The documentation for this interface was generated from the following file:

- [ppl_c.h](#)

10.81 [ppl_Pointset_Powerset_C_Polyhedron_const_iterator_tag](#) Interface Reference

Types and functions for iterating on the disjuncts of a const [ppl_Pointset_Powerset_C_Polyhedron_tag](#).

```
#include <ppl_c.h>
```

Related Functions

(Note that these are not member functions.)

Construction, Initialization and Destruction

- `int ppl\_new\_Pointset\_Powerset\_C\_Polyhedron\_const\_iterator (ppl\_Pointset\_Powerset\_C\_Polyhedron\_const\_iterator\_t *pit)`
Builds a new 'const iterator' and writes a handle to it at address `pit`.
- `int ppl\_new\_Pointset\_Powerset\_C\_Polyhedron\_const\_iterator\_from\_const\_iterator (ppl\_Pointset\_Powerset\_C\_Polyhedron\_const\_iterator\_t *pit, ppl\_const\_Pointset\_Powerset\_C\_Polyhedron\_const\_iterator\_t y)`
Builds a copy of `y` and writes a handle to it at address `pit`.
- `int ppl\_Pointset\_Powerset\_C\_Polyhedron\_const\_iterator\_begin (ppl\_const\_Pointset\_Powerset\_C\_Polyhedron\_t ps, ppl\_Pointset\_Powerset\_C\_Polyhedron\_const\_iterator\_t psit)`
Assigns to `psit` a const iterator "pointing" to the beginning of the sequence of disjuncts of `ps`.
- `int ppl\_Pointset\_Powerset\_C\_Polyhedron\_const\_iterator\_end (ppl\_const\_Pointset\_Powerset\_C\_Polyhedron\_t ps, ppl\_Pointset\_Powerset\_C\_Polyhedron\_const\_iterator\_t psit)`
Assigns to `psit` a const iterator "pointing" past the end of the sequence of disjuncts of `ps`.
- `int ppl\_delete\_Pointset\_Powerset\_C\_Polyhedron\_const\_iterator (ppl\_const\_Pointset\_Powerset\_C\_Polyhedron\_const\_iterator\_t it)`
Invalidates the handle `it`: this makes sure the corresponding resources will eventually be released.

Dereferencing, Increment, Decrement and Equality Testing

- `int ppl\_Pointset\_Powerset\_C\_Polyhedron\_const\_iterator\_dereference (ppl\_const\_Pointset\_Powerset\_C\_Polyhedron\_const\_iterator\_t it, ppl\_const\_Polyhedron\_t *d)`
Dereferences `it` writing a const handle to the resulting disjunct at address `d`.
- `int ppl\_Pointset\_Powerset\_C\_Polyhedron\_const\_iterator\_increment (ppl\_Pointset\_Powerset\_C\_Polyhedron\_const\_iterator\_t it)`
Increments `it` so that it "points" to the next disjunct.
- `int ppl\_Pointset\_Powerset\_C\_Polyhedron\_const\_iterator\_decrement (ppl\_Pointset\_Powerset\_C\_Polyhedron\_const\_iterator\_t it)`
Decrements `it` so that it "points" to the previous disjunct.
- `int ppl\_Pointset\_Powerset\_C\_Polyhedron\_const\_iterator\_equal\_test (ppl\_const\_Pointset\_Powerset\_C\_Polyhedron\_const\_iterator\_t x, ppl\_const\_Pointset\_Powerset\_C\_Polyhedron\_const\_iterator\_t y)`

Returns a positive integer if the iterators corresponding to x and y are equal; returns 0 if they are different.

10.81.1 Detailed Description

Types and functions for iterating on the disjuncts of a const [ppl_Pointset_Powerset_C_Polyhedron_tag](#).

10.81.2 Friends And Related Function Documentation

10.81.2.1 `int ppl_delete_Pointset_Powerset_C_Polyhedron_const_iterator
(ppl_const_Pointset_Powerset_C_Polyhedron_const_iterator_t it) [related]`

Invalidates the handle `it`: this makes sure the corresponding resources will eventually be released.

