl_Constraint_System_iterator_t cit)`
Assigns to `cit` a const iterator "pointing" past the end of the constraint system `cs`.
- `int ppl_Constraint_System_OK (ppl_Constraint_System_t cs)`
Returns a positive integer if `cs` is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if `cs` is broken. Useful for debugging purposes.

Functions that May Modify the Constraint System

- `int ppl_Constraint_System_clear (ppl_Constraint_System_t cs)`
Removes all the constraints from the constraint system `cs` and sets its space dimension to 0.

- `int ppl_Constraint_System_insert_Constraint (ppl_Constraint_System_t cs, ppl_const_Constraint_t c)`

Inserts a copy of the constraint `c` into `cs`; the space dimension is increased, if necessary.

10.19.1 Detailed Description

Types and functions for constraint systems. The types and functions for constraint systems provide an interface towards *Constraint_System*.

10.19.2 Friends And Related Function Documentation

10.19.2.1 `int ppl_assign_Constraint_System_from_Constraint_System (ppl_Constraint_System_t dst, ppl_const_Constraint_System_t src)` [related]

Assigns a copy of the constraint system `src` to `dst`.

Definition at line 810 of file `ppl_c_implementation_common.cc`.

10.19.2.2 `int ppl_Constraint_System_begin (ppl_const_Constraint_System_t cs, ppl_Constraint_System_const_iterator_t cit)` [related]

Assigns to `cit` a const iterator "pointing" to the beginning of the constraint system `cs`.

Definition at line 905 of file `ppl_c_implementation_common.cc`.

10.19.2.3 `int ppl_Constraint_System_clear (ppl_Constraint_System_t cs)` [related]

Removes all the constraints from the constraint system `cs` and sets its space dimension to 0.

Definition at line 843 of file `ppl_c_implementation_common.cc`.

10.19.2.4 `int ppl_Constraint_System_empty (ppl_const_Constraint_System_t cs)` [related]

Returns a positive integer if `cs` contains no (non-trivial) constraint; returns 0 otherwise.

Definition at line 828 of file `ppl_c_implementation_common.cc`.

10.19.2.5 `int ppl_Constraint_System_end (ppl_const_Constraint_System_t cs, ppl_Constraint_System_const_iterator_t cit)` [related]

Assigns to `cit` a const iterator "pointing" past the end of the constraint system `cs`.

Definition at line 915 of file `ppl_c_implementation_common.cc`.

10.19.2.6 int ppl_Constraint_System_has_strict_inequalities (ppl_const_Constraint_System_t cs) [related]

Returns a positive integer if `cs` contains any (non-trivial) strict inequality; returns 0 otherwise.

Definition at line 836 of file `ppl_c_implementation_common.cc`.

10.19.2.7 int ppl_Constraint_System_insert_Constraint (ppl_Constraint_System_t cs, ppl_const_Constraint_t c) [related]

Inserts a copy of the constraint `c` into `cs`; the space dimension is increased, if necessary.

Definition at line 850 of file `ppl_c_implementation_common.cc`.

10.19.2.8 int ppl_Constraint_System_OK (ppl_const_Constraint_System_t cs) [related]

Returns a positive integer if `cs` is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if `cs` is broken. Useful for debugging purposes.

Definition at line 860 of file `ppl_c_implementation_common.cc`.

10.19.2.9 int ppl_Constraint_System_space_dimension (ppl_const_Constraint_System_t cs, ppl_dimension_type * m) [related]

Writes to `m` the dimension of the vector space enclosing `cs`.

Definition at line 819 of file `ppl_c_implementation_common.cc`.

10.19.2.10 int ppl_delete_Constraint_System (ppl_const_Constraint_System_t cs) [related]

Invalidates the handle `cs`: this makes sure the corresponding resources will eventually be released.

Definition at line 802 of file `ppl_c_implementation_common.cc`.

10.19.2.11 int ppl_new_Constraint_System (ppl_Constraint_System_t * pcs) [related]

Builds an empty system of constraints and writes a handle to it at address `pcs`.

Definition at line 768 of file `ppl_c_implementation_common.cc`.

10.19.2.12 int ppl_new_Constraint_System_from_Constraint (ppl_Constraint_System_t * pcs, ppl_const_Constraint_t c) [related]

Builds the singleton constraint system containing only a copy of constraint `c`; writes a handle for the newly created system at address `pcs`.

Definition at line 784 of file `ppl_c_implementation_common.cc`.

10.19.2.13 `int ppl_new_Constraint_System_from_Constraint_System (ppl_Constraint_System_t * pcs, ppl_const_Constraint_System_t cs)` **[related]**

Builds a constraint system that is a copy of `cs`; writes a handle for the newly created system at address `pcs`.

Definition at line 794 of file `ppl_c_implementation_common.cc`.

10.19.2.14 `int ppl_new_Constraint_System_zero_dim_empty (ppl_Constraint_System_t * pcs)` **[related]**

Builds a zero-dimensional, unsatisfiable constraint system and writes a handle to it at address `pcs`.

Definition at line 775 of file `ppl_c_implementation_common.cc`.

The documentation for this interface was generated from the following file:

- [ppl_c.h](#)

10.20 ppl_Constraint_tag Interface Reference

Types and functions for constraints.

```
#include <ppl_c.h>
```

Related Functions

(Note that these are not member functions.)

Constructors, Assignment and Destructor

- `int ppl_new_Constraint (ppl_Constraint_t *pc, ppl_const_Linear_Expression_t le, enum ppl_enum_Constraint_Type rel)`
Creates the new constraint '`le rel 0`' and writes a handle for it at address `pc`. The space dimension of the new constraint is equal to the space dimension of `le`.
- `int ppl_new_Constraint_zero_dim_false (ppl_Constraint_t *pc)`
Creates the unsatisfiable (zero-dimension space) constraint $0 = 1$ and writes a handle for it at address `pc`.
- `int ppl_new_Constraint_zero_dim_positivity (ppl_Constraint_t *pc)`
Creates the true (zero-dimension space) constraint $0 \leq 1$, also known as positivity constraint. A handle for the newly created constraint is written at address `pc`.
- `int ppl_new_Constraint_from_Constraint (ppl_Constraint_t *pc, ppl_const_Constraint_t c)`
Builds a constraint that is a copy of `c`; writes a handle for the newly created constraint at address `pc`.

- `int ppl_assign_Constraint_from_Constraint (ppl_Constraint_t dst, ppl_const_Constraint_t src)`
Assigns a copy of the constraint `src` to `dst`.
- `int ppl_delete_Constraint (ppl_const_Constraint_t c)`
Invalidates the handle `c`: this makes sure the corresponding resources will eventually be released.

Functions that Do Not Modify the Constraint

- `int ppl_Constraint_space_dimension (ppl_const_Constraint_t c, ppl_dimension_type *m)`
Writes to `m` the space dimension of `c`.
- `int ppl_Constraint_type (ppl_const_Constraint_t c)`
Returns the type of constraint `c`.
- `int ppl_Constraint_coefficient (ppl_const_Constraint_t c, ppl_dimension_type var, ppl_Coefficient_t n)`
Copies into `n` the coefficient of variable `var` in constraint `c`.
- `int ppl_Constraint_inhomogeneous_term (ppl_const_Constraint_t c, ppl_Coefficient_t n)`
Copies into `n` the inhomogeneous term of constraint `c`.
- `int ppl_Constraint_OK (ppl_const_Constraint_t c)`
Returns a positive integer if `c` is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if `c` is broken. Useful for debugging purposes.

10.20.1 Detailed Description

Types and functions for constraints. The types and functions for constraints provide an interface towards *Constraint*.

10.20.2 Friends And Related Function Documentation

10.20.2.1 `int ppl_assign_Constraint_from_Constraint (ppl_Constraint_t dst, ppl_const_Constraint_t src)` [related]

Assigns a copy of the constraint `src` to `dst`.

Definition at line 697 of file `ppl_c_implementation_common.cc`.

10.20.2.2 `int ppl_Constraint_coefficient (ppl_const_Constraint_t c, ppl_dimension_type var, ppl_Coefficient_t n)` [related]

Copies into `n` the coefficient of variable `var` in constraint `c`.

Definition at line 730 of file `ppl_c_implementation_common.cc`.

10.20.2.3 `int ppl_Constraint_inhomogeneous_term (ppl_const_Constraint_t c, ppl_Coefficient_t n)` **[related]**

Copies into `n` the inhomogeneous term of constraint `c`.

Definition at line 741 of file `ppl_c_implementation_common.cc`.

10.20.2.4 `int ppl_Constraint_OK (ppl_const_Constraint_t c)` **[related]**

Returns a positive integer if `c` is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if `c` is broken. Useful for debugging purposes.

Definition at line 751 of file `ppl_c_implementation_common.cc`.

10.20.2.5 `int ppl_Constraint_space_dimension (ppl_const_Constraint_t c, ppl_dimension_type * m)` **[related]**

Writes to `m` the space dimension of `c`.

Definition at line 707 of file `ppl_c_implementation_common.cc`.

10.20.2.6 `int ppl_Constraint_type (ppl_const_Constraint_t c)` **[related]**

Returns the type of constraint `c`.

Definition at line 715 of file `ppl_c_implementation_common.cc`.

10.20.2.7 `int ppl_delete_Constraint (ppl_const_Constraint_t c)` **[related]**

Invalidates the handle `c`: this makes sure the corresponding resources will eventually be released.

Definition at line 690 of file `ppl_c_implementation_common.cc`.

10.20.2.8 `int ppl_new_Constraint (ppl_Constraint_t * pc, ppl_const_Linear_Expression_t le, enum ppl_enum_Constraint_Type rel)` **[related]**

Creates the new constraint '`le rel 0`' and writes a handle for it at address `pc`. The space dimension of the new constraint is equal to the space dimension of `le`.

Definition at line 636 of file `ppl_c_implementation_common.cc`.

10.20.2.9 int ppl_new_Constraint_from_Constraint (ppl_Constraint_t * pc, ppl_const_Constraint_t c) [related]

Builds a constraint that is a copy of `c`; writes a handle for the newly created constraint at address `pc`.

Definition at line 681 of file `ppl_c_implementation_common.cc`.

10.20.2.10 int ppl_new_Constraint_zero_dim_false (ppl_Constraint_t * pc) [related]

Creates the unsatisfiable (zero-dimension space) constraint $0 = 1$ and writes a handle for it at address `pc`.

Definition at line 667 of file `ppl_c_implementation_common.cc`.

10.20.2.11 int ppl_new_Constraint_zero_dim_positivity (ppl_Constraint_t * pc) [related]

Creates the true (zero-dimension space) constraint $0 \leq 1$, also known as *positivity constraint*. A handle for the newly created constraint is written at address `pc`.

Definition at line 674 of file `ppl_c_implementation_common.cc`.

The documentation for this interface was generated from the following file:

- [ppl_c.h](#)

10.21 ppl_Constraints_Product_C_Polyhedron_Grid_tag Interface Reference

Types and functions for [ppl_Constraints_Product_C_Polyhedron_Grid_tag](#).

10.23.1 Detailed Description

Types and functions for `ppl_Constraints_Product_Grid_NNC_Polyhedron_tag`.

10.23.2 Friends And Related Function Documentation

- 10.23.2.1** `int ppl_Constraints_Product_Grid_NNC_Polyhedron_add_congruence` (`ppl_Constraints_Product_Grid_NNC_Polyhedron_t ph`, `ppl_const_Congruence_t c`)
[related]
- 10.23.2.2** `int ppl_Constraints_Product_Grid_NNC_Polyhedron_add_congruences` (`ppl_Constraints_Product_Grid_NNC_Polyhedron_t ph`, `ppl_const_Congruence_System_t cs`) [related]
- 10.23.2.3** `int ppl_Constraints_Product_Grid_NNC_Polyhedron_add_constraint` (`ppl_Constraints_Product_Grid_NNC_Polyhedron_t ph`, `ppl_const_Constraint_t c`)
[related]
- 10.23.2.4** `int ppl_Constraints_Product_Grid_NNC_Polyhedron_add_constraints` (`ppl_Constraints_Product_Grid_NNC_Polyhedron_t ph`, `ppl_const_Constraint_System_t cs`)
[related]
- 10.23.2.5** `int ppl_Constraints_Product_Grid_NNC_Polyhedron_add_space_dimensions_and_embed` (`ppl_Constraints_Product_Grid_NNC_Polyhedron_t ph`, `ppl_dimension_type d`)
[related]

- 10.23.2.6** `int ppl_Constraints_Product_Grid_NNC_Polyhedron_add_space_dimensions_and_project (ppl_Constraints_Product_Grid_NNC_Polyhedron_t ph, ppl_dimension_type d)` `[related]`
- 10.23.2.7** `int ppl_Constraints_Product_Grid_NNC_Polyhedron_affine_dimension (ppl_const_Constraints_Product_Grid_NNC_Polyhedron_t ph, ppl_dimension_type *m)` `[related]`
- 10.23.2.8** `int ppl_Constraints_Product_Grid_NNC_Polyhedron_affine_image (ppl_Constraints_Product_Grid_NNC_Polyhedron_t ph, ppl_dimension_type var, ppl_const_Linear_Expression_t le, ppl_const_Coefficient_t d)` `[related]`
- 10.23.2.9** `int ppl_Constraints_Product_Grid_NNC_Polyhedron_affine_preimage (ppl_Constraints_Product_Grid_NNC_Polyhedron_t ph, ppl_dimension_type var, ppl_const_Linear_Expression_t le, ppl_const_Coefficient_t d)` `[related]`
- 10.23.2.10** `int ppl_Constraints_Product_Grid_NNC_Polyhedron_bounded_affine_image (ppl_Constraints_Product_Grid_NNC_Polyhedron_t ph, ppl_dimension_type var, ppl_const_Linear_Expression_t lb, ppl_const_Linear_Expression_t ub, ppl_const_Coefficient_t d)` `[related]`
- 10.23.2.11** `int ppl_Constraints_Product_Grid_NNC_Polyhedron_bounded_affine_preimage (ppl_Constraints_Product_Grid_NNC_Polyhedron_t ph, ppl_dimension_type var, ppl_const_Linear_Expression_t lb, ppl_const_Linear_Expression_t ub, ppl_const_Coefficient_t d)` `[related]`
- 10.23.2.12** `int ppl_Constraints_Product_Grid_NNC_Polyhedron_bounds_from_above (ppl_const_Constraints_Product_Grid_NNC_Polyhedron_t ph, ppl_const_Linear_Expression_t le)` `[related]`
- 10.23.2.13** `int ppl_Constraints_Product_Grid_NNC_Polyhedron_bounds_from_below (ppl_const_Constraints_Product_Grid_NNC_Polyhedron_t ph, ppl_const_Linear_Expression_t le)` `[related]`

- 10.23.2.14** `int ppl_Constraints_Product_Grid_NNC_Polyhedron_concatenate_-
assign (ppl_Constraints_Product_Grid_NNC_Polyhedron_t x,
ppl_const_Constraints_Product_Grid_NNC_Polyhedron_t y)` [**related**]
- 10.23.2.15** `int ppl_Constraints_Product_Grid_NNC_Polyhedron_constrains
(ppl_Constraints_Product_Grid_NNC_Polyhedron_t ph, ppl_dimension_type var)`
[**related**]
- 10.23.2.16** `int ppl_Constraints_Product_Grid_NNC_Polyhedron_contains_Constraints_Product_-
Grid_NNC_Polyhedron (ppl_const_Constraints_Product_Grid_NNC_Polyhedron_t x,
ppl_const_Constraints_Product_Grid_NNC_Polyhedron_t y)` [**related**]
- 10.23.2.17** `int ppl_Constraints_Product_Grid_NNC_Polyhedron_difference_-
assign (ppl_Constraints_Product_Grid_NNC_Polyhedron_t x,
ppl_const_Constraints_Product_Grid_NNC_Polyhedron_t y)` [**related**]
- 10.23.2.18** `int ppl_Constraints_Product_Grid_NNC_Polyhedron_drop_some_non_integer_points
(ppl_Constraints_Product_Grid_NNC_Polyhedron_t ph, int complexity)` [**related**]
- 10.23.2.19** `int ppl_Constraints_Product_Grid_NNC_Polyhedron_drop_some_non_integer_-
points_2 (ppl_Constraints_Product_Grid_NNC_Polyhedron_t ph, ppl_dimension_type
ds[], size_t n, int complexity)` [**related**]
- 10.23.2.20** `int ppl_Constraints_Product_Grid_NNC_Polyhedron_equals_Constraints_Product_-
Grid_NNC_Polyhedron (ppl_const_Constraints_Product_Grid_NNC_Polyhedron_t x,
ppl_const_Constraints_Product_Grid_NNC_Polyhedron_t y)` [**related**]
- 10.23.2.21** `int ppl_Constraints_Product_Grid_NNC_Polyhedron_expand_space_dimension
(ppl_Constraints_Product_Grid_NNC_Polyhedron_t ph, ppl_dimension_type d,
ppl_dimension_type m)` [**related**]

10.23.2.22 `int ppl_Constraints_Product_Grid_NNC_Polyhedron_external_memory_in_bytes`
 (`ppl_const_Constraints_Product_Grid_NNC_Polyhedron_t ps`, `size_t * sz`)
 [related]

10.23.2.23 `int ppl_Constraints_Product_Grid_NNC_Polyhedron_fold_space_dimensions`
 (`ppl_Constraints_Product_Grid_NNC_Polyhedron_t ph`, `ppl_dimension_type ds[]`,
`size_t n`, `ppl_dimension_type d`) [related]

10.23.2.24 `int ppl_Constraints_Product_Grid_NNC_Polyhedron_generalized_affine_image`
 (`ppl_Constraints_Product_Grid_NNC_Polyhedron_t ph`, `ppl_dimension_type var`,
`enum ppl_enum_Constraint_Type relsym`, `ppl_const_Linear_Expression_t le`,
`ppl_const_Coefficient_t d`) [related]

10.23.2.25 `int ppl_Constraints_Product_Grid_NNC_Polyhedron_generalized_affine_-`
`image_lhs_rhs` (`ppl_Constraints_Product_Grid_NNC_Polyhedron_t ph`,
`ppl_const_Linear_Expression_t lhs`, `enum ppl_enum_Constraint_Type relsym`,

10.26.1 Detailed Description

Types and functions for [ppl_Float_Box_tag](#).

10.26.2 Friends And Related Function Documentation

10.26.2.1 `int ppl_all_affine_ranking_functions_MS_Float_Box (ppl_const_Float_Box_t pset,
ppl_Polyhedron_t ph)` [**related**]

10.26.2.2 `int ppl_all_affine_ranking_functions_MS_Float_Box_2 (ppl_const_Float_Box_t
pset_before, ppl_const_Float_Box_t pset_after, ppl_Polyhedron_t ph)` [**related**]

10.26.2.3 `int ppl_all_affine_ranking_functions_PR_Float_Box (ppl_const_Float_Box_t pset,
ppl_Polyhedron_t ph)` [**related**]

10.26.2.4 `int ppl_all_affine_ranking_functions_PR_Float_Box_2 (ppl_const_Float_Box_t
pset_before, ppl_const_Float_Box_t pset_after, ppl_Polyhedron_t ph)` [**related**]

10.26.2.5 `int ppl_assign_Float_Box_from_Float_Box (ppl_Float_Box_t dst,
ppl_const_Float_Box_t src)` [**related**]

10.26.2.6 `int ppl_delete_Float_Box (ppl_const_Float_Box_t ph)` [**related**]

10.26.2.7 `int ppl_Float_Box_add_congruence (ppl_Float_Box_t ph, ppl_const_Congruence_t c)`
[**related**]

10.26.2.8 `int ppl_Float_Box_add_congruences (ppl_Float_Box_t ph,
ppl_const_Congruence_System_t cs)` [**related**]

10.26.2.9 `int ppl_Float_Box_add_constraint (ppl_Float_Box_t ph, ppl_const_Constraint_t c)`
[**related**]

- 10.26.2.10 `int ppl_Float_Box_add_constraints (ppl_Float_Box_t ph,

The documentation for this interface was generated from the following file:

- [ppl_c.h](#)

10.27 ppl_Generator_System_const_iterator_tag Interface Reference

Types and functions for iterating on generator systems.

```
#include <ppl_c.h>
```

Related Functions

(Note that these are not member functions.)

Constructors, Assignment and Destructor

- `int ppl_new_Generator_System_const_iterator (ppl_Generator_System_const_iterator_t *pgit)`
Builds a new 'const iterator' and writes a handle to it at address `pgit`.
- `int ppl_new_Generator_System_const_iterator_from_Generator_System_const_iterator (ppl_Generator_System_const_iterator_t *pgit, ppl_const_Generator_System_const_iterator_t git)`
Builds a const iterator that is a copy of `git`; writes a handle for the newly created const iterator at address `pgit`.
- `int ppl_assign_Generator_System_const_iterator_from_Generator_System_const_iterator (ppl_Generator_System_const_iterator_t dst, ppl_const_Generator_System_const_iterator_t src)`
Assigns a copy of the const iterator `src` to `dst`.
- `int ppl_delete_Generator_System_const_iterator (ppl_const_Generator_System_const_iterator_t git)`
Invalidates the handle `git`: this makes sure the corresponding resources will eventually be released.

Dereferencing, Incrementing and Equality Testing

- `int ppl_Generator_System_const_iterator_dereference (ppl_const_Generator_System_const_iterator_t git, ppl_const_Generator_t *pg)`
Dereference `git` writing a const handle to the resulting generator at address `pg`.
- `int ppl_Generator_System_const_iterator_increment (ppl_Generator_System_const_iterator_t git)`
Increment `git` so that it "points" to the next generator.
- `int ppl_Generator_System_const_iterator_equal_test (ppl_const_Generator_System_const_iterator_t x, ppl_const_Generator_System_const_iterator_t y)`
Returns a positive integer if the iterators corresponding to `x` and `y` are equal; returns 0 if they are different.

10.27.1 Detailed Description

Types and functions for iterating on generator systems. The types and functions for generator systems iterators provide read-only access to the elements of a generator system by interfacing `Generator_System::const_iterator`.

10.27.2 Friends And Related Function Documentation

10.27.2.1 `int ppl_assign_Generator_System_const_iterator_from_Generator_System_const_iterator (ppl_Generator_System_const_iterator_t dst, ppl_const_Generator_System_const_iterator_t src) [related]`

Assigns a copy of the const iterator `src` to `dst`.

Definition at line 1206 of file `ppl_c_implementation_common.cc`.

10.27.2.2 `int ppl_delete_Generator_System_const_iterator (ppl_const_Generator_System_const_iterator_t git) [related]`

Invalidates the handle `git`: this makes sure the corresponding resources will eventually be released.

Definition at line 1198 of file `ppl_c_implementation_common.cc`.

10.27.2.3 `int ppl_Generator_System_const_iterator_dereference (ppl_const_Generator_System_const_iterator_t git, ppl_const_Generator_t * pg) [related]`

Dereference `git` writing a const handle to the resulting generator at address `pg`.

Definition at line 1237 of file `ppl_c_implementation_common.cc`.

10.27.2.4 `int ppl_Generator_System_const_iterator_equal_test (ppl_const_Generator_System_const_iterator_t x, ppl_const_Generator_System_const_iterator_t y) [related]`

Returns a positive integer if the iterators corresponding to `x` and `y` are equal; returns 0 if they are different.

Definition at line 1257 of file `ppl_c_implementation_common.cc`.

10.27.2.5 `int ppl_Generator_System_const_iterator_increment (ppl_Generator_System_const_iterator_t git) [related]`

Increment `git` so that it "points" to the next generator.

Definition at line 1248 of file `ppl_c_implementation_common.cc`.

10.27.2.6 `int ppl_new_Generator_System_const_iterator (ppl_Generator_System_const_iterator_t * pgit) [related]`

Builds a new 'const iterator' and writes a handle to it at address `pgit`.

Definition at line 1181 of file ppl_c_implementation_common.cc.

10.27.2.7 `int ppl_new_Generator_System_const_iterator_from_Generator_System_const_iterator (ppl_Generator_System_const_iterator_t * pgit, ppl_const_Generator_System_const_iterator_t git) [related]`

Builds a const iterator that is a copy of `git`; writes a handle for the newly created const iterator at address `pgit`.

Definition at line 1189 of file ppl_c_implementation_common.cc.

The documentation for this interface was generated from the following file:

- [ppl_c.h](#)

10.28 ppl_Generator_System_tag Interface Reference

Types and functions for generator systems.

```
#include <ppl_c.h>
```

Related Functions

(Note that these are not member functions.)

Constructors, Assignment and Destructor

- `int ppl_new_Generator_System (ppl_Generator_System_t *pgs)`
Builds an empty system of generators and writes a handle to it at address `pgs`.
- `int ppl_new_Generator_System_from_Generator (ppl_Generator_System_t *pgs, ppl_const_Generator_t g)`
Builds the singleton generator system containing only a copy of generator `g`; writes a handle for the newly created system at address `pgs`.
- `int ppl_new_Generator_System_from_Generator_System (ppl_Generator_System_t *pgs, ppl_const_Generator_System_t gs)`
Builds a generator system that is a copy of `gs`; writes a handle for the newly created system at address `pgs`.
- `int ppl_assign_Generator_System_from_Generator_System (ppl_Generator_System_t dst, ppl_const_Generator_System_t src)`
Assigns a copy of the generator system `src` to `dst`.
- `int ppl_delete_Generator_System (ppl_const_Generator_System_t gs)`
Invalidates the handle `gs`: this makes sure the corresponding resources will eventually be released.

Functions that Do Not Modify the Generator System

- `int ppl_Generator_System_space_dimension (ppl_const_Generator_System_t gs, ppl_dimension_type *m)`

Writes to `m` the dimension of the vector space enclosing `gs`.

- `int ppl_Generator_System_empty (ppl_const_Generator_System_t gs)`
Returns a positive integer if `gs` contains no generators; returns 0 otherwise.
- `int ppl_Generator_System_begin (ppl_const_Generator_System_t gs, ppl_Generator_System_const_iterator_t git)`
Assigns to `git` a const iterator "pointing" to the beginning of the generator system `gs`.
- `int ppl_Generator_System_end (ppl_const_Generator_System_t gs, ppl_Generator_System_const_iterator_t git)`
Assigns to `git` a const iterator "pointing" past the end of the generator system `gs`.
- `int ppl_Generator_System_OK (ppl_const_Generator_System_t gs)`
Returns a positive integer if `gs` is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if `gs` is broken. Useful for debugging purposes.

Functions that May Modify the Generator System

- `int ppl_Generator_System_clear (ppl_Generator_System_t gs)`
Removes all the generators from the generator system `gs` and sets its space dimension to 0.
- `int ppl_Generator_System_insert_Generator (ppl_Generator_System_t gs, ppl_const_Generator_t g)`
Inserts a copy of the generator `g` into `gs`; the space dimension is increased, if necessary.

10.28.1 Detailed Description

Types and functions for generator systems. The types and functions for generator systems provide an interface towards *Generator_System*.

10.28.2 Friends And Related Function Documentation

10.28.2.1 `int ppl_assign_Generator_System_from_Generator_System (ppl_Generator_System_t dst, ppl_const_Generator_System_t src)` [related]

Assigns a copy of the generator system `src` to `dst`.

Definition at line 1130 of file `ppl_c_implementation_common.cc`.

10.28.2.2 `int ppl_delete_Generator_System (ppl_const_Generator_System_t gs)` [related]

Invalidates the handle `gs`: this makes sure the corresponding resources will eventually be released.

Definition at line 1122 of file `ppl_c_implementation_common.cc`.

10.28.2.3 `int ppl_Generator_System_begin (ppl_const_Generator_System_t gs, ppl_Generator_System_const_iterator_t git)` **[related]**

Assigns to `git` a const iterator "pointing" to the beginning of the generator system `gs`.

Definition at line 1216 of file `ppl_c_implementation_common.cc`.

10.28.2.4 `int ppl_Generator_System_clear (ppl_Generator_System_t gs)` **[related]**

Removes all the generators from the generator system `gs` and sets its space dimension to 0.

Definition at line 1155 of file `ppl_c_implementation_common.cc`.

10.28.2.5 `int ppl_Generator_System_empty (ppl_const_Generator_System_t gs)` **[related]**

Returns a positive integer if `gs` contains no generators; returns 0 otherwise.

Definition at line 1148 of file `ppl_c_implementation_common.cc`.

10.28.2.6 `int ppl_Generator_System_end (ppl_const_Generator_System_t gs, ppl_Generator_System_const_iterator_t git)` **[related]**

Assigns to `git` a const iterator "pointing" past the end of the generator system `gs`.

Definition at line 1226 of file `ppl_c_implementation_common.cc`.

10.28.2.7 `int ppl_Generator_System_insert_Generator (ppl_Generator_System_t gs, ppl_const_Generator_t g)` **[related]**

Inserts a copy of the generator `g` into `gs`; the space dimension is increased, if necessary.

Definition at line 1162 of file `ppl_c_implementation_common.cc`.

10.28.2.8 `int ppl_Generator_System_OK (ppl_const_Generator_System_t gs)` **[related]**

Returns a positive integer if `gs` is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if `gs` is broken. Useful for debugging purposes.

Definition at line 1172 of file `ppl_c_implementation_common.cc`.

10.28.2.9 `int ppl_Generator_System_space_dimension (ppl_const_Generator_System_t gs, ppl_dimension_type * m)` **[related]**

Writes to `m` the dimension of the vector space enclosing `gs`.

Definition at line 1139 of file `ppl_c_implementation_common.cc`.

10.28.2.10 `int ppl_new_Generator_System (ppl_Generator_System_t * pgs) [related]`

Builds an empty system of generators and writes a handle to it at address `pgs`.

Definition at line 1090 of file `ppl_c_implementation_common.cc`.

10.28.2.11 `int ppl_new_Generator_System_from_Generator (ppl_Generator_System_t * pgs, ppl_const_Generator_t g) [related]`

Builds the singleton generator system containing only a copy of generator `g`; writes a handle for the newly created system at address `pgs`.

Definition at line 1104 of file `ppl_c_implementation_common.cc`.

10.28.2.12 `int ppl_new_Generator_System_from_Generator_System (ppl_Generator_System_t * pgs, ppl_const_Generator_System_t gs) [related]`

Builds a generator system that is a copy of `gs`; writes a handle for the newly created system at address `pgs`.

Definition at line 1114 of file `ppl_c_implementation_common.cc`.

The documentation for this interface was generated from the following file:

- [ppl_c.h](#)

10.29 `ppl_Generator_tag` Interface Reference

Types and functions for generators.

```
#include <ppl_c.h>
```

Related Functions

(Note that these are not member functions.)

Constructors, Assignment and Destructor

- `int ppl_new_Generator (ppl_Generator_t *pg, ppl_const_Linear_Expression_t le, enum ppl_enum_Generator_Type t, ppl_const_Coefficient_t d)`

Creates a new generator of direction `le` and type `t`. If the generator to be created is a point or a closure point, the divisor `d` is applied to `le`. For other types of generators `d` is simply disregarded. A handle for the new generator is written at address `pg`. The space dimension of the new generator is equal to the space dimension of `le`.

- `int ppl_new_Generator_zero_dim_point (ppl_Generator_t *pg)`
Creates the point that is the origin of the zero-dimensional space $\mathbb{R}^0$. Writes a handle for the new generator at address pg.
- `int ppl_new_Generator_zero_dim_closure_point (ppl_Generator_t *pg)`
Creates, as a closure point, the point that is the origin of the zero-dimensional space $\mathbb{R}^0$. Writes a handle for the new generator at address pg.
- `int ppl_new_Generator_from_Generator (ppl_Generator_t *pg, ppl_const_Generator_t g)`
Builds a generator that is a copy of g; writes a handle for the newly created generator at address pg.
- `int ppl_assign_Generator_from_Generator (ppl_Generator_t dst, ppl_const_Generator_t src)`
Assigns a copy of the generator src to dst.
- `int ppl_delete_Generator (ppl_const_Generator_t g)`
Invalidates the handle g: this makes sure the corresponding resources will eventually be released.

Functions that Do Not Modify the Generator

- `int ppl_Generator_space_dimension (ppl_const_Generator_t g, ppl_dimension_type *m)`
Writes to m the space dimension of g.
- `int ppl_Generator_type (ppl_const_Generator_t g)`
Returns the type of generator g.
- `int ppl_Generator_coefficient (ppl_const_Generator_t g, ppl_dimension_type var, ppl_Coefficient_t n)`
Copies into n the coefficient of variable var in generator g.
- `int ppl_Generator_divisor (ppl_const_Generator_t g, ppl_Coefficient_t n)`
If g is a point or a closure point assigns its divisor to n.
- `int ppl_Generator_OK (ppl_const_Generator_t g)`
Returns a positive integer if g is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if g is broken. Useful for debugging purposes.

10.29.1 Detailed Description

Types and functions for generators. The types and functions for generators provide an interface towards *Generator*.

10.29.2 Friends And Related Function Documentation

10.29.2.1 `int ppl_assign_Generator_from_Generator (ppl_Generator_t dst, ppl_const_Generator_t src)` [related]

Assigns a copy of the generator src to dst.

Definition at line 1017 of file ppl_c_implementation_common.cc.

10.29.2.2 `int ppl_delete_Generator (ppl_const_Generator_t g) [related]`

Invalidates the handle `g`: this makes sure the corresponding resources will eventually be released.

Definition at line 1010 of file `ppl_c_implementation_common.cc`.

10.29.2.3 `int ppl_Generator_coefficient (ppl_const_Generator_t g, ppl_dimension_type var, ppl_Coefficient_t n) [related]`

Copies into `n` the coefficient of variable `var` in generator `g`.

Definition at line 1052 of file `ppl_c_implementation_common.cc`.

10.29.2.4 `int ppl_Generator_divisor (ppl_const_Generator_t g, ppl_Coefficient_t n) [related]`

If `g` is a point or a closure point assigns its divisor to `n`.

Definition at line 1063 of file `ppl_c_implementation_common.cc`.

10.29.2.5 `int ppl_Generator_OK (ppl_const_Generator_t g) [related]`

Returns a positive integer if `g` is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if `g` is broken. Useful for debugging purposes.

Definition at line 1073 of file `ppl_c_implementation_common.cc`.

10.29.2.6 `int ppl_Generator_space_dimension (ppl_const_Generator_t g, ppl_dimension_type * m) [related]`

Writes to `m` the space dimension of `g`.

Definition at line 1027 of file `ppl_c_implementation_common.cc`.

10.29.2.7 `int ppl_Generator_type (ppl_const_Generator_t g) [related]`

Returns the type of generator `g`.

Definition at line 1035 of file `ppl_c_implementation_common.cc`.

10.29.2.8 `int ppl_new_Generator (ppl_Generator_t * pg, ppl_const_Linear_Expression_t le, enum ppl_enum_Generator_Type t, ppl_const_Coefficient_t d) [related]`

Creates a new generator of direction le and type t . If the generator to be created is a point or a closure point, the divisor d is applied to le . For other types of generators d is simply disregarded. A handle for the new generator is written at address pg . The space dimension of the new generator is equal to the space dimension of le .

Definition at line 957 of file `ppl_c_implementation_common.cc`.

10.29.2.9 `int ppl_new_Generator_from_Generator (ppl_Generator_t *pg, ppl_const_Generator_t g) [related]`

Builds a generator that is a copy of g ; writes a handle for the newly created generator at address pg .

Definition at line 1001 of file `ppl_c_implementation_common.cc`.

10.29.2.10 `int ppl_new_Generator_zero_dim_closure_point (ppl_Generator_t *pg) [related]`

Creates, as a closure point, the point that is the origin of the zero-dimensional space $\mathbb{R}^0$. Writes a handle for the new generator at address pg .