10.81.2.2 `int ppl_new_Pointset_Powerset_C_Polyhedron_const_iterator
(ppl_Pointset_Powerset_C_Polyhedron_const_iterator_t * pit) [related]`

Builds a new 'const iterator' and writes a handle to it at address `pit`.

10.81.2.3 `int ppl_new_Pointset_Powerset_C_Polyhedron_const_iterator_from_-
const_iterator (ppl_Pointset_Powerset_C_Polyhedron_const_iterator_t * pit,
ppl_const_Pointset_Powerset_C_Polyhedron_const_iterator_t y) [related]`

Builds a copy of `y` and writes a handle to it at address `pit`.

10.81.2.4 `int ppl_Pointset_Powerset_C_Polyhedron_const_iterator_begin (ppl_const_Pointset_-
Powerset_C_Polyhedron_t ps, ppl_Pointset_Powerset_C_Polyhedron_const_iterator_t
psit) [related]`

Assigns to `psit` a const iterator "pointing" to the beginning of the sequence of disjuncts of `ps`.

10.81.2.5 `int ppl_Pointset_Powerset_C_Polyhedron_const_iterator_decrement
(ppl_Pointset_Powerset_C_Polyhedron_const_iterator_t it) [related]`

Decrements `it` so that it "points" to the previous disjunct.

10.81.2.6 `int ppl_Pointset_Powerset_C_Polyhedron_const_iterator_dereference
(ppl_const_Pointset_Powerset_C_Polyhedron_const_iterator_t it,
ppl_const_Polyhedron_t * d) [related]`

Dereferences `it` writing a const handle to the resulting disjunct at address `d`.

Warning

On exit, the disjunct `d` is still owned by the powerset object: any function call on the owning powerset object may invalidate it. Moreover, `d` should **not** be deleted directly: its resources will be released when deleting the owning powerset.

10.81.2.7 `int ppl_Pointset_Powerset_C_Polyhedron_const_iterator_end (ppl_const_Pointset_Powerset_C_Polyhedron_t ps, ppl_Pointset_Powerset_C_Polyhedron_const_iterator_t psit) [related]`

Assigns to `psit` a const iterator "pointing" past the end of the sequence of disjuncts of `ps`.

10.81.2.8 `int ppl_Pointset_Powerset_C_Polyhedron_const_iterator_equal_test (ppl_const_Pointset_Powerset_C_Polyhedron_const_iterator_t x, ppl_const_Pointset_Powerset_C_Polyhedron_const_iterator_t y) [related]`

Returns a positive integer if the iterators corresponding to `x` and `y` are equal; returns 0 if they are different.

10.81.2.9 `int ppl_Pointset_Powerset_C_Polyhedron_const_iterator_increment (ppl_Pointset_Powerset_C_Polyhedron_const_iterator_t it) [related]`

Increments `it` so that it "points" to the next disjunct.

Decrements `it` so that it "points" to the previous disjunct.
- `int ppl_Pointset_Powerset_C_Polyhedron_iterator_equal_test` (`ppl_const_Pointset_Powerset_C_Polyhedron_iterator_t x`, `ppl_const_Pointset_Powerset_C_Polyhedron_iterator_t y`)
Returns a positive integer if the iterators corresponding to `x` and `y` are equal; returns 0 if they are different.

10.82.1 Detailed Description

Types and functions for iterating on the disjuncts of a `ppl_Pointset_Powerset_C_Polyhedron_tag`.

10.82.2 Friends And Related Function Documentation

10.82.2.1 `int ppl_delete_Pointset_Powerset_C_Polyhedron_iterator` (`ppl_const_Pointset_Powerset_C_Polyhedron_iterator_t it`) [**related**]

Invalidates the handle `it`: this makes sure the corresponding resources will eventually be released.

10.82.2.2 `int ppl_new_Pointset_Powerset_C_Polyhedron_iterator` (`ppl_Pointset_Powerset_C_Polyhedron_iterator_t *pit`) [**related**]

Builds a new ‘iterator’ and writes a handle to it at address `pit`.

10.82.2.3 `int ppl_new_Pointset_Powerset_C_Polyhedron_iterator_from_iterator (ppl_Pointset_Powerset_C_Polyhedron_iterator_t * pit, ppl_const_Pointset_Powerset_C_Polyhedron_iterator_t y)` [**related**]

Builds a copy of `y` and writes a handle to it at address `pit`.