Definition at line 994 of file `ppl_c_implementation_common.cc`.

10.29.2.11 `int ppl_new_Generator_zero_dim_point (ppl_Generator_t *pg) [related]`

Creates the point that is the origin of the zero-dimensional space $\mathbb{R}^0$. Writes a handle for the new generator at address pg .

Definition at line 987 of file `ppl_c_implementation_common.cc`.

The documentation for this interface was generated from the following file:

10.30 ppl_Grid_Generator_System_const_iterator_tag Interface Reference

Types and functions for iterating on grid generator systems.

```
#include <ppl_c.h>
```

Related Functions

(Note that these are not member functions.)

Constructors, Assignment and Destructor

- `int ppl_new_Grid_Generator_System_const_iterator (ppl_Grid_Generator_System_const_iterator_t *pgit)`

Builds a new 'const iterator' and writes a handle to it at address $pgit$.

- `int ppl_new_Grid_Generator_System_const_iterator_from_Grid_Generator_System_const_iterator` (`ppl_Grid_Generator_System_const_iterator_t *pgit`, `ppl_const_Grid_Generator_System_const_iterator_t git`)
Builds a const iterator that is a copy of `git`; writes a handle for the newly created const iterator at address `pgit`.
- `int ppl_assign_Grid_Generator_System_const_iterator_from_Grid_Generator_System_const_iterator` (`ppl_Grid_Generator_System_const_iterator_t dst`, `ppl_const_Grid_Generator_System_const_iterator_t src`)
Assigns a copy of the const iterator `src` to `dst`.
- `int ppl_delete_Grid_Generator_System_const_iterator` (`ppl_const_Grid_Generator_System_const_iterator_t git`)
Invalidates the handle `git`: this makes sure the corresponding resources will eventually be released.

Dereferencing, Incrementing and Equality Testing

- `int ppl_Grid_Generator_System_const_iterator_dereference` (`ppl_const_Grid_Generator_System_const_iterator_t git`, `ppl_const_Grid_Generator_t *pg`)
Dereference `git` writing a const handle to the resulting grid generator at address `pg`.
- `int ppl_Grid_Generator_System_const_iterator_increment` (`ppl_Grid_Generator_System_const_iterator_t git`)
Increment `git` so that it "points" to the next grid generator.
- `int ppl_Grid_Generator_System_const_iterator_equal_test` (`ppl_const_Grid_Generator_System_const_iterator_t x`, `ppl_const_Grid_Generator_System_const_iterator_t y`)
Returns a positive integer if the iterators corresponding to `x` and `y` are equal; returns 0 if they are different.

10.30.1 Detailed Description

Types and functions for iterating on grid generator systems. The types and functions for grid generator systems iterators provide read-only access to the elements of a grid generator system by interfacing `Grid_Generator_System::const_iterator`.

10.30.2 Friends And Related Function Documentation

10.30.2.1 `int ppl_assign_Grid_Generator_System_const_iterator_from_Grid_Generator_System_const_iterator` (`ppl_Grid_Generator_System_const_iterator_t dst`, `ppl_const_Grid_Generator_System_const_iterator_t src`) [**related**]

Assigns a copy of the const iterator `src` to `dst`.

Definition at line 1802 of file `ppl_c_implementation_common.cc`.

10.30.2.2 `int ppl_delete_Grid_Generator_System_const_iterator` (`ppl_const_Grid_Generator_System_const_iterator_t git`) [**related**]

Invalidates the handle `git`: this makes sure the corresponding resources will eventually be released.

Definition at line 1794 of file `ppl_c_implementation_common.cc`.

10.30.2.3 `int ppl_Grid_Generator_System_const_iterator_dereference (ppl_const_Grid_Generator_System_const_iterator_t git, ppl_const_Grid_Generator_t * pg) [related]`

Dereference `git` writing a const handle to the resulting grid generator at address `pg`.

Definition at line 1835 of file `ppl_c_implementation_common.cc`.

10.30.2.4 `int ppl_Grid_Generator_System_const_iterator_equal_test (ppl_const_Grid_Generator_System_const_iterator_t x, ppl_const_Grid_Generator_System_const_iterator_t y) [related]`

Returns a positive integer if the iterators corresponding to `x` and `y` are equal; returns 0 if they are different.

Definition at line 1855 of file `ppl_c_implementation_common.cc`.

10.30.2.5 `int ppl_Grid_Generator_System_const_iterator_increment (ppl_Grid_Generator_System_const_iterator_t git) [related]`

Increment `git` so that it "points" to the next grid generator.

Definition at line 1846 of file `ppl_c_implementation_common.cc`.

10.30.2.6 `int ppl_new_Grid_Generator_System_const_iterator (ppl_Grid_Generator_System_const_iterator_t * pgit) [related]`

Builds a new 'const iterator' and writes a handle to it at address `pgit`.

Definition at line 1776 of file `ppl_c_implementation_common.cc`.

10.30.2.7 `int ppl_new_Grid_Generator_System_const_iterator_from_Grid_Generator_System_const_iterator (ppl_Grid_Generator_System_const_iterator_t * pgit, ppl_const_Grid_Generator_System_const_iterator_t git) [related]`

Builds a const iterator that is a copy of `git`; writes a handle for the newly created const iterator at address `pgit`.

Definition at line 1784 of file `ppl_c_implementation_common.cc`.

The documentation for this interface was generated from the following file:

10.31 ppl_Grid_Generator_System_tag Interface Reference

Types and functions for grid generator systems.

```
#include <ppl_c.h>
```

Related Functions

(Note that these are not member functions.)

Constructors, Assignment and Destructor

- `int ppl_new_Grid_Generator_System (ppl_Grid_Generator_System_t *pgs)`
Builds an empty system of grid generators and writes a handle to it at address pgs.
- `int ppl_new_Grid_Generator_System_from_Grid_Generator (ppl_Grid_Generator_System_t *pgs, ppl_const_Grid_Generator_t g)`
Builds the singleton grid generator system containing only a copy of generator g; writes a handle for the newly created system at address pgs.
- `int ppl_new_Grid_Generator_System_from_Grid_Generator_System (ppl_Grid_Generator_System_t *pgs, ppl_const_Grid_Generator_System_t gs)`
Builds a grid generator system that is a copy of gs; writes a handle for the newly created system at address pgs.
- `int ppl_assign_Grid_Generator_System_from_Grid_Generator_System (ppl_Grid_Generator_System_t dst, ppl_const_Grid_Generator_System_t src)`
Assigns a copy of the grid generator system src to dst.
- `int ppl_delete_Grid_Generator_System (ppl_const_Grid_Generator_System_t gs)`
Invalidates the handle gs: this makes sure the corresponding resources will eventually be released.

Functions that Do Not Modify the Grid Generator System

- `int ppl_Grid_Generator_System_space_dimension (ppl_const_Grid_Generator_System_t gs, ppl_dimension_type *m)`
Writes to m the dimension of the vector space enclosing gs.
- `int ppl_Grid_Generator_System_empty (ppl_const_Grid_Generator_System_t gs)`
Returns a positive integer if gs contains no generator; returns 0 otherwise.
- `int ppl_Grid_Generator_System_begin (ppl_const_Grid_Generator_System_t gs, ppl_Grid_Generator_System_const_iterator_t git)`
Assigns to git a const iterator "pointing" to the beginning of the grid generator system gs.
- `int ppl_Grid_Generator_System_end (ppl_const_Grid_Generator_System_t gs, ppl_Grid_Generator_System_const_iterator_t git)`
Assigns to git a const iterator "pointing" past the end of the grid generator system gs.
- `int ppl_Grid_Generator_System_OK (ppl_const_Grid_Generator_System_t gs)`
Returns a positive integer if gs is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if gs is broken. Useful for debugging purposes.

Functions that May Modify the Grid Generator System

- `int ppl_Grid_Generator_System_clear` (`ppl_Grid_Generator_System_t gs`)
Removes all the generators from the grid generator system `gs` and sets its space dimension to 0.
- `int ppl_Grid_Generator_System_insert_Grid_Generator` (`ppl_Grid_Generator_System_t gs`,
`ppl_const_Grid_Generator_t g`)
Inserts a copy of the grid generator `g` into `gs`; the space dimension is increased, if necessary.

10.31.1 Detailed Description

Types and functions for grid generator systems. The types and functions for grid generator systems provide an interface towards *Grid_Generator_System*.

10.31.2 Friends And Related Function Documentation

10.31.2.1 `int ppl_assign_Grid_Generator_System_from_Grid_Generator_System`
(`ppl_Grid_Generator_System_t dst`, `ppl_const_Grid_Generator_System_t src`)
[related]

Assigns a copy of the grid generator system `src` to `dst`.

Definition at line 1724 of file `ppl_c_implementation_common.cc`.

10.31.2.2 `int ppl_delete_Grid_Generator_System` (`ppl_const_Grid_Generator_System_t gs`)
[related]

Invalidates the handle `gs`: this makes sure the corresponding resources will eventually be released.

Definition at line 1716 of file `ppl_c_implementation_common.cc`.

10.31.2.3 `int ppl_Grid_Generator_System_begin` (`ppl_const_Grid_Generator_System_t gs`,
`ppl_Grid_Generator_System_const_iterator_t git`) [related]

Assigns to `git` a const iterator "pointing" to the beginning of the grid generator system `gs`.

Definition at line 1813 of file `ppl_c_implementation_common.cc`.

10.31.2.4 `int ppl_Grid_Generator_System_clear` (`ppl_Grid_Generator_System_t gs`)
[related]

Removes all the generators from the grid generator system `gs` and sets its space dimension to 0.

Definition at line 1749 of file `ppl_c_implementation_common.cc`.

10.31.2.5 int ppl_Grid_Generator_System_empty (ppl_const_Grid_Generator_System_t gs)
[related]

Returns a positive integer if *gs* contains no generator; returns 0 otherwise.

Definition at line 1742 of file `ppl_c_implementation_common.cc`.

10.31.2.6 int ppl_Grid_Generator_System_end (ppl_const_Grid_Generator_System_t gs,
ppl_Grid_Generator_System_const_iterator_t git) [related]

Assigns to *git* a const iterator "pointing" past the end of the grid generator system *gs*.

Definition at line 1824 of file `ppl_c_implementation_common.cc`.

10.31.2.7 int ppl_Grid_Generator_System_insert_Grid_Generator (ppl_Grid_Generator_System_t gs,
ppl_const_Grid_Generator_t g)
[related]

Inserts a copy of the grid generator *g* into *gs*; the space dimension is increased, if necessary.

Definition at line 1757 of file `ppl_c_implementation_common.cc`.

10.31.2.8 int ppl_Grid_Generator_System_OK (ppl_const_Grid_Generator_System_t gs)
[related]

Returns a positive integer if *gs* is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if *gs* is broken. Useful for debugging purposes.

Definition at line 1767 of file `ppl_c_implementation_common.cc`.

10.31.2.9 int ppl_Grid_Generator_System_space_dimension (ppl_const_Grid_Generator_System_t gs,
ppl_dimension_type * m) [related]

Writes to *m* the dimension of the vector space enclosing *gs*.

Definition at line 1733 of file `ppl_c_implementation_common.cc`.

10.31.2.10 int ppl_new_Grid_Generator_System (ppl_Grid_Generator_System_t * pgs)
[related]

Builds an empty system of grid generators and writes a handle to it at address *pgs*.

Definition at line 1682 of file `ppl_c_implementation_common.cc`.

10.31.2.11 `int ppl_new_Grid_Generator_System_from_Grid_Generator` (`ppl_Grid_Generator_System_t *pgs`, `ppl_const_Grid_Generator_t g`) [**related**]

Builds the singleton grid generator system containing only a copy of generator `g`; writes a handle for the newly created system at address `pgs`.

Definition at line 1699 of file `ppl_c_implementation_common.cc`.

10.31.2.12 `int ppl_new_Grid_Generator_System_from_Grid_Generator_System` (`ppl_Grid_Generator_System_t *pgs`, `ppl_const_Grid_Generator_System_t gs`) [**related**]

Builds a grid generator system that is a copy of `gs`; writes a handle for the newly created system at address `pgs`.

Definition at line 1708 of file `ppl_c_implementation_common.cc`.

The documentation for this interface was generated from the following file:

```

Related Functions

(Note that these are not member functions.)

Constructors, Assignment and Destructor

- `int ppl_new_Grid_Generator` (`ppl_Grid_Generator_t *pg`, `ppl_const_Linear_Expression_t le`, `enum ppl_enum_Grid_Generator_Type t`, `ppl_const_Coefficient_t d`)
Creates a new grid generator of direction le and type t . If the grid generator to be created is a point or a parameter, the divisor d is applied to le . If it is a line, d is simply disregarded. A handle for the new grid generator is written at address `pg`. The space dimension of the new grid generator is equal to the space dimension of le .
- `int ppl_new_Grid_Generator_zero_dim_point` (`ppl_Grid_Generator_t *pg`)
Creates the point that is the origin of the zero-dimensional space $\mathbb{R}^0$. Writes a handle for the new grid generator at address `pg`.
- `int ppl_new_Grid_Generator_from_Grid_Generator` (`ppl_Grid_Generator_t *pg`, `ppl_const_Grid_Generator_t g`)
Builds a grid generator that is a copy of g ; writes a handle for the newly created grid generator at address `pg`.
- `int ppl_assign_Grid_Generator_from_Grid_Generator` (`ppl_Grid_Generator_t dst`, `ppl_const_Grid_Generator_t src`)

Assigns a copy of the grid generator *src* to *dst*.

- `int ppl_delete_Grid_Generator (ppl_const_Grid_Generator_t g)`
Invalidates the handle *g*: this makes sure the corresponding resources will eventually be released.

Functions that Do Not Modify the Grid Generator

- `int ppl_Grid_Generator_space_dimension (ppl_const_Grid_Generator_t g, ppl_dimension_type *m)`
Writes to *m* the space dimension of *g*.
- `int ppl_Grid_Generator_type (ppl_const_Grid_Generator_t g)`
Returns the type of grid generator *g*.
- `int ppl_Grid_Generator_coefficient (ppl_const_Grid_Generator_t g, ppl_dimension_type var, ppl_Coefficient_t n)`
Copies into *n* the coefficient of variable *var* in grid generator *g*.
- `int ppl_Grid_Generator_divisor (ppl_const_Grid_Generator_t g, ppl_Coefficient_t n)`
If *g* is a point or a parameter assigns its divisor to *n*.
- `int ppl_Grid_Generator_OK (ppl_const_Grid_Generator_t g)`
Returns a positive integer if *g* is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if *g* is broken. Useful for debugging purposes.

10.32.1 Detailed Description

10.34.1 Detailed Description

Types and functions for [ppl_Int16_Box_tag](#).

10.34.2 Friends And Related Function Documentation

10.34.2.1 `int ppl_all_affine_ranking_functions_MS_Int16_Box (ppl_const_Int16_Box_t pset,
ppl_Polyhedron_t ph)` [**related**]

10.34.2.2 `int ppl_all_affine_ranking_functions_MS_Int16_Box_2 (ppl_const_Int16_Box_t
pset_before, ppl_const_Int16_Box_t pset_after, ppl_Polyhedron_t ph)` [**related**]

10.34.2.3 `int ppl_all_affine_ranking_functions_PR_Int16_Box (ppl_const_Int16_Box_t pset,
ppl_Polyhedron_t ph)` [**related**]

10.34.2.4 `int ppl_all_affine_ranking_functions_PR_Int16_Box_2 (ppl_const_Int16_Box_t
pset_before, ppl_const_Int16_Box_t pset_after, ppl_Polyhedron_t ph)` [**related**]

10.34.2.5 `int ppl_assign_Int16_Box_from_Int16_Box (ppl_Int16_Box_t dst,
ppl_const_Int16_Box_t src)` [**related**]

10.34.2.6 `int ppl_delete_Int16_Box (ppl_const_Int16_Box_t ph)` [**related**]

10.34.2.7 `int ppl_Int16_Box_add_congruence (ppl_Int16_Box_t ph, ppl_const_Congruence_t c)`
[**related**]

10.34.2.8 `int ppl_Int16_Box_add_congruences (ppl_Int16_Box_t ph,
ppl_const_Congruence_System_t cs)` [**related**]

10.34.2.9 `int ppl_Int16_Box_add_constraint (ppl_Int16_Box_t ph, ppl_const_Constraint_t c)`
[**related**]

- 10.34.2.10 `int ppl_Int16_Box_add_constraints (ppl_Int16_Box_t ph,
ppl_const_Constraint_System_t cs)` [`related`]

- 10.34.2.11 `int ppl_Int16_Box_add_recycled_congruences (ppl_Int16_Box_t ph,
ppl_Congruence_System_t cs)` [`related`]

- 10.34.2.12 `int ppl_Int16_Box_add_recycled_constraints (ppl_Int16_Box_t ph,
ppl_Constraint_System_t cs)` [`related`]

- 10.34.2.13 `int ppl_Int16_Box_add_space_dimensions_and_embed (ppl_Int16_Box_t ph,

10.38 ppl_Linear_Expression_tag Interface Reference

Types and functions for linear expressions.

```
#include <ppl_c.h>
```

Related Functions

(Note that these are not member functions.)

Constructors, Assignment and Destructor

- `int ppl_new_Linear_Expression (ppl_Linear_Expression_t *ple)`
Creates a new linear expression corresponding to the constant 0 in a zero-dimensional space; writes a handle for the new linear expression at address ple.
- `int ppl_new_Linear_Expression_with_dimension (ppl_Linear_Expression_t *ple, ppl_dimension_type d)`
Creates a new linear expression corresponding to the constant 0 in a d-dimensional space; writes a handle for the new linear expression at address ple.
- `int ppl_new_Linear_Expression_from_Linear_Expression (ppl_Linear_Expression_t *ple, ppl_const_Linear_Expression_t le)`
Builds a linear expression that is a copy of le; writes a handle for the newly created linear expression at address ple.
- `int ppl_new_Linear_Expression_from_Constraint (ppl_Linear_Expression_t *ple, ppl_const_Constraint_t c)`
Builds a linear expression corresponding to constraint c; writes a handle for the newly created linear expression at address ple.
- `int ppl_new_Linear_Expression_from_Generator (ppl_Linear_Expression_t *ple, ppl_const_Generator_t g)`
Builds a linear expression corresponding to generator g; writes a handle for the newly created linear expression at address ple.

- int [ppl_new_Linear_Expression_from_Congruence](#) (ppl_Linear_Expression_t *ple, ppl_const_Congruence_t c)
Builds a linear expression corresponding to congruence c ; writes a handle for the newly created linear expression at address ple .
- int [ppl_new_Linear_Expression_from_Grid_Generator](#) (ppl_Linear_Expression_t *ple, ppl_const_Grid_Generator_t g)
Builds a linear expression corresponding to grid generator g ; writes a handle for the newly created linear expression at address ple .
- int [ppl_assign_Linear_Expression_from_Linear_Expression](#) (ppl_Linear_Expression_t dst, ppl_const_Linear_Expression_t src)
Assigns a copy of the linear expression src to dst .
- int [ppl_delete_Linear_Expression](#) (ppl_const_Linear_Expression_t le)
Invalidates the handle le : this makes sure the corresponding resources will eventually be released.

Functions that Do Not Modify the Linear Expression

- int [ppl_Linear_Expression_space_dimension](#) (ppl_const_Linear_Expression_t le, [ppl_dimension_type](#) *m)
Writes to m the space dimension of le .
- int [ppl_Linear_Expression_coefficient](#) (ppl_const_Linear_Expression_t le, [ppl_dimension_type](#) var, ppl_Coefficient_t n)
Copies into n the coefficient of variable var in the linear expression le .
- int [ppl_Linear_Expression_inhomogeneous_term](#) (ppl_const_Linear_Expression_t le, [ppl_Coefficient_t](#) n)
Copies into n the inhomogeneous term of linear expression le .
- int [ppl_Linear_Expression_OK](#) (ppl_const_Linear_Expression_t le)
Returns a positive integer if le is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if le is broken. Useful for debugging purposes.
- int [ppl_Linear_Expression_is_zero](#) (ppl_const_Linear_Expression_t le)
Returns `true` if and only if $*this$ is 0.
- int [ppl_Linear_Expression_all_homogeneous_terms_are_zero](#) (ppl_const_Linear_Expression_t le)
Returns `true` if and only if all the homogeneous terms of $*this$ are 0.

Functions that May Modify the Linear Expression

- int [ppl_Linear_Expression_add_to_coefficient](#) (ppl_Linear_Expression_t le, [ppl_dimension_type](#) var, ppl_const_Coefficient_t n)
Adds n to the coefficient of variable var in the linear expression le . The space dimension is set to be the maximum between $var + 1$ and the old space dimension.
- int [ppl_Linear_Expression_add_to_inhomogeneous](#) (ppl_Linear_Expression_t le, ppl_const_Coefficient_t n)
Adds n to the inhomogeneous term of the linear expression le .

- `int ppl_add_Linear_Expression_to_Linear_Expression` (`ppl_Linear_Expression_t dst`, `ppl_const_Linear_Expression_t src`)
Adds the linear expression `src` to `dst`.
- `int ppl_subtract_Linear_Expression_from_Linear_Expression` (`ppl_Linear_Expression_t dst`, `ppl_const_Linear_Expression_t src`)
Subtracts the linear expression `src` from `dst`.
- `int ppl_multiply_Linear_Expression_by_Coefficient` (`ppl_Linear_Expression_t le`, `ppl_const_Coefficient_t n`)
Multiply the linear expression `dst` by `n`.

10.38.1 Detailed Description

Types and functions for linear expressions. The types and functions for linear expression provide an interface towards *Linear_Expression*.

10.38.2 Friends And Related Function Documentation

10.38.2.1 `int ppl_add_Linear_Expression_to_Linear_Expression` (`ppl_Linear_Expression_t dst`, `ppl_const_Linear_Expression_t src`) [**related**]

Adds the linear expression `src` to `dst`.

Definition at line 557 of file `ppl_c_implementation_common.cc`.

10.38.2.2 `int ppl_assign_Linear_Expression_from_Linear_Expression` (`ppl_Linear_Expression_t dst`, `ppl_const_Linear_Expression_t src`) [**related**]

Assigns a copy of the linear expression `src` to `dst`.

Definition at line 526 of file `ppl_c_implementation_common.cc`.

10.38.2.3 `int ppl_delete_Linear_Expression` (`ppl_const_Linear_Expression_t le`) [**related**]

Invalidates the handle `le`: this makes sure the corresponding resources will eventually be released.

Definition at line 518 of file `ppl_c_implementation_common.cc`.

10.38.2.4 `int ppl_Linear_Expression_add_to_coefficient` (`ppl_Linear_Expression_t le`, `ppl_dimension_type var`, `ppl_const_Coefficient_t n`) [**related**]

Adds `n` to the coefficient of variable `var` in the linear expression `le`. The space dimension is set to be the maximum between `var + 1` and the old space dimension.

Definition at line 535 of file ppl_c_implementation_common.cc.

10.38.2.5 `int ppl_Linear_Expression_add_to_inhomogeneous (ppl_Linear_Expression_t le,
ppl_const_Coefficient_t n)` [**related**]

Adds *n* to the inhomogeneous term of the linear expression *le*.

Definition at line 546 of file ppl_c_implementation_common.cc.

10.38.2.6 `int ppl_Linear_Expression_all_homogeneous_terms_are_zero
(ppl_const_Linear_Expression_t le)` [**related**]

Returns `true` if and only if all the homogeneous terms of **this* are 0.

Definition at line 628 of file ppl_c_implementation_common.cc.

10.38.2.7 `int ppl_Linear_Expression_coefficient (ppl_const_Linear_Expression_t le,
ppl_dimension_type var, ppl_Coefficient_t n)` [**related**]

Copies into *n* the coefficient of variable *var* in the linear expression *le*.

Definition at line 594 of file ppl_c_implementation_common.cc.

10.38.2.8 `int ppl_Linear_Expression_inhomogeneous_term (ppl_const_Linear_Expression_t le,
ppl_Coefficient_t n)` [**related**]

Copies into *n* the inhomogeneous term of linear expression *le*.

Definition at line 605 of file ppl_c_implementation_common.cc.

10.38.2.9 `int ppl_Linear_Expression_is_zero (ppl_const_Linear_Expression_t le)` [**related**]

Returns `true` if and only if **this* is 0.

Definition at line 621 of file ppl_c_implementation_common.cc.

10.38.2.10 `int ppl_Linear_Expression_OK (ppl_const_Linear_Expression_t le)` [**related**]

Returns a positive integer if *le* is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if *le* is broken. Useful for debugging purposes.

Definition at line 615 of file ppl_c_implementation_common.cc.

10.38.2.11 `int ppl_Linear_Expression_space_dimension (ppl_const_Linear_Expression_t le,
ppl_dimension_type * m)` [**related**]

Writes to *m* the space dimension of *le*.

Definition at line 586 of file `ppl_c_implementation_common.cc`.

10.38.2.12 `int ppl_multiply_Linear_Expression_by_Coefficient (ppl_Linear_Expression_t le,
ppl_const_Coefficient_t n)` [**related**]

Multiply the linear expression *dst* by *n*.

Definition at line 576 of file `ppl_c_implementation_common.cc`.

10.38.2.13 `int ppl_new_Linear_Expression (ppl_Linear_Expression_t * ple)` [**related**]

Creates a new linear expression corresponding to the constant 0 in a zero-dimensional space; writes a handle for the new linear expression at address *ple*.

Definition at line 492 of file `ppl_c_implementation_common.cc`.

10.38.2.14 `int ppl_new_Linear_Expression_from_Congruence (ppl_Linear_Expression_t * ple,
ppl_const_Congruence_t c)` [**related**]

Builds a linear expression corresponding to congruence *c*; writes a handle for the newly created linear expression at address *ple*.

Definition at line 1366 of file `ppl_c_implementation_common.cc`.

10.38.2.15 `int ppl_new_Linear_Expression_from_Constraint (ppl_Linear_Expression_t * ple,
ppl_const_Constraint_t c)` [**related**]

Builds a linear expression corresponding to constraint *c*; writes a handle for the newly created linear expression at address *ple*.

Definition at line 757 of file `ppl_c_implementation_common.cc`.

10.38.2.16 `int ppl_new_Linear_Expression_from_Generator (ppl_Linear_Expression_t * ple,
ppl_const_Generator_t g)` [**related**]

Builds a linear expression corresponding to generator *g*; writes a handle for the newly created linear expression at address *ple*.

Definition at line 1079 of file `ppl_c_implementation_common.cc`.

10.38.2.17 `int ppl_new_Linear_Expression_from_Grid_Generator (ppl_Linear_Expression_t * ple, ppl_const_Grid_Generator_t g)` [**related**]

Builds a linear expression corresponding to grid generator *g*; writes a handle for the newly created linear expression at address *ple*.

10.38.2.18 `int ppl_new_Linear_Expression_from_Linear_Expression (ppl_Linear_Expression_t * ple, ppl_const_Linear_Expression_t le)` [**related**]

Builds a linear expression that is a copy of *le*; writes a handle for the newly created linear expression at address *ple*.

Definition at line 510 of file `ppl_c_implementation_common.cc`.

10.38.2.19 `int ppl_new_Linear_Expression_with_dimension (ppl_Linear_Expression_t * ple, ppl_dimension_type d)` [**related**]

Creates a new linear expression corresponding to the constant 0 in a *d*-dimensional space; writes a handle for the new linear expression at address *ple*.

Definition at line 499 of file `ppl_c_implementation_common.cc`.

10.38.2.20 `int ppl_subtract_Linear_Expression_from_Linear_Expression (ppl_Linear_Expression_t dst, ppl_const_Linear_Expression_t src)` [**related**]

Subtracts the linear expression *src* from *dst*.

Definition at line 567 of file `ppl_c_implementation_common.cc`.

The documentation for this interface was generated from the following file:

10.39.1 Detailed Description

Types and functions for `ppl_Long_Double_Box_tag`.

10.39.2 Friends And Related Function Documentation

- 10.39.2.1** `int ppl_all_affine_ranking_functions_MS_Long_Double_Box`
(`ppl_const_Long_Double_Box_t pset`, `ppl_Polyhedron_t ph`) [**related**]
- 10.39.2.2** `int ppl_all_affine_ranking_functions_MS_Long_Double_Box_2`
(`ppl_const_Long_Double_Box_t pset_before`, `ppl_const_Long_Double_Box_t pset_after`, `ppl_Polyhedron_t ph`) [**related**]
- 10.39.2.3** `int ppl_all_affine_ranking_functions_PR_Long_Double_Box`
(`ppl_const_Long_Double_Box_t pset`, `ppl_Polyhedron_t ph`) [**related**]
- 10.39.2.4** `int ppl_all_affine_ranking_functions_PR_Long_Double_Box_2`
(`ppl_const_Long_Double_Box_t pset_before`, `ppl_const_Long_Double_Box_t pset_after`, `ppl_Polyhedron_t ph`) [**related**]
- 10.39.2.5** `int ppl_assign_Long_Double_Box_from_Long_Double_Box` (`ppl_Long_Double_Box_t dst`, `ppl_const_Long_Double_Box_t src`) [**related**]
- 10.39.2.6** `int ppl_delete_Long_Double_Box` (`ppl_const_Long_Double_Box_t ph`) [**related**]

- 10.39.2.7** `int ppl_Long_Double_Box_add_congruence (ppl_Long_Double_Box_t ph,
ppl_const_Congruence_t c)` [**related**]
- 10.39.2.8** `int ppl_Long_Double_Box_add_congruences (ppl_Long_Double_Box_t ph,
ppl_const_Congruence_System_t cs)` [**related**]
- 10.39.2.9** `int ppl_Long_Double_Box_add_constraint (ppl_Long_Double_Box_t ph,
ppl_const_Constraint_t c)` [**related**]
- 10.39.2.10** `int ppl_Long_Double_Box_add_constraints (ppl_Long_Double_Box_t ph,
ppl_const_Constraint_System_t cs)` [**related**]
- 10.39.2.11** `int ppl_Long_Double_Box_add_recycled_congruences (ppl_Long_Double_Box_t ph,
ppl_Congruence_System_t cs)` [**related**]
- 10.39.2.12** `int ppl_Long_Double_Box_add_recycled_constraints (ppl_Long_Double_Box_t ph,
ppl_Constraint_System_t cs)` [**related**]
- 10.39.2.13** `int ppl_Long_Double_Box_add_space_dimensions_and_embed
(ppl_Long_Double_Box_t ph, ppl_dimension_type d)` [**related**]

10.40 ppl_MIP_Problem_tag Interface Reference

Types and functions for MIP problems.