10.82.2.4 `int ppl_Pointset_Powerset_C_Polyhedron_iterator_begin (ppl_Pointset_Powerset_C_Polyhedron_t ps, ppl_Pointset_Powerset_C_Polyhedron_iterator_t psit)` [**related**]

Assigns to `psit` an iterator "pointing" to the beginning of the sequence of disjuncts of `ps`.

10.82.2.5 `int ppl_Pointset_Powerset_C_Polyhedron_iterator_decrement (ppl_Pointset_Powerset_C_Polyhedron_iterator_t it)` [**related**]

Decrements `it` so that it "points" to the previous disjunct.

10.82.2.6 `int ppl_Pointset_Powerset_C_Polyhedron_iterator_dereference (ppl_const_Pointset_Powerset_C_Polyhedron_iterator_t it, ppl_const_Polyhedron_t * d)` [**related**]

Dereferences `it` writing a const handle to the resulting disjunct at address `d`.

Note

Even though `it` is an non-const iterator, dereferencing it results in a handle to a **const** disjunct. This is because mutable iterators are meant to allow for the modification of the sequence of disjuncts (e.g., by dropping elements), while preventing direct modifications of the disjuncts they point to.

Warning

On exit, the disjunct `d` is still owned by the powerset object: any function call on the owning powerset object may invalidate it. Moreover, `d` should **not** be deleted directly: its resources will be released when deleting the owning powerset.

10.82.2.7 `int ppl_Pointset_Powerset_C_Polyhedron_iterator_end (ppl_Pointset_Powerset_C_Polyhedron_t ps, ppl_Pointset_Powerset_C_Polyhedron_iterator_t psit)` [**related**]

Assigns to `psit` an iterator "pointing" past the end of the sequence of disjuncts of `ps`.

10.82.2.8 `int ppl_Pointset_Powerset_C_Polyhedron_iterator_equal_test`
 (`ppl_const_Pointset_Powerset_C_Polyhedron_iterator_t x`,
`ppl_const_Pointset_Powerset_C_Polyhedron_iterator_t y`) [**related**]

Returns a positive integer if the iterators corresponding to `x` and `y` are equal; returns 0 if they are different.

10.82.2.9 `int ppl_Pointset_Powerset_C_Polyhedron_iterator_increment`
 (`ppl_Pointset_Powerset_C_Polyhedron_iterator_t it`) [**related**]

Increments `it` so that it "points" to the next disjunct.

The documentation for this interface was generated from the following files:

- [ppl_c.h](#)

Ad Hoc Functions for Pointset_Powerset domains

- int [ppl_Pointset_Powerset_C_Polyhedron_omega_reduce](#) (ppl_const_Pointset_Powerset_C_Polyhedron_t ps)
Drops from the sequence of disjuncts in ps all the non-maximal elements so that ps is non-redundant.
- int [ppl_Pointset_Powerset_C_Polyhedron_size](#) (ppl_const_Pointset_Powerset_C_Polyhedron_t ps, size_t *sz)
Writes to sz the number of disjuncts in ps.
- int [ppl_Pointset_Powerset_C_Polyhedron_geometrically_covers_Pointset_Powerset_C_Polyhedron](#) (ppl_const_Pointset_Powerset_C_Polyhedron_t x, ppl_const_Pointset_Powerset_C_Polyhedron_t y)
Returns a positive integer if powerset x geometrically covers powerset y; returns 0 otherwise.
- int [ppl_Pointset_Powerset_C_Polyhedron_geometrically_equals_Pointset_Powerset_C_Polyhedron](#) (ppl_const_Pointset_Powerset_C_Polyhedron_t x, ppl_const_Pointset_Powerset_C_Polyhedron_t y)
Returns a positive integer if powerset x is geometrically equal to powerset y; returns 0 otherwise.