```
#include <ppl_c.h>
```

Related Functions

(Note that these are not member functions.)

Symbolic Constants

- `int PPL_OPTIMIZATION_MODE_MAXIMIZATION`
Code of the "maximization" optimization mode.
- `int PPL_OPTIMIZATION_MODE_MINIMIZATION`
Code of the "minimization" optimization mode.
- `int PPL_MIP_PROBLEM_STATUS_UNFEASIBLE`
Code of the "unfeasible MIP problem" status.
- `int PPL_MIP_PROBLEM_STATUS_UNBOUNDED`
Code of the "unbounded MIP problem" status.
- `int PPL_MIP_PROBLEM_STATUS_OPTIMIZED`
Code of the "optimized MIP problem" status.

- `int PPL_MIP_PROBLEM_CONTROL_PARAMETER_NAME_PRICING`
Code for the MIP problem's "pricing" control parameter name.
- `int PPL_MIP_PROBLEM_CONTROL_PARAMETER_PRICING_TEXTBOOK`
Code of MIP problem's "textbook" pricing method.
- `int PPL_MIP_PROBLEM_CONTROL_PARAMETER_PRICING_STEEPEST_EDGE_EXACT`
Code of MIP problem's "exact steepest-edge" pricing method.
- `int PPL_MIP_PROBLEM_CONTROL_PARAMETER_PRICING_STEEPEST_EDGE_FLOAT`
Code of MIP problem's "float steepest-edge" pricing method.

Constructors, Assignment and Destructor

- `int ppl_new_MIP_Problem_from_space_dimension` (`ppl_MIP_Problem_t *pmip`, `ppl_dimension_type d`)
Builds a trivial MIP problem of dimension `d` and writes a handle to it at address `pmip`.
- `int ppl_new_MIP_Problem` (`ppl_MIP_Problem_t *pmip`, `ppl_dimension_type d`, `ppl_const_Constraint_System_t cs`, `ppl_const_Linear_Expression_t le`, `int m`)
Builds a MIP problem of space dimension `d` having feasible region `cs`, objective function `le` and optimization mode `m`; writes a handle to it at address `pmip`.
- `int ppl_new_MIP_Problem_from_MIP_Problem` (`ppl_MIP_Problem_t *pmip`, `ppl_const_MIP_Problem_t mip`)
Builds a MIP problem that is a copy of `mip`; writes a handle for the newly created system at address `pmip`.
- `int ppl_assign_MIP_Problem_from_MIP_Problem` (`ppl_MIP_Problem_t dst`, `ppl_const_MIP_Problem_t src`)
Assigns a copy of the MIP problem `src` to `dst`.
- `int ppl_delete_MIP_Problem` (`ppl_const_MIP_Problem_t mip`)
Invalidates the handle `mip`: this makes sure the corresponding resources will eventually be released.

Functions that Do Not Modify the MIP_Problem

- `int ppl_MIP_Problem_space_dimension` (`ppl_const_MIP_Problem_t mip`, `ppl_dimension_type *m`)
Writes to `m` the dimension of the vector space enclosing `mip`.
- `int ppl_MIP_Problem_number_of_integer_space_dimensions` (`ppl_const_MIP_Problem_t mip`, `ppl_dimension_type *m`)
Writes to `m` the number of integer space dimensions of `mip`.
- `int ppl_MIP_Problem_integer_space_dimensions` (`ppl_const_MIP_Problem_t mip`, `ppl_dimension_type ds[]`)
Writes in the first positions of the array `ds` all the integer space dimensions of problem `mip`. If the array is not big enough to hold all of the integer space dimensions, the behavior is undefined.

- `int ppl_MIP_Problem_number_of_constraints` (`ppl_const_MIP_Problem_t mip`, `ppl_dimension_type *m`)
Writes to `m` the number of constraints defining the feasible region of `mip`.
- `int ppl_MIP_Problem_constraint_at_index` (`ppl_const_MIP_Problem_t mip`, `ppl_dimension_type i`, `ppl_const_Constraint_t *pc`)
Writes at address `pc` a const handle to the `i`-th constraint defining the feasible region of the MIP problem `mip`.
- `int ppl_MIP_Problem_objective_function` (`ppl_const_MIP_Problem_t mip`, `ppl_const_Linear_Expression_t *ple`)
Writes a const handle to the linear expression defining the objective function of the MIP problem `mip` at address `ple`.
- `int ppl_MIP_Problem_optimization_mode` (`ppl_const_MIP_Problem_t mip`)
Returns the optimization mode of the MIP problem `mip`.
- `int ppl_MIP_Problem_OK` (`ppl_const_MIP_Problem_t mip`)
Returns a positive integer if `mip` is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if `mip` is broken. Useful for debugging purposes.

Functions that May Modify the MIP_Problem

- `int ppl_MIP_Problem_clear` (`ppl_MIP_Problem_t mip`)
Resets the MIP problem to be a trivial problem of space dimension 0.
- `int ppl_MIP_Problem_add_space_dimensions_and_embed` (`ppl_MIP_Problem_t mip`, `ppl_dimension_type d`)
Adds `d` new dimensions to the space enclosing the MIP problem `mip` and to `mip` itself.
- `int ppl_MIP_Problem_add_to_integer_space_dimensions` (`ppl_MIP_Problem_t mip`, `ppl_dimension_type ds[]`, `size_t n`)
Sets the space dimensions that are specified in first `n` positions of the array `ds` to be integer dimensions of problem `mip`. The presence of duplicates in `ds` is a waste but an innocuous one.
- `int ppl_MIP_Problem_add_constraint` (`ppl_MIP_Problem_t mip`, `ppl_const_Constraint_t c`)
Modifies the feasible region of the MIP problem `mip` by adding a copy of the constraint `c`.
- `int ppl_MIP_Problem_add_constraints` (`ppl_MIP_Problem_t mip`, `ppl_const_Constraint_System_t cs`)
Modifies the feasible region of the MIP problem `mip` by adding a copy of the constraints in `cs`.
- `int ppl_MIP_Problem_set_objective_function` (`ppl_MIP_Problem_t mip`, `ppl_const_Linear_Expression_t le`)
Sets the objective function of the MIP problem `mip` to a copy of `le`.
- `int ppl_MIP_Problem_set_optimization_mode` (`ppl_MIP_Problem_t mip`, `int mode`)
Sets the optimization mode of the MIP problem `mip` to `mode`.

Computing the Solution of the MIP_Problem

- `int ppl_MIP_Problem_is_satisfiable` (`ppl_const_MIP_Problem_t mip`)
Returns a positive integer if `mip` is satisfiable; returns 0 otherwise.

- int `ppl_MIP_Problem_solve` (`ppl_const_MIP_Problem_t mip`)
Solves the MIP problem `mip`, returning an exit status.
- int `ppl_MIP_Problem_evaluate_objective_function` (`ppl_const_MIP_Problem_t mip`, `ppl_const_Generator_t g`, `ppl_Coefficient_t num`, `ppl_Coefficient_t den`)
Evaluates the objective function of `mip` on point `g`.
- int `ppl_MIP_Problem_feasible_point` (`ppl_const_MIP_Problem_t mip`, `ppl_const_Generator_t *pg`)
Writes a const handle to a feasible point for the MIP problem `mip` at address `pg`.
- int `ppl_MIP_Problem_optimizing_point` (`ppl_const_MIP_Problem_t mip`, `ppl_const_Generator_t *pg`)
Writes a const handle to an optimizing point for the MIP problem `mip` at address `pg`.
- int `ppl_MIP_Problem_optimal_value` (`ppl_const_MIP_Problem_t mip`, `ppl_Coefficient_t num`, `ppl_Coefficient_t den`)
Returns the optimal value for `mip`.

Querying/Setting Control Parameters

- int `ppl_MIP_Problem_get_control_parameter` (`ppl_const_MIP_Problem_t mip`, int `name`)
Returns the value of control parameter `name` in problem `mip`.
- int `ppl_MIP_Problem_set_control_parameter` (`ppl_MIP_Problem_t mip`, int `value`)
Sets control parameter `value` in problem `mip`.
- int `ppl_MIP_Problem_total_memory_in_bytes` (`ppl_const_MIP_Problem_t mip`, `size_t *sz`)
Writes into `*sz` the size in bytes of the memory occupied by `mip`.
- int `ppl_MIP_Problem_external_memory_in_bytes` (`ppl_const_MIP_Problem_t mip`, `size_t *sz`)
Writes into `*sz` the size in bytes of the memory managed by `mip`.

10.40.1 Detailed Description

Types and functions for MIP problems. The types and functions for MIP problems provide an interface towards *MIP_Problem*.

10.40.2 Friends And Related Function Documentation

10.40.2.1 int `ppl_assign_MIP_Problem_from_MIP_Problem` (`ppl_MIP_Problem_t dst`, `ppl_const_MIP_Problem_t src`) [**related**]

Assigns a copy of the MIP problem `src` to `dst`.

Definition at line 1902 of file `ppl_c_implementation_common.cc`.

10.40.2.2 int ppl_delete_MIP_Problem (ppl_const_MIP_Problem_t *mip*) [related]

Invalidates the handle *mip*: this makes sure the corresponding resources will eventually be released.

Definition at line 1895 of file `ppl_c_implementation_common.cc`.

**10.40.2.3 int ppl_MIP_Problem_add_constraint (ppl_MIP_Problem_t *mip*,
ppl_const_Constraint_t *c*) [related]**

Modifies the feasible region of the MIP problem *mip* by adding a copy of the constraint *c*.

Definition at line 2010 of file `ppl_c_implementation_common.cc`.

**10.40.2.4 int ppl_MIP_Problem_add_constraints (ppl_MIP_Problem_t *mip*,
ppl_const_Constraint_System_t *cs*) [related]**

Modifies the feasible region of the MIP problem *mip* by adding a copy of the constraints in *cs*.

Definition at line 2020 of file `ppl_c_implementation_common.cc`.

**10.40.2.5 int ppl_MIP_Problem_add_space_dimensions_and_embed (ppl_MIP_Problem_t *mip*,
ppl_dimension_type *d*) [related]**

Adds *d* new dimensions to the space enclosing the MIP problem *mip* and to *mip* itself.

Definition at line 1988 of file `ppl_c_implementation_common.cc`.

**10.40.2.6 int ppl_MIP_Problem_add_to_integer_space_dimensions (ppl_MIP_Problem_t *mip*,
ppl_dimension_type *ds*[], size_t *n*) [related]**

Sets the space dimensions that are specified in first *n* positions of the array *ds* to be integer dimensions of problem *mip*. The presence of duplicates in *ds* is a waste but an innocuous one.

Definition at line 1997 of file `ppl_c_implementation_common.cc`.

10.40.2.7 int ppl_MIP_Problem_clear (ppl_MIP_Problem_t *mip*) [related]

Resets the MIP problem to be a trivial problem of space dimension 0.

Definition at line 1981 of file `ppl_c_implementation_common.cc`.

10.40.2.8 `int ppl_MIP_Problem_constraint_at_index (ppl_const_MIP_Problem_t mip,
ppl_dimension_type i, ppl_const_Constraint_t * pc) [related]`

Writes at address `pc` a const handle to the `i`-th constraint defining the feasible region of the MIP problem `mip`.

Definition at line 1950 of file `ppl_c_implementation_common.cc`.

10.40.2.9 `int PPL_MIP_PROBLEM_CONTROL_PARAMETER_NAME_PRICING
[related]`

Code for the MIP problem's "pricing" control parameter name.

Definition at line 2471 of file `ppl_c.h`.

10.40.2.10 `int PPL_MIP_PROBLEM_CONTROL_PARAMETER_PRICING_STEEPEST_-
EDGE_EXACT [related]`

Code of MIP problem's "exact steepest-edge" pricing method.

Definition at line 2481 of file `ppl_c.h`.

10.40.2.11 `int PPL_MIP_PROBLEM_CONTROL_PARAMETER_PRICING_STEEPEST_-
EDGE_FLOAT [related]`

Code of MIP problem's "float steepest-edge" pricing method.

Definition at line 2486 of file `ppl_c.h`.

10.40.2.12 `int PPL_MIP_PROBLEM_CONTROL_PARAMETER_PRICING_TEXTBOOK
[related]`

Code of MIP problem's "textbook" pricing method.

Definition at line 2476 of file `ppl_c.h`.

10.40.2.13 `int ppl_MIP_Problem_evaluate_objective_function (ppl_const_MIP_Problem_t mip,
ppl_const_Generator_t g, ppl_Coefficient_t num, ppl_Coefficient_t den) [related]`

Evaluates the objective function of `mip` on point `g`.

Parameters

mip The MIP problem defining the objective function;

g The generator on which the objective function will be evaluated;
num Will be assigned the numerator of the objective function value;
den Will be assigned the denominator of the objective function value;

Definition at line 2062 of file ppl_c_implementation_common.cc.

10.40.2.14 `int ppl_MIP_Problem_external_memory_in_bytes (ppl_const_MIP_Problem_t mip, size_t * sz) [related]`

Writes into *sz the size in bytes of the memory managed by mip.

Definition at line 2138 of file ppl_c_implementation_common.cc.

10.40.2.15 `int ppl_MIP_Problem_feasible_point (ppl_const_MIP_Problem_t mip, ppl_const_Generator_t * pg) [related]`

Writes a const handle to a feasible point for the MIP problem mip at address pg.

Definition at line 2076 of file ppl_c_implementation_common.cc.

10.40.2.16 `int ppl_MIP_Problem_get_control_parameter (ppl_const_MIP_Problem_t mip, int name) [related]`

Returns the value of control parameter name in problem mip.

Definition at line 2105 of file ppl_c_implementation_common.cc.

10.40.2.17 `int ppl_MIP_Problem_integer_space_dimensions (ppl_const_MIP_Problem_t mip, ppl_dimension_type ds[]) [related]`

Writes in the first positions of the array ds all the integer space dimensions of problem mip. If the array is not big enough to hold all of the integer space dimensions, the behavior is undefined.

Definition at line 1929 of file ppl_c_implementation_common.cc.

10.40.2.18 `int ppl_MIP_Problem_is_satisfiable (ppl_const_MIP_Problem_t mip) [related]`

Returns a positive integer if mip is satisfiable; returns 0 otherwise.

Definition at line 2050 of file ppl_c_implementation_common.cc.

10.40.2.19 `int ppl_MIP_Problem_number_of_constraints (ppl_const_MIP_Problem_t mip, ppl_dimension_type * m) [related]`

Writes to *m* the number of constraints defining the feasible region of *mip*.

Definition at line 1941 of file `ppl_c_implementation_common.cc`.

Referenced by `ppl_MIP_Problem_constraint_at_index()`.

10.40.2.20 `int ppl_MIP_Problem_number_of_integer_space_dimensions` `(ppl_const_MIP_Problem_t mip, ppl_dimension_type * m) [related]`

Writes to *m* the number of integer space dimensions of *mip*.

Definition at line 1920 of file `ppl_c_implementation_common.cc`.

10.40.2.21 `int ppl_MIP_Problem_objective_function` (`ppl_const_MIP_Problem_t mip`, `ppl_const_Linear_Expression_t * ple`) [related]

Writes a const handle to the linear expression defining the objective function of the MIP problem *mip* at address *ple*.

Definition at line 1966 of file `ppl_c_implementation_common.cc`.

10.40.2.22 `int ppl_MIP_Problem_OK` (`ppl_const_MIP_Problem_t mip`) [related]

Returns a positive integer if *mip* is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if *mip* is broken. Useful for debugging purposes.

Definition at line 2124 of file `ppl_c_implementation_common.cc`.

10.40.2.23 `int ppl_MIP_Problem_optimal_value` (`ppl_const_MIP_Problem_t mip`, `ppl_Coefficient_t num`, `ppl_Coefficient_t den`) [related]

Returns the optimal value for *mip*.

Parameters

mip The MIP problem;

num Will be assigned the numerator of the optimal value;

den Will be assigned the denominator of the optimal value.

Definition at line 2094 of file `ppl_c_implementation_common.cc`.

10.40.2.24 `int ppl_MIP_Problem_optimization_mode` (`ppl_const_MIP_Problem_t mip`) [related]

Returns the optimization mode of the MIP problem *mip*.

Definition at line 1975 of file `ppl_c_implementation_common.cc`.

10.40.2.25 `int ppl_MIP_Problem_optimizing_point (ppl_const_MIP_Problem_t mip,
ppl_const_Generator_t *pg) [related]`

Writes a const handle to an optimizing point for the MIP problem `mip` at address `pg`.

Definition at line 2085 of file `ppl_c_implementation_common.cc`.

10.40.2.26 `int ppl_MIP_Problem_set_control_parameter (ppl_MIP_Problem_t mip, int value)
[related]`

Sets control parameter `value` in problem `mip`.

Definition at line 2114 of file `ppl_c_implementation_common.cc`.

10.40.2.27 `int ppl_MIP_Problem_set_objective_function (ppl_MIP_Problem_t mip,
ppl_const_Linear_Expression_t le) [related]`

Sets the objective function of the MIP problem `mip` to a copy of `le`.

Definition at line 2030 of file `ppl_c_implementation_common.cc`.

10.40.2.28 `int ppl_MIP_Problem_set_optimization_mode (ppl_MIP_Problem_t mip, int mode)
[related]`

Sets the optimization mode of the MIP problem `mip` to `mode`.

Definition at line 2040 of file `ppl_c_implementation_common.cc`.

10.40.2.29 `int ppl_MIP_Problem_solve (ppl_const_MIP_Problem_t mip) [related]`

Solves the MIP problem `mip`, returning an exit status.

Returns

`PPL_MIP_PROBLEM_STATUS_UNFEASIBLE` if the MIP problem is not satisfiable; `PPL_MIP_PROBLEM_STATUS_UNBOUNDED` if the MIP problem is satisfiable but there is no finite bound to the value of the objective function; `PPL_MIP_PROBLEM_STATUS_OPTIMIZED` if the MIP problem admits an optimal solution.

Definition at line 2056 of file `ppl_c_implementation_common.cc`.

10.40.2.30 `int ppl_MIP_Problem_space_dimension (ppl_const_MIP_Problem_t mip,
ppl_dimension_type *m) [related]`

Writes to *m* the dimension of the vector space enclosing *mip*.

Definition at line 1912 of file `ppl_c_implementation_common.cc`.

10.40.2.31 `int PPL_MIP_PROBLEM_STATUS_OPTIMIZED` [related]

Code of the "optimized MIP problem" status.

Definition at line 2466 of file `ppl_c.h`.

10.40.2.32 `int PPL_MIP_PROBLEM_STATUS_UNBOUNDED` [related]

Code of the "unbounded MIP problem" status.

Definition at line 2461 of file `ppl_c.h`.

10.40.2.33 `int PPL_MIP_PROBLEM_STATUS_UNFEASIBLE` [related]

Code of the "unfeasible MIP problem" status.

Definition at line 2456 of file `ppl_c.h`.

10.40.2.34 `int ppl_MIP_Problem_total_memory_in_bytes (ppl_const_MIP_Problem_t mip, size_t * sz)` [related]

Writes into **sz* the size in bytes of the memory occupied by *mip*.

Definition at line 2130 of file `ppl_c_implementation_common.cc`.

10.40.2.35 `int ppl_new_MIP_Problem (ppl_MIP_Problem_t * pmip, ppl_dimension_type d, ppl_const_Constraint_System_t cs, ppl_const_Linear_Expression_t le, int m)` [related]

Builds a MIP problem of space dimension *d* having feasible region *cs*, objective function *le* and optimization mode *m*; writes a handle to it at address *pmip*.

Definition at line 1872 of file `ppl_c_implementation_common.cc`.

10.40.2.36 `int ppl_new_MIP_Problem_from_MIP_Problem (ppl_MIP_Problem_t * pmip, ppl_const_MIP_Problem_t mip)` [related]

Builds a MIP problem that is a copy of *mip*; writes a handle for the newly created system at address *pmip*.

Definition at line 1886 of file `ppl_c_implementation_common.cc`.

10.40.2.37 `int ppl_new_MIP_Problem_from_space_dimension (ppl_MIP_Problem_t * pmip,
ppl_dimension_type d)` [[related](#)]

Builds a trivial MIP problem of dimension *d* and writes a handle to it at address *pmip*.

Definition at line 1864 of file `ppl_c_implementation_common.cc`.

10.40.2.38 `int PPL_OPTIMIZATION_MODE_MAXIMIZATION` [[related](#)]

Code of the "maximization" optimization mode.

Definition at line 2446 of file `ppl_c.h`.

10.40.2.39 `int PPL_OPTIMIZATION_MODE_MINIMIZATION` [[related](#)]

Code of the "minimization" optimization mode.

Definition at line 2451 of file `ppl_c.h`.

The documentation for this interface was generated from the following file:

10.41.1 Detailed Description

Types and functions for `ppl_Octagonal_Shape_double_tag`.

10.41.2 Friends And Related Function Documentation

10.41.2.1 `int ppl_all_affine_ranking_functions_MS_Octagonal_Shape_double`
(`ppl_const_Octagonal_Shape_double_t` pset, `ppl_Polyhedron_t` ph) [**related**]

10.41.2.2 `int ppl_all_affine_ranking_functions_MS_Octagonal_Shape_double_2` (`ppl_const_Octagonal_Shape_double_t` pset_before, `ppl_const_Octagonal_Shape_double_t` pset_after, `ppl_Polyhedron_t` ph) [**related**]

10.41.2.3 `int ppl_all_affine_ranking_functions_PR_Octagonal_Shape_double`
(`ppl_const_Octagonal_Shape_double_t` pset, `ppl_Polyhedron_t` ph) [**related**]

- 10.41.2.4** `int ppl_all_affine_ranking_functions_PR_Octagonal_Shape_double_2 (ppl_const-Octagonal_Shape_double_t pset_before, ppl_const-Octagonal_Shape_double_t pset_after, ppl_Polyhedron_t ph)` [**related**]
- 10.41.2.5** `int ppl_assign_Octagonal_Shape_double_from_Octagonal_Shape_double (ppl_Octagonal_Shape_double_t dst, ppl_const-Octagonal_Shape_double_t src)` [**related**]
- 10.41.2.6** `int ppl_delete_Octagonal_Shape_double (ppl_const-Octagonal_Shape_double_t ph)` [**related**]
- 10.41.2.7** `int ppl_new_Octagonal_Shape_double_from_BD_Shape_double (ppl_Octagonal_Shape_double_t * pph, ppl_const_BD_Shape_double_t ph)` [**related**]
- 10.41.2.8** `int ppl_new_Octagonal_Shape_double_from_BD_Shape_double_with_complexity (ppl_Octagonal_Shape_double_t * pph, ppl_const_BD_Shape_double_t ph, int complexity)` [**related**]
- 10.41.2.9** `int ppl_new_Octagonal_Shape_double_from_BD_Shape_float (ppl_Octagonal_Shape_double_t * pph, ppl_const_BD_Shape_float_t ph)` [**related**]
- 10.41.2.10** `int ppl_new_Octagonal_Shape_double_from_BD_Shape_float_with_complexity (ppl_Octagonal_Shape_double_t * pph, ppl_const_BD_Shape_float_t ph, int complexity)` [**related**]
- 10.41.2.11** `int ppl_new_Octagonal_Shape_double_from_BD_Shape_int16_t (ppl_Octagonal_Shape_double_t * pph, ppl_const_BD_Shape_int16_t_t ph)` [**related**]

- 10.41.2.12 `int ppl_new_Octagonal_Shape_double_from_BD_Shape_int16_t_with_complexity`

10.42.1 Detailed Description

Types and functions for `ppl_Octagonal_Shape_float_tag`.

10.42.2 Friends And Related Function Documentation

- 10.42.2.1** `int ppl_all_affine_ranking_functions_MS_Octagonal_Shape_float`
(`ppl_const_Octagonal_Shape_float_t pset`, `ppl_Polyhedron_t ph`) [**related**]
- 10.42.2.2** `int ppl_all_affine_ranking_functions_MS_Octagonal_Shape_float_2`
(`ppl_const_Octagonal_Shape_float_t pset_before`, `ppl_const_Octagonal_Shape_float_t pset_after`, `ppl_Polyhedron_t ph`) [**related**]
- 10.42.2.3** `int ppl_all_affine_ranking_functions_PR_Octagonal_Shape_float`
(`ppl_const_Octagonal_Shape_float_t pset`, `ppl_Polyhedron_t ph`) [**related**]
- 10.42.2.4** `int ppl_all_affine_ranking_functions_PR_Octagonal_Shape_float_2`
(`ppl_const_Octagonal_Shape_float_t pset_before`, `ppl_const_Octagonal_Shape_float_t pset_after`, `ppl_Polyhedron_t ph`) [**related**]
- 10.42.2.5** `int ppl_assign_Octagonal_Shape_float_from_Octagonal_Shape_float`
(`ppl_Octagonal_Shape_float_t dst`, `ppl_const_Octagonal_Shape_float_t src`)
[**related**]

- 10.42.2.6** `int ppl_delete_Octagonal_Shape_float (ppl_const_Octagonal_Shape_float_t ph)`
[related]
- 10.42.2.7** `int ppl_new_Octagonal_Shape_float_from_BD_Shape_double`
(`ppl_Octagonal_Shape_float_t * pph`, `ppl_const_BD_Shape_double_t ph`) [related]
- 10.42.2.8** `int ppl_new_Octagonal_Shape_float_from_BD_Shape_double_with_complexity`
(`ppl_Octagonal_Shape_float_t * pph`, `ppl_const_BD_Shape_double_t ph`, `int complexity`)
[related]
- 10.42.2.9** `int ppl_new_Octagonal_Shape_float_from_BD_Shape_float (ppl_`
`Octagonal_Shape_float_t * pph`, `ppl_const_BD_Shape_float_t ph`)
[related]
- 10.42.2.10** `int ppl_new_Octagonal_Shape_float_from_BD_Shape_float_with_complexity`
(`ppl_Octagonal_Shape_float_t * pph`, `ppl_const_BD_Shape_float_t ph`, `int complexity`)
[related]
- 10.42.2.11** `int ppl_new_Octagonal_Shape_float_from_BD_Shape_int16_t`
(`ppl_Octagonal_Shape_float_t * pph`, `ppl_const_BD_Shape_int16_t_t ph`)
[related]
- 10.42.2.12** `int ppl_new_Octagonal_Shape_float_from_BD_Shape_int16_t_with_complexity`
(`ppl_Octagonal_Shape_float_t * pph`, `ppl_const_BD_Shape_int16_t_t ph`, `int`
`complexity`) [related]
- 10.42.2.13** `int ppl_new_Octagonal_Shape_float_from_BD_Shape_int32_t`
(`ppl_Octagonal_Shape_float_t * pph`, `ppl_const_BD_Shape_int32_t_t ph`)
[related]

- 10.42.2.14 `int ppl_new_Octagonal_Shape_float_from_BD_Shape_int32_t_with_complexity`
 (`ppl_Octagonal_Shape_float_t * pph`, `ppl_const_BD_Shape_int32_t_t ph`, `int complexity`) [`related`]
- 10.42.2.15 `int ppl_new_Octagonal_Shape_float_from_BD_Shape_int64_t`
 (`ppl_Octagonal_Shape_float_t * pph`, `ppl_const_BD_Shape_int64_t_t ph`)
 [`related`]
- 10.42.2.16 `int ppl_new_Octagonal_Shape_float_from_BD_Shape_int64_t_with_complexity`
 (`ppl_Octagonal_Shape_float_t * pph`, `ppl_const_BD_Shape_int64_t_t ph`, `int complexity`) [`related`]
- 10.42.2.17 `int ppl_new_Octagonal_Shape_float_from_BD_Shape_int8_t`
 (`ppl_Octagonal_Shape_float_t * pph`, `ppl_const_BD_Shape_int8_t_t ph`) [`related`]
- 10.42.2.18 `int ppl_new_Octagonal_Shape_float_from_BD_Shape_int8_t_with_complexity`
 (`ppl_Octagonal_Shape_float_t * pph`, `ppl_const_BD_Shape_int8_t_t ph`, `int complexity`) [`related`]
- 10.42.2.19 `int ppl_new_Octagonal_Shape_float_from_BD_Shape_long_double`
 (`ppl_Octagonal_Shape_float_t * pph`, `ppl_const_BD_Shape_long_double_t ph`)
 [`related`]
- 10.42.2.20 `int ppl_new_Octagonal_Shape_float_from_BD_Shape_long_double_with_complexity`
 (`ppl_Octagonal_Shape_float_t * pph`, `ppl_const_BD_Shape_long_double_t ph`, `int complexity`) [`related`]
- 10.42.2.21 `int ppl_new_Octagonal_Shape_float_from_BD_Shape_mpq_class`
 (`ppl_Octagonal_Shape_float_t * pph`, `ppl_const_BD_Shape_mpq_class_t ph`)
 [`related`]

10.43.1 Detailed Description

Types and functions for `ppl_Octagonal_Shape_int16_t_tag`.

10.43.2 Friends And Related Function Documentation

- 10.43.2.1** `int ppl_all_affine_ranking_functions_MS_Octagonal_Shape_int16_t`
`(ppl_const_Octagonal_Shape_int16_t_t pset, ppl_Polyhedron_t ph)` [**related**]
- 10.43.2.2** `int ppl_all_affine_ranking_functions_MS_Octagonal_Shape_int16_t_2` `(ppl_const -`
`Octagonal_Shape_int16_t_t pset_before, ppl_const_Octagonal_Shape_int16_t_t`
`pset_after, ppl_Polyhedron_t ph)` [**related**]
- 10.43.2.3** `int ppl_all_affine_ranking_functions_PR_Octagonal_Shape_int16_t`
`(ppl_const_Octagonal_Shape_int16_t_t pset, ppl_Polyhedron_t ph)` [**related**]
- 10.43.2.4** `int ppl_all_affine_ranking_functions_PR_Octagonal_Shape_int16_t_2` `(ppl_const -`
`Octagonal_Shape_int16_t_t pset_before, ppl_const_Octagonal_Shape_int16_t_t`
`pset_after, ppl_Polyhedron_t ph)` [**related**]
- 10.43.2.5** `int ppl_assign_Octagonal_Shape_int16_t_from_Octagonal_Shape_int16_t`
`(ppl_Octagonal_Shape_int16_t_t dst, ppl_const_Octagonal_Shape_int16_t_t src)`
[related]
- 10.43.2.6** `int ppl_delete_Octagonal_Shape_int16_t` `(ppl_const_Octagonal_Shape_int16_t_t ph)`
[related]
- 10.43.2.7** `int ppl_new_Octagonal_Shape_int16_t_from_BD_Shape_double`
`(ppl_Octagonal_Shape_int16_t_t * pph, ppl_const_BD_Shape_double_t ph)`
[related]
- 10.43.2.8** `int ppl_new_Octagonal_Shape_int16_t_from_BD_Shape_double_with_complexity`
`(ppl_Octagonal_Shape_int16_t_t * pph, ppl_const_BD_Shape_double_t ph, int`
`complexity)` [**related**]

- 10.43.2.9 `int ppl_new_Octagonal_Shape_int16_t_from_BD_Shape_float`
(`ppl_Octagonal_Shape_int16_t *pph`, `ppl_const_BD_Shape_float_t ph`) [`related`]
- 10.43.2.10 `int ppl_new_Octagonal_Shape_int16_t_from_BD_Shape_float_with_complexity`
(`ppl_Octagonal_Shape_int16_t_t *pph`, `ppl_const_BD_Shape_float_t ph`, `int complexity`) [`related`]
- 10.43.2.11 `int ppl_new_Octagonal_Shape_int16_t_from_BD_Shape_int16_t`

10.46.1 Detailed Description

Types and functions for [ppl_Octagonal_Shape_int8_t_tag](#).

10.46.2 Friends And Related Function Documentation

- 10.46.2.1** `int ppl_all_affine_ranking_functions_MS_Octagonal_Shape_int8_t`
`(ppl_const_Octagonal_Shape_int8_t_t pset, ppl_Polyhedron_t ph)` [**related**]
- 10.46.2.2** `int ppl_all_affine_ranking_functions_MS_Octagonal_Shape_int8_t_2` `(ppl_const_Octagonal_Shape_int8_t_t pset_before, ppl_const_Octagonal_Shape_int8_t_t pset_after, ppl_Polyhedron_t ph)` [**related**]
- 10.46.2.3** `int ppl_all_affine_ranking_functions_PR_Octagonal_Shape_int8_t`
`(ppl_const_Octagonal_Shape_int8_t_t pset, ppl_Polyhedron_t ph)` [**related**]
- 10.46.2.4** `int ppl_all_affine_ranking_functions_PR_Octagonal_Shape_int8_t_2` `(ppl_const_Octagonal_Shape_int8_t_t pset_before, ppl_const_Octagonal_Shape_int8_t_t pset_after, ppl_Polyhedron_t ph)` [**related**]
- 10.46.2.5** `int ppl_assign_Octagonal_Shape_int8_t_from_Octagonal_Shape_int8_t`
`(ppl_Octagonal_Shape_int8_t_t dst, ppl_const_Octagonal_Shape_int8_t_t src)`
[related]
- 10.46.2.6** `int ppl_delete_Octagonal_Shape_int8_t` `(ppl_const_Octagonal_Shape_int8_t_t ph)`
[related]
- 10.46.2.7** `int ppl_new_Octagonal_Shape_int8_t_from_BD_Shape_double`
`(ppl_Octagonal_Shape_int8_t_t * pph, ppl_const_BD_Shape_double_t ph)`
[related]
- 10.46.2.8** `int ppl_new_Octagonal_Shape_int8_t_from_BD_Shape_double_with_complexity`
`(ppl_Octagonal_Shape_int8_t_t * pph, ppl_const_BD_Shape_double_t ph, int complexity)` [**related**]

10.46.2.9 `int ppl_new_Octagonal_Shape_int8_t_from_BD_Shape_float`
(`ppl_Octagonal_Shape_int8_t_t * pph`, `ppl_const_BD_Shape_float_t ph`) [**related**]

10.46.2.10 `int ppl_new_Octagonal_Shape_int8_t_from_BD_Shape_float_with_complexity`
(`ppl_Octagonal_Shape_int8_t_t * pph`, `ppl_const_BD_Shape_float_t ph`, `int complexity`) [**related**]

10.46.2.11 `int ppl_new_Octagonal_Shape_int8_t_from_BD_Shape_int16_t`
(`ppl_Octagonal_Shape_int8_t_t * pph`, `ppl_const_BD_Shape_int16_t_t ph`) [**related**]

10.46.2.12 `int ppl_new_Octagonal_Shape_int8_t_from_BD_Shape_int16_t_with_complexity`
(`ppl_Octagonal_Shape_int8_t_t * pph`, `ppl_const_BD_Shape_int16_t_t ph`, `int complexity`) [**related**]

10.46.2.13 `int ppl_new_Octagonal_Shape_int8_t_from_BD_Shape_int32_t`
(`ppl_Octagonal_Shape_int8_t_t * pph`, `ppl_const_BD_Shape_int32_t_t ph`) [**related**]

10.46.2.14 `int ppl_new_Octagonal_Shape_int8_t_from_BD_Shape_int32_t_with_complexity`
(`ppl_Octagonal_Shape_int8_t_t * pph`, `ppl_const_BD_Shape_int32_t_t ph`, `int complexity`) [**related**]

10.46.2.15 `int ppl_new_Octagonal_Shape_int8_t_from_BD_Shape_int64_t`
(`ppl_Octagonal_Shape_int8_t_t * pph`, `ppl_const_BD_Shape_int64_t_t ph`) [**related**]

10.46.2.16 `int ppl_new_Octagonal_Shape_int8_t_from_BD_Shape_int64_t_with_complexity`
(`ppl_Octagonal_Shape_int8_t_t * pph`, `ppl_const_BD_Shape_int64_t_t ph`, `int complexity`) [**related**]

- 10.46.2.17 `int ppl_new_Octagonal_Shape_int8_t_from_BD_Shape_int8_t`
(`ppl_Octagonal_Shape_int8_t_t * pph`, `ppl_const_BD_Shape_int8_t_t ph`)
[related]
- 10.46.2.18 `int ppl_new_Octagonal_Shape_int8_t_from_BD_Shape_int8_t_with_complexity`
(`ppl_Octagonal_Shape_int8_t_t * pph`, `ppl_const_BD_Shape_int8_t_t ph`, `int complexity`) [related]
- 10.46.2.19 `int ppl_new_Octagonal_Shape_int8_t_from_BD_Shape_long_double`
(`ppl_Octagonal_Shape_int8_t_t * pph`, `ppl_const_BD_Shape_long_double_t ph`)
[related]
- 10.46.2.20 `int ppl_new_Octagonal_Shape_int8_t_from_BD_Shape_long_double_with_complexity`
(`ppl_Octagonal_Shape_int8_t_t * pph`, `ppl_const_BD_Shape_long_double_t ph`, `int complexity`) [related]
- 10.46.2.21 `int ppl_new_Octagonal_Shape_int8_t_from_BD_Shape_mpq_class`
(`ppl_Octagonal_Shape_int8_t_t * pph`, `ppl_const_BD_Shape_mpq_class_t ph`)
[related]

10.47.1 Detailed Description

Types and functions for [ppl_Octagonal_Shape_long_double_tag](#).

10.47.2 Friends And Related Function Documentation

10.47.2.1 `int ppl_all_affine_ranking_functions_MS_Octagonal_Shape_long_double`
`(ppl_const_Octagonal_Shape_long_double_t pset, ppl_Polyhedron_t ph)` [**related**]

10.47.2.2 `int ppl_all_affine_ranking_functions_MS_Octagonal_Shape_long_double_2`
`(ppl_const_Octagonal_Shape_long_double_t pset_before, ppl_const_`
`Octagonal_Shape_long_double_t pset_after, ppl_Polyhedron_t ph)`
[related]

10.47.2.3 `int ppl_all_affine_ranking_functions_PR_Octagonal_Shape_long_double`
`(ppl_const_Octagonal_Shape_long_double_t pset, ppl_Polyhedron_t ph)` [**related**]

10.47.2.4 `int ppl_all_affine_ranking_functions_PR_Octagonal_Shape_long_double_2`
`(ppl_const_Octagonal_Shape_long_double_t pset_before, ppl_const_`
`Octagonal_Shape_long_double_t pset_after, ppl_Polyhedron_t ph)`
[related]

10.47.2.5 `int ppl_assign_Octagonal_Shape_long_double_from_Octagonal_Shape_long_double`
`(ppl_Octagonal_Shape_long_double_t dst, ppl_const_Octagonal_Shape_long_double_t`
`src)` [**related**]

10.47.2.6 `int ppl_delete_Octagonal_Shape_long_double` `(ppl_const_Octagonal_Shape_long_`
`double_t ph)` [**related**]

10.47.2.7 `int ppl_new_Octagonal_Shape_long_double_from_BD_Shape_double`
`(ppl_Octagonal_Shape_long_double_t * pph, ppl_const_BD_Shape_double_t ph)`
[related]

10.47.2.8 `int ppl_new_Octagonal_Shape_long_double_from_BD_Shape_double_with_complexity`
`(ppl_Octagonal_Shape_long_double_t * pph, ppl_const_BD_Shape_double_t ph, int`
`complexity)` [**related**]

- 10.47.2.9 `int ppl_new_Octagonal_Shape_long_double_from_BD_Shape_float`
(`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_BD_Shape_float_t ph`)
[related]
- 10.47.2.10 `int ppl_new_Octagonal_Shape_long_double_from_BD_Shape_float_with_complexity`
(`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_BD_Shape_float_t ph`, `int complexity`) [related]
- 10.47.2.11 `int ppl_new_Octagonal_Shape_long_double_from_BD_Shape_int16_t`
(`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_BD_Shape_int16_t_t ph`)
[related]
- 10.47.2.12 `int ppl_new_Octagonal_Shape_long_double_from_BD_Shape_int16_t_with_complexity`
(`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_BD_Shape_int16_t_t ph`, `int complexity`) [related]
- 10.47.2.13 `int ppl_new_Octagonal_Shape_long_double_from_BD_Shape_int32_t`
(`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_BD_Shape_int32_t_t ph`)
[related]
- 10.47.2.14 `int ppl_new_Octagonal_Shape_long_double_from_BD_Shape_int32_t_with_complexity`
(`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_BD_Shape_int32_t_t ph`, `int complexity`) [related]
- 10.47.2.15 `int ppl_new_Octagonal_Shape_long_double_from_BD_Shape_int64_t`
(`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_BD_Shape_int64_t_t ph`)
[related]
- 10.47.2.16 `int ppl_new_Octagonal_Shape_long_double_from_BD_Shape_int64_t_with_complexity`
(`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_BD_Shape_int64_t_t ph`, `int complexity`) [related]

- 10.47.2.17 `int ppl_new_Octagonal_Shape_long_double_from_BD_Shape_int8_t`
 (`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_BD_Shape_int8_t_t ph`)
 [related]
- 10.47.2.18 `int ppl_new_Octagonal_Shape_long_double_from_BD_Shape_int8_t_with_complexity`
 (`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_BD_Shape_int8_t_t ph`, `int complexity`) [related]
- 10.47.2.19 `int ppl_new_Octagonal_Shape_long_double_from_BD_Shape_long_double`
 (`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_BD_Shape_long_double_t ph`)
 [related]
- 10.47.2.20 `int ppl_new_Octagonal_Shape_long_double_from_BD_Shape_long_double_with_complexity`
 (`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_BD_Shape_long_double_t ph`, `int complexity`) [related]
- 10.47.2.21 `int ppl_new_Octagonal_Shape_long_double_from_BD_Shape_mpq_class`
 (`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_BD_Shape_mpq_class_t ph`)
 [related]
- 10.47.2.22 `int ppl_new_Octagonal_Shape_long_double_from_BD_Shape_mpq_class_with_complexity`
 (`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_BD_Shape_mpq_class_t ph`, `int complexity`) [related]
- 10.47.2.23 `int ppl_new_Octagonal_Shape_long_double_from_BD_Shape_mpz_class`
 (`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_BD_Shape_mpz_class_t ph`)
 [related]
- 10.47.2.24 `int ppl_new_Octagonal_Shape_long_double_from_BD_Shape_mpz_class_with_complexity`
 (`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_BD_Shape_mpz_class_t ph`, `int complexity`) [related]

- 10.47.2.25 `int ppl_new_Octagonal_Shape_long_double_from_C_Polyhedron`
(`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_Polyhedron_t ph`)
[related]
- 10.47.2.26 `int ppl_new_Octagonal_Shape_long_double_from_C_Polyhedron_with_complexity`
(`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_Polyhedron_t ph`, `int complexity`) [related]
- 10.47.2.27 `int ppl_new_Octagonal_Shape_long_double_from_Congruence_System`
(`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_Congruence_System_t cs`)
[related]
- 10.47.2.28 `int ppl_new_Octagonal_Shape_long_double_from_Constraint_System`
(`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_Constraint_System_t cs`)
[related]
- 10.47.2.29 `int ppl_new_Octagonal_Shape_long_double_from_Double_Box`
(`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_Double_Box_t ph`)
[related]
- 10.47.2.30 `int ppl_new_Octagonal_Shape_long_double_from_Double_Box_with_complexity`
(`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_Double_Box_t ph`, `int complexity`) [related]
- 10.47.2.31 `int ppl_new_Octagonal_Shape_long_double_from_Float_Box`
(`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_Float_Box_t ph`) [related]
- 10.47.2.32 `int ppl_new_Octagonal_Shape_long_double_from_Float_Box_with_complexity`
(`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_Float_Box_t ph`, `int complexity`) [related]

- 10.47.2.33 `int ppl_new_Octagonal_Shape_long_double_from_Generator_System`
(`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_Generator_System_t cs`)
[related]
- 10.47.2.34 `int ppl_new_Octagonal_Shape_long_double_from_Grid` (`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_Grid_t ph`)
[related]
- 10.47.2.35 `int ppl_new_Octagonal_Shape_long_double_from_Grid_with_complexity`
(`ppl_Octagonal_Shape_long_double_t * pph`, `ppl_const_Grid_t ph`, `int complexity`)

10.48.1 Detailed Description

Types and functions for `ppl_Octagonal_Shape_mpq_class_tag`.

10.48.2 Friends And Related Function Documentation

10.48.2.1 `int ppl_all_affine_ranking_functions_MS_Octagonal_Shape_mpq_class`
(`ppl_const_Octagonal_Shape_mpq_class_t pset`, `ppl_Polyhedron_t ph`) [**related**]

10.48.2.2 `int ppl_all_affine_ranking_functions_MS_Octagonal_Shape_mpq_class_2` (`ppl_const_Octagonal_Shape_mpq_class_t pset_before`, `ppl_const_Octagonal_Shape_mpq_class_t pset_after`, `ppl_Polyhedron_t ph`) [**related**]

- 10.48.2.3** `int ppl_all_affine_ranking_functions_PR_Octagonal_Shape_mpq_class`
 (`ppl_const_Octagonal_Shape_mpq_class_t pset`, `ppl_Polyhedron_t ph`) [`related`]
- 10.48.2.4** `int ppl_all_affine_ranking_functions_PR_Octagonal_Shape_mpq_class_2` (`ppl_const_Octagonal_Shape_mpq_class_t pset_before`, `ppl_const_Octagonal_Shape_mpq_class_t pset_after`, `ppl_Polyhedron_t ph`) [`related`]
- 10.48.2.5** `int ppl_assign_Octagonal_Shape_mpq_class_from_Octagonal_Shape_mpq_class`
 (`ppl_Octagonal_Shape_mpq_class_t dst`, `ppl_const_Octagonal_Shape_mpq_class_t src`)
 [`related`]
- 10.48.2.6** `int ppl_delete_Octagonal_Shape_mpq_class` (`ppl_const_Octagonal_Shape_mpq_class_t ph`) [`related`]
- 10.48.2.7** `int ppl_new_Octagonal_Shape_mpq_class_from_BD_Shape_double`
 (`ppl_Octagonal_Shape_mpq_class_t * pph`, `ppl_const_BD_Shape_double_t ph`)
 [`related`]
- 10.48.2.8** `int ppl_new_Octagonal_Shape_mpq_class_from_BD_Shape_double_with_complexity`
 (`ppl_Octagonal_Shape_mpq_class_t * pph`, `ppl_const_BD_Shape_double_t ph`, `int complexity`) [`related`]
- 10.48.2.9** `int ppl_new_Octagonal_Shape_mpq_class_from_BD_Shape_float`
 (`ppl_Octagonal_Shape_mpq_class_t * pph`, `ppl_const_BD_Shape_float_t ph`)
 [`related`]
- 10.48.2.10** `int ppl_new_Octagonal_Shape_mpq_class_from_BD_Shape_float_with_complexity`
 (`ppl_Octagonal_Shape_mpq_class_t * pph`, `ppl_const_BD_Shape_float_t ph`, `int complexity`) [`related`]

- 10.48.2.11 `int ppl_new_Octagonal_Shape_mpq_class_from_BD_Shape_int16_t`
 (`ppl_Octagonal_Shape_mpq_class_t * pph`, `ppl_const_BD_Shape_int16_t_t ph`)
 [related]
- 10.48.2.12 `int ppl_new_Octagonal_Shape_mpq_class_from_BD_Shape_int16_t_with_complexity`
 (`ppl_Octagonal_Shape_mpq_class_t * pph`, `ppl_const_BD_Shape_int16_t_t ph`, `int complexity`) [related]
- 10.48.2.13 `int ppl_new_Octagonal_Shape_mpq_class_from_BD_Shape_int32_t`
 (`ppl_Octagonal_Shape_mpq_class_t * pph`, `ppl_const_BD_Shape_int32_t_t ph`)
 [related]
- 10.48.2.14 `int ppl_new_Octagonal_Shape_mpq_class_from_BD_Shape_int32_t_with_complexity`
 (`ppl_Octagonal_Shape_mpq_class_t * pph`, `ppl_const_BD_Shape_int32_t_t ph`, `int complexity`) [related]
- 10.48.2.15 `int ppl_new_Octagonal_Shape_mpq_class_from_BD_Shape_int64_t`
 (`ppl_Octagonal_Shape_mpq_class_t * pph`, `ppl_const_BD_Shape_int64_t_t ph`)
 [related]
- 10.48.2.16 `int ppl_new_Octagonal_Shape_mpq_class_from_BD_Shape_int64_t_with_complexity`
 (`ppl_Octagonal_Shape_mpq_class_t * pph`, `ppl_const_BD_Shape_int64_t_t ph`, `int complexity`) [related]
- 10.48.2.17 `int ppl_new_Octagonal_Shape_mpq_class_from_BD_Shape_int8_t`
 (`ppl_Octagonal_Shape_mpq_class_t * pph`, `ppl_const_BD_Shape_int8_t_t ph`)
 [related]
- 10.48.2.18 `int ppl_new_Octagonal_Shape_mpq_class_from_BD_Shape_int8_t_with_complexity`
 (`ppl_Octagonal_Shape_mpq_class_t * pph`, `ppl_const_BD_Shape_int8_t_t ph`, `int complexity`) [related]

- 10.48.2.19 `int ppl_new_Octagonal_Shape_mpq_class_from_BD_Shape_long_double`
 (`ppl_Octagonal_Shape_mpq_class_t * pph`, `ppl_const_BD_Shape_long_double_t ph`)
 [related]
- 10.48.2.20 `int ppl_new_Octagonal_Shape_mpq_class_from_BD_Shape_long_double_with_complexity` (`ppl_Octagonal_Shape_mpq_class_t * pph`,
`ppl_const_BD_Shape_long_double_t ph`, `int complexity`) [related]
- 10.48.2.21 `int ppl_new_Octagonal_Shape_mpq_class_from_BD_Shape_mpq_class`
 (`ppl_Octagonal_Shape_mpq_class_t * pph`, `ppl_const_BD_Shape_mpq_class_t ph`)
 [related]
- 10.48.2.22 `int ppl_new_Octagonal_Shape_mpq_class_from_BD_Shape_mpq_class_with_complexity` (`ppl_Octagonal_Shape_mpq_class_t * pph`,
`ppl_const_BD_Shape_mpq_class_t ph`, `int complexity`) [related]
- 10.48.2.23 `int ppl_new_Octagonal_Shape_mpq_class_from_BD_Shape_mpz_class`
 (`ppl_Octagonal_Shape_mpq_class_t * pph`, `ppl_const_BD_Shape_mpz_class_t ph`)
 [related]
- 10.48.2.24 `int ppl_new_Octagonal_Shape_mpq_class_from_BD_Shape_mpz_class_with_complexity` (`ppl_Octagonal_Shape_mpq_class_t * pph`,
`ppl_const_BD_Shape_mpz_class_t ph`, `int complexity`) [related]
- 10.48.2.25 `int ppl_new_Octagonal_Shape_mpq_class_from_C_Polyhedron`
 (`ppl_Octagonal_Shape_mpq_class_t * pph`, `ppl_const_Polyhedron_t ph`) [related]
- 10.48.2.26 `int ppl_new_Octagonal_Shape_mpq_class_from_C_Polyhedron_with_complexity`
 (`ppl_Octagonal_Shape_mpq_class_t * pph`, `ppl_const_Polyhedron_t ph`, `int complexity`) [related]

- 10.48.2.27 `int ppl_new_Octagonal_Shape_mpq_class_from_Congruence_System`
 (`ppl_Octagonal_Shape_mpq_class_t * pph`, `ppl_const_Congruence_System_t cs`)
 [related]
- 10.48.2.28 `int ppl_new_Octagonal_Shape_mpq_class_from_Constraint_System`

Types and functions for PIP problems.

```
#include <ppl_c.h>
```

Related Functions

(Note that these are not member functions.)

Symbolic Constants

- int [PPL_PIP_PROBLEM_STATUS_UNFEASIBLE](#)
Code of the "unfeasible PIP problem" status.
- int [PPL_PIP_PROBLEM_STATUS_OPTIMIZED](#)
Code of the "optimized PIP problem" status.
- int [PPL_PIP_PROBLEM_CONTROL_PARAMETER_NAME_CUTTING_STRATEGY](#)
Code for the PIP problem's "cutting strategy" control parameter name.
- int [PPL_PIP_PROBLEM_CONTROL_PARAMETER_NAME_PIVOT_ROW_STRATEGY](#)
Code for the PIP problem's "pivot row strategy" control parameter name.
- int [PPL_PIP_PROBLEM_CONTROL_PARAMETER_CUTTING_STRATEGY_FIRST](#)
Code of PIP problem's "first" cutting strategy.
- int [PPL_PIP_PROBLEM_CONTROL_PARAMETER_CUTTING_STRATEGY_DEEPEST](#)
Code of PIP problem's "deepest" cutting strategy.
- int [PPL_PIP_PROBLEM_CONTROL_PARAMETER_CUTTING_STRATEGY_ALL](#)
Code of PIP problem's "all" cutting strategy.
- int [PPL_PIP_PROBLEM_CONTROL_PARAMETER_PIVOT_ROW_STRATEGY_FIRST](#)
Code of PIP problem's "first" pivot row strategy.
- int [PPL_PIP_PROBLEM_CONTROL_PARAMETER_PIVOT_ROW_STRATEGY_MAX_COLUMN](#)
Code of PIP problem's "max column" pivot row strategy.

Constructors, Assignment and Destructor

- `int ppl_new_PIP_Problem_from_space_dimension` (`ppl_PIP_Problem_t *ppip`, `ppl_dimension_type d`)
Builds a trivial PIP problem of dimension d and writes a handle to it at address $ppip$.
- `int ppl_new_PIP_Problem_from_PIP_Problem` (`ppl_PIP_Problem_t *ppip`, `ppl_const_PIP_Problem_t pip`)
Builds a PIP problem that is a copy of pip ; writes a handle for the newly created problem at address $ppip$.
- `int ppl_assign_PIP_Problem_from_PIP_Problem` (`ppl_PIP_Problem_t dst`, `ppl_const_PIP_Problem_t src`)
Assigns a copy of the PIP problem src to dst .
- `int ppl_new_PIP_Problem_from_constraints` (`ppl_PIP_Problem_t *ppip`, `ppl_dimension_type d`, `ppl_Constraint_System_const_iterator_t first`, `ppl_Constraint_System_const_iterator_t last`, `size_t n`, `ppl_dimension_type ds[]`)
Builds a PIP problem having space dimension d from the sequence of constraints in the range $[first, last)$; the n dimensions whose indices occur in ds are interpreted as parameters.
- `int ppl_delete_PIP_Problem` (`ppl_const_PIP_Problem_t pip`)
Invalidates the handle pip : this makes sure the corresponding resources will eventually be released.

Functions that Do Not Modify the PIP_Problem

- `int ppl_PIP_Problem_space_dimension` (`ppl_const_PIP_Problem_t pip`, `ppl_dimension_type *m`)
Writes to m the dimension of the vector space enclosing pip .
- `int ppl_PIP_Problem_number_of_parameter_space_dimensions` (`ppl_const_PIP_Problem_t pip`, `ppl_dimension_type *m`)
Writes to m the number of parameter space dimensions of pip .
- `int ppl_PIP_Problem_parameter_space_dimensions` (`ppl_const_PIP_Problem_t pip`, `ppl_dimension_type ds[]`)
Writes in the first positions of the array ds all the parameter space dimensions of problem pip . If the array is not big enough to hold all of the parameter space dimensions, the behavior is undefined.
- `int ppl_PIP_Problem_get_big_parameter_dimension` (`ppl_const_PIP_Problem_t pip`, `ppl_dimension_type *pd`)
Writes into $*pd$ the big parameter dimension of PIP problem pip .
- `int ppl_PIP_Problem_number_of_constraints` (`ppl_const_PIP_Problem_t pip`, `ppl_dimension_type *m`)
Writes to m the number of constraints defining the feasible region of pip .
- `int ppl_PIP_Problem_constraint_at_index` (`ppl_const_PIP_Problem_t pip`, `ppl_dimension_type i`, `ppl_const_Constraint_t *pc`)
Writes at address pc a const handle to the i -th constraint defining the feasible region of the PIP problem pip .

- `int ppl_PIP_Problem_total_memory_in_bytes` (`ppl_const_PIP_Problem_t pip`, `size_t *sz`)
Writes into `*sz` the size in bytes of the memory occupied by `pip`.
- `int ppl_PIP_Problem_external_memory_in_bytes` (`ppl_const_PIP_Problem_t pip`, `size_t *sz`)
Writes into `*sz` the size in bytes of the memory managed by `pip`.
- `int ppl_PIP_Problem_OK` (`ppl_const_PIP_Problem_t pip`)
Returns a positive integer if `pip` is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if `pip` is broken. Useful for debugging purposes.

Functions that May Modify the PIP_Problem

- `int ppl_PIP_Problem_clear` (`ppl_PIP_Problem_t pip`)
Resets the PIP problem to be a trivial problem of space dimension 0.
- `int ppl_PIP_Problem_add_space_dimensions_and_embed` (`ppl_PIP_Problem_t pip`, `ppl_dimension_type pip_vars`, `ppl_dimension_type pip_params`)
Adds `pip_vars + pip_params` new space dimensions and embeds the PIP problem `pip` in the new vector space.
- `int ppl_PIP_Problem_add_to_parameter_space_dimensions` (`ppl_PIP_Problem_t pip`, `ppl_dimension_type ds[]`, `size_t n`)
Sets the space dimensions that are specified in first `n` positions of the array `ds` to be parameter dimensions of problem `pip`. The presence of duplicates in `ds` is a waste but an innocuous one.
- `int ppl_PIP_Problem_set_big_parameter_dimension` (`ppl_PIP_Problem_t pip`, `ppl_dimension_type d`)
Sets the big parameter dimension of PIP problem `pip` to `d`.
- `int ppl_PIP_Problem_add_constraint` (`ppl_PIP_Problem_t pip`, `ppl_const_Constraint_t c`)
Modifies the feasible region of the PIP problem `pip` by adding a copy of the constraint `c`.
- `int ppl_PIP_Problem_add_constraints` (`ppl_PIP_Problem_t pip`, `ppl_const_Constraint_System_t cs`)
Modifies the feasible region of the PIP problem `pip` by adding a copy of the constraints in `cs`.

Computing and Printing the Solution of the PIP_Problem

- `int ppl_PIP_Problem_is_satisfiable` (`ppl_const_PIP_Problem_t pip`)
Returns a positive integer if `pip` is satisfiable and an optimal solution can be found; returns 0 otherwise.
- `int ppl_PIP_Problem_solve` (`ppl_const_PIP_Problem_t pip`)
Solves the PIP problem `pip`, returning an exit status.
- `int ppl_PIP_Problem_solution` (`ppl_const_PIP_Problem_t pip`, `ppl_const_PIP_Tree_Node_t *pip_tree`)
Writes to `pip_tree` a solution for `pip`, if it exists.
- `int ppl_PIP_Problem_optimizing_solution` (`ppl_const_PIP_Problem_t pip`, `ppl_const_PIP_Tree_Node_t *pip_tree`)
Writes to `pip_tree` an optimizing solution for `pip`, if it exists.

Querying/Setting Control Parameters

- int `ppl_PIP_Problem_get_control_parameter` (`ppl_const_PIP_Problem_t` pip, int name)
Returns the value of control parameter name in problem pip.
- int `ppl_PIP_Problem_set_control_parameter` (`ppl_PIP_Problem_t` pip, int value)
Sets control parameter value in problem pip.

10.51.1 Detailed Description

Types and functions for PIP problems. The types and functions for PIP problems provide an interface towards *PIP_Problem*.

10.51.2 Friends And Related Function Documentation

10.51.2.1 int `ppl_assign_PIP_Problem_from_PIP_Problem` (`ppl_PIP_Problem_t` dst, `ppl_const_PIP_Problem_t` src) [**related**]

Assigns a copy of the PIP problem src to dst.

Definition at line 2180 of file `ppl_c_implementation_common.cc`.

10.51.2.2 int `ppl_delete_PIP_Problem` (`ppl_const_PIP_Problem_t` pip) [**related**]

Invalidates the handle pip: this makes sure the corresponding resources will eventually be released.

Definition at line 2190 of file `ppl_c_implementation_common.cc`.

10.51.2.3 int `ppl_new_PIP_Problem_from_constraints` (`ppl_PIP_Problem_t` * ppip, `ppl_dimension_type` d, `ppl_Constraint_System_const_iterator_t` first, `ppl_Constraint_System_const_iterator_t` last, `size_t` n, `ppl_dimension_type` ds[]) [**related**]

Builds a PIP problem having space dimension d from the sequence of constraints in the range [first, last); the n dimensions whose indices occur in ds are interpreted as parameters.

Definition at line 2164 of file `ppl_c_implementation_common.cc`.

10.51.2.4 int `ppl_new_PIP_Problem_from_PIP_Problem` (`ppl_PIP_Problem_t` * ppip, `ppl_const_PIP_Problem_t` pip) [**related**]

Builds a PIP problem that is a copy of pip; writes a handle for the newly created problem at address ppip.

Definition at line 2154 of file `ppl_c_implementation_common.cc`.

10.51.2.5 `int ppl_new_PIP_Problem_from_space_dimension (ppl_PIP_Problem_t * ppip,
ppl_dimension_type d)` [**related**]

Builds a trivial PIP problem of dimension *d* and writes a handle to it at address *ppip*.

Definition at line 2146 of file `ppl_c_implementation_common.cc`.

10.51.2.6 `int ppl_PIP_Problem_add_constraint (ppl_PIP_Problem_t pip, ppl_const_Constraint_t
c)` [**related**]

Modifies the feasible region of the PIP problem *pip* by adding a copy of the constraint *c*.

Definition at line 2278 of file `ppl_c_implementation_common.cc`.

10.51.2.7 `int ppl_PIP_Problem_add_constraints (ppl_PIP_Problem_t pip,
ppl_const_Constraint_System_t cs)` [**related**]

Modifies the feasible region of the PIP problem *pip* by adding a copy of the constraints in *cs*.

Definition at line 2288 of file `ppl_c_implementation_common.cc`.

10.51.2.8 `int ppl_PIP_Problem_add_space_dimensions_and_embed (ppl_PIP_Problem_t pip,
ppl_dimension_type pip_vars, ppl_dimension_type pip_params)` [**related**]

Adds *pip_vars* + *pip_params* new space dimensions and embeds the PIP problem *pip* in the new vector space.

Parameters

pip The PIP problem to be embedded in the new vector space.

pip_vars The number of space dimensions to add that are interpreted as PIP problem variables (i.e., non parameters). These are added *before* adding the *pip_params* parameters.

pip_params The number of space dimensions to add that are interpreted as PIP problem parameters. These are added *after* having added the *pip_vars* problem variables.

The new space dimensions will be those having the highest indexes in the new PIP problem; they are initially unconstrained.

Definition at line 2256 of file `ppl_c_implementation_common.cc`.

10.51.2.9 `int ppl_PIP_Problem_add_to_parameter_space_dimensions (ppl_PIP_Problem_t pip,
ppl_dimension_type ds[], size_t n)` [**related**]

Sets the space dimensions that are specified in first *n* positions of the array *ds* to be parameter dimensions of problem *pip*. The presence of duplicates in *ds* is a waste but an innocuous one.

Definition at line 2266 of file `ppl_c_implementation_common.cc`.

10.51.2.10 `int ppl_PIP_Problem_clear (ppl_PIP_Problem_t pip)` [**related**]

Resets the PIP problem to be a trivial problem of space dimension 0.

Definition at line 2250 of file `ppl_c_implementation_common.cc`.

10.51.2.11 `int ppl_PIP_Problem_constraint_at_index (ppl_const_PIP_Problem_t pip, ppl_dimension_type i, ppl_const_Constraint_t * pc)` [**related**]

Writes at address `pc` a const handle to the `i`-th constraint defining the feasible region of the PIP problem `pip`.

Definition at line 2235 of file `ppl_c_implementation_common.cc`.

10.51.2.12 `int PPL_PIP_PROBLEM_CONTROL_PARAMETER_CUTTING_STRATEGY_ALL` [**related**]

Code of PIP problem's "all" cutting strategy.

Definition at line 2523 of file `ppl_c.h`.

10.51.2.13 `int PPL_PIP_PROBLEM_CONTROL_PARAMETER_CUTTING_STRATEGY_- DEEPEST` [**related**]

Code of PIP problem's "deepest" cutting strategy.

Definition at line 2518 of file `ppl_c.h`.

10.51.2.14 `int PPL_PIP_PROBLEM_CONTROL_PARAMETER_CUTTING_STRATEGY_- FIRST` [**related**]

Code of PIP problem's "first" cutting strategy.

Definition at line 2513 of file `ppl_c.h`.

10.51.2.15 `int PPL_PIP_PROBLEM_CONTROL_PARAMETER_NAME_CUTTING_- STRATEGY` [**related**]

Code for the PIP problem's "cutting strategy" control parameter name.

Definition at line 2503 of file `ppl_c.h`.

10.51.2.16 `int PPL_PIP_PROBLEM_CONTROL_PARAMETER_NAME_PIVOT_ROW_STRATEGY` [related]

Code for the PIP problem's "pivot row strategy" control parameter name.

Definition at line 2508 of file `ppl_c.h`.

10.51.2.17 `int PPL_PIP_PROBLEM_CONTROL_PARAMETER_PIVOT_ROW_STRATEGY_FIRST` [related]

Code of PIP problem's "first" pivot row strategy.

Definition at line 2528 of file `ppl_c.h`.

10.51.2.18 `int PPL_PIP_PROBLEM_CONTROL_PARAMETER_PIVOT_ROW_STRATEGY_MAX_COLUMN` [related]

Code of PIP problem's "max column" pivot row strategy.

Definition at line 2533 of file `ppl_c.h`.

10.51.2.19 `int ppl_PIP_Problem_external_memory_in_bytes (ppl_const_PIP_Problem_t pip, size_t * sz)` [related]

Writes into `*sz` the size in bytes of the memory managed by `pip`.

Definition at line 2373 of file `ppl_c_implementation_common.cc`.

10.51.2.20 `int ppl_PIP_Problem_get_big_parameter_dimension (ppl_const_PIP_Problem_t pip, ppl_dimension_type * pd)` [related]

Writes into `*pd` the big parameter dimension of PIP problem `pip`.

Definition at line 2349 of file `ppl_c_implementation_common.cc`.

10.51.2.21 `int ppl_PIP_Problem_get_control_parameter (ppl_const_PIP_Problem_t pip, int name)` [related]

Returns the value of control parameter `name` in problem `pip`.

Definition at line 2330 of file `ppl_c_implementation_common.cc`.

10.51.2.22 `int ppl_PIP_Problem_is_satisfiable (ppl_const_PIP_Problem_t pip)` **[related]**

Returns a positive integer if `pip` is satisfiable and an optimal solution can be found; returns 0 otherwise.

Definition at line 2297 of file `ppl_c_implementation_common.cc`.

10.51.2.23 `int ppl_PIP_Problem_number_of_constraints (ppl_const_PIP_Problem_t pip, ppl_dimension_type * m)` **[related]**

Writes to `m` the number of constraints defining the feasible region of `pip`.

Definition at line 2226 of file `ppl_c_implementation_common.cc`.

Referenced by `ppl_PIP_Problem_constraint_at_index()`.

10.51.2.24 `int ppl_PIP_Problem_number_of_parameter_space_dimensions (ppl_const_PIP_Problem_t pip, ppl_dimension_type * m)` **[related]**

Writes to `m` the number of parameter space dimensions of `pip`.

Definition at line 2206 of file `ppl_c_implementation_common.cc`.

10.51.2.25 `int ppl_PIP_Problem_OK (ppl_const_PIP_Problem_t pip)` **[related]**

Returns a positive integer if `pip` is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if `pip` is broken. Useful for debugging purposes.

Definition at line 2324 of file `ppl_c_implementation_common.cc`.

10.51.2.26 `int ppl_PIP_Problem_optimizing_solution (ppl_const_PIP_Problem_t pip, ppl_const_PIP_Tree_Node_t * pip_tree)` **[related]**

Writes to `pip_tree` an optimizing solution for `pip`, if it exists.

Definition at line 2316 of file `ppl_c_implementation_common.cc`.

10.51.2.27 `int ppl_PIP_Problem_parameter_space_dimensions (ppl_const_PIP_Problem_t pip, ppl_dimension_type ds[])` **[related]**

Writes in the first positions of the array `ds` all the parameter space dimensions of problem `pip`. If the array is not big enough to hold all of the parameter space dimensions, the behavior is undefined.

Definition at line 2214 of file `ppl_c_implementation_common.cc`.

10.51.2.28 `int ppl_PIP_Problem_set_big_parameter_dimension (ppl_PIP_Problem_t pip,
ppl_dimension_type d)` [**related**]

Sets the big parameter dimension of PIP problem *pip* to *d*.

Definition at line 2357 of file `ppl_c_implementation_common.cc`.

10.51.2.29 `int ppl_PIP_Problem_set_control_parameter (ppl_PIP_Problem_t pip, int value)`
[**related**]

Sets control parameter *value* in problem *pip*.

Definition at line 2339 of file `ppl_c_implementation_common.cc`.

10.51.2.30 `int ppl_PIP_Problem_solution (ppl_const_PIP_Problem_t pip,
ppl_const_PIP_Tree_Node_t *pip_tree)` [**related**]

Writes to *pip_tree* a solution for *pip*, if it exists.

Definition at line 2308 of file `ppl_c_implementation_common.cc`.

10.51.2.31 `int ppl_PIP_Problem_solve (ppl_const_PIP_Problem_t pip)` [**related**]

Solves the PIP problem *pip*, returning an exit status.

Returns

`PPL_PIP_PROBLEM_STATUS_UNFEASIBLE` if the PIP problem is not satisfiable; `PPL_PIP_PROBLEM_STATUS_OPTIMIZED` if the PIP problem admits an optimal solution.

Definition at line 2302 of file `ppl_c_implementation_common.cc`.

10.51.2.32 `int ppl_PIP_Problem_space_dimension (ppl_const_PIP_Problem_t pip,
ppl_dimension_type *m)` [**related**]

Writes to *m* the dimension of the vector space enclosing *pip*.

The vector space dimensions includes both the problem variables and the problem parameters, but they do not include the artificial parameters.

Definition at line 2197 of file `ppl_c_implementation_common.cc`.

10.51.2.33 `int PPL_PIP_PROBLEM_STATUS_OPTIMIZED` [**related**]

Code of the "optimized PIP problem" status.

Definition at line 2498 of file `ppl_c.h`.

10.51.2.34 `int PPL_PIP_PROBLEM_STATUS_UNFEASIBLE` [related]

Code of the "unfeasible PIP problem" status.

Definition at line 2493 of file `ppl_c.h`.

10.51.2.35 `int ppl_PIP_Problem_total_memory_in_bytes (ppl_const_PIP_Problem_t pip, size_t * sz)` [related]

Writes into `*sz` the size in bytes of the memory occupied by `pip`.

Definition at line 2365 of file `ppl_c_implementation_common.cc`.

The documentation for this interface was generated from the following file:

- [ppl_c.h](#)

10.52 `ppl_PIP_Solution_Node_tag` Interface Reference

Types and functions for PIP solution nodes.

```
#include <ppl_c.h>
```

Related Functions

(Note that these are not member functions.)

- [int ppl_PIP_Solution_Node_get_parametric_values](#) (`ppl_const_PIP_Solution_Node_t pip_sol`, [ppl_dimension_type](#) `var`, `ppl_const_Linear_Expression_t *le`)

Writes to `le` a const pointer to the parametric expression of the values of variable `var` in solution node `pip_sol`.

10.52.1 Detailed Description

Types and functions for PIP solution nodes. The types and functions for solution nodes provide an interface towards *PIP_Solution_Node*.

10.52.2 Friends And Related Function Documentation

10.52.2.1 `int ppl_PIP_Solution_Node_get_parametric_values (ppl_const_PIP_Solution_Node_t pip_sol, ppl_dimension_type var, ppl_const_Linear_Expression_t *le)` [related]

Writes to `le` a const pointer to the parametric expression of the values of variable `var` in solution node `pip_sol`.

The linear expression assigned to `le` will only refer to (problem or artificial) parameters.

Parameters

- pip_sol* The solution tree node.
- var* The variable which is queried about.
- le* The returned expression for variable `var`.

Returns

PPL_ERROR_INVALID_ARGUMENT Returned if `var` is dimension-incompatible with `*this` or if `var` is a problem parameter.

Definition at line 2445 of file `ppl_c_implementation_common.cc`.

The documentation for this interface was generated from the following file:

10.59.1 Detailed Description

Types and functions for [ppl_Pointset_Powerset_BD_Shape_float_tag](#).

10.59.2 Friends And Related Function Documentation

10.59.2.1 `int ppl_delete_Pointset_Powerset_BD_Shape_float (ppl_const_Pointset_Powerset_BD_Shape_float_t ph)` [**related**]

10.59.2.2 `int ppl_new_Pointset_Powerset_BD_Shape_float_from_BD_Shape_float (ppl_Pointset_Powerset_BD_Shape_float_t * pph, ppl_const_BD_Shape_float_t ph)` [**related**]

10.59.2.3 `int ppl_new_Pointset_Powerset_BD_Shape_float_from_BD_Shape_float_with_complexity (ppl_Pointset_Powerset_BD_Shape_float_t * pph, ppl_const_BD_Shape_float_t ph, int complexity)` [**related**]

10.59.2.4 `int ppl_new_Pointset_Powerset_BD_Shape_float_from_Congruence_System (ppl_Pointset_Powerset_BD_Shape_float_t * pph, ppl_const_Congruence_System_t cs)` [**related**]

10.59.2.5 `int ppl_new_Pointset_Powerset_BD_Shape_float_from_Constraint_System (ppl_Pointset_Powerset_BD_Shape_float_t * pph, ppl_const_Constraint_System_t cs)` [**related**]

10.59.2.6 `int ppl_new_Pointset_Powerset_BD_Shape_float_from_Pointset_Powerset_BD_Shape_float (ppl_Pointset_Powerset_BD_Shape_float_t * pph, ppl_const_Pointset_Powerset_BD_Shape_float_t ph)` [**related**]

10.59.2.7 `int ppl_new_Pointset_Powerset_BD_Shape_float_from_Pointset_Powerset_BD_Shape_float_with_complexity (ppl_Pointset_Powerset_BD_Shape_float_t * pph, ppl_const_Pointset_Powerset_BD_Shape_float_t ph, int complexity)` [**related**]

10.59.2.8 `int ppl_new_Pointset_Powerset_BD_Shape_float_from_space_dimension (ppl_Pointset_Powerset_BD_Shape_float_t * pph, ppl_dimension_type d, int empty)` [**related**]

- 10.59.2.9 `int ppl_Pointset_Powerset_BD_Shape_float_add_congruence (ppl_Pointset_Powerset_BD_Shape_float_t ph, ppl_const_Congruence_t c)`
[related]
- 10.59.2.10 `int ppl_Pointset_Powerset_BD_Shape_float_add_congruences (ppl_Pointset_Powerset_BD_Shape_float_t ph, ppl_const_Congruence_System_t cs)`
[related]
- 10.59.2.11 `int ppl_Pointset_Powerset_BD_Shape_float_add_constraint (ppl_Pointset_Powerset_BD_Shape_float_t ph, ppl_const_Constraint_t c)`
[related]
- 10.59.2.12 `int ppl_Pointset_Powerset_BD_Shape_float_add_constraints (ppl_Pointset_Powerset_BD_Shape_float_t ph, ppl_const_Constraint_System_t cs)`
[related]
- 10.59.2.13 `int ppl_Pointset_Powerset_BD_Shape_float_add_disjunct (ppl_Pointset_Powerset_BD_Shape_float_t ps, ppl_const_BD_Shape_float_t d)`
[related]
- 10.59.2.14 `int ppl_Pointset_Powerset_BD_Shape_float_add_space_dimensions_and_embed (ppl_Pointset_Powerset_BD_Shape_float_t ph, ppl_dimension_type d)` [related]
- 10.59.2.15 `int ppl_Pointset_Powerset_BD_Shape_float_add_space_dimensions_and_project (ppl_Pointset_Powerset_BD_Shape_float_t ph, ppl_dimension_type d)` [related]
- 10.59.2.16 `int ppl_Pointset_Powerset_BD_Shape_float_affine_dimension (ppl_const_Pointset_Powerset_BD_Shape_float_t ph, ppl_dimension_type * m)`
[related]