- int [ppl_Pointset_Powerset_C_Polyhedron_add_disjunct](#) (ppl_Pointset_Powerset_C_Polyhedron_t ps, ppl_const_Polyhedron_t d)
Adds to ps a copy of disjunct d.
- int [ppl_Pointset_Powerset_C_Polyhedron_drop_disjunct](#) (ppl_Pointset_Powerset_C_Polyhedron_t ps, ppl_const_Pointset_Powerset_C_Polyhedron_iterator_t cit, ppl_Pointset_Powerset_C_Polyhedron_iterator_t it)
Drops from ps the disjunct pointed to by cit, assigning to it an iterator to the disjunct following cit.
- int [ppl_Pointset_Powerset_C_Polyhedron_drop_disjuncts](#) (ppl_Pointset_Powerset_C_Polyhedron_t ps, ppl_const_Pointset_Powerset_C_Polyhedron_iterator_t first, ppl_const_Pointset_Powerset_C_Polyhedron_iterator_t last)
Drops from ps all the disjuncts from first to last (excluded).
- int [ppl_Pointset_Powerset_C_Polyhedron_pairwise_reduce](#) (ppl_Pointset_Powerset_C_Polyhedron_t ps)
Modifies ps by (recursively) merging together the pairs of disjuncts whose upper-bound is the same as their set-theoretical union.

10.83.1 Detailed Description

Types and functions for the Pointset_Powerset of C_Polyhedron objects. Types and functions for [ppl_Pointset_Powerset_C_Polyhedron_tag](#).

The powerset domains can be instantiated by taking as a base domain any fixed semantic geometric description (C and NNC polyhedra, BD and octagonal shapes, boxes and grids). An element of the powerset domain represents a disjunctive collection of base objects (its disjuncts), all having the same space dimension.

Besides the functions that are available in all semantic geometric descriptions (whose documentation is not repeated here), the powerset domain also provides several ad hoc functions. In particular, the iterator types allow for the examination and manipulation of the collection of disjuncts.

10.131.1 Detailed Description

Types and functions for [ppl_Pointset_Powerset_Octagonal_Shape_long_double_tag](#).

10.131.2 Friends And Related Function Documentation

- 10.131.2.1** `int ppl_delete_Pointset_Powerset_Octagonal_Shape_long_double
(ppl_const_Pointset_Powerset_Octagonal_Shape_long_double_t ph)` [**related**]
- 10.131.2.2** `int ppl_new_Pointset_Powerset_Octagonal_Shape_long_double_from_Congruence_
System (ppl_Pointset_Powerset_Octagonal_Shape_long_double_t * pph,
ppl_const_Congruence_System_t cs)` [**related**]
- 10.131.2.3** `int ppl_new_Pointset_Powerset_Octagonal_Shape_long_double_from_Constraint_
System (ppl_Pointset_Powerset_Octagonal_Shape_long_double_t * pph,
ppl_const_Constraint_System_t cs)` [**related**]
- 10.131.2.4** `int ppl_new_Pointset_Powerset_Octagonal_Shape_long_double_from_Octagonal_
Shape_long_double (ppl_Pointset_Powerset_Octagonal_Shape_long_double_t * pph,
ppl_const_Octagonal_Shape_long_double_t ph)` [**related**]
- 10.131.2.5** `int ppl_new_Pointset_Powerset_Octagonal_Shape_long_
double_from_Octagonal_Shape_long_double_with_complexity
(ppl_Pointset_Powerset_Octagonal_Shape_long_double_t * pph,
ppl_const_Octagonal_Shape_long_double_t ph, int complexity)` [**related**]
- 10.131.2.6** `int ppl_new_Pointset_Powerset_Octagonal_Shape_long_
double_from_Pointset_Powerset_Octagonal_Shape_long_double
(ppl_Pointset_Powerset_Octagonal_Shape_long_double_t * pph,
ppl_const_Pointset_Powerset_Octagonal_Shape_long_double_t ph)` [**related**]
- 10.131.2.7** `int ppl_new_Pointset_Powerset_Octagonal_Shape_long_double_from_
Pointset_Powerset_Octagonal_Shape_long_double_with_complexity
(ppl_Pointset_Powerset_Octagonal_Shape_long_double_t * pph,
ppl_const_Pointset_Powerset_Octagonal_Shape_long_double_t ph, int complexity)`
[**related**]

- 10.131.2.8** `int ppl_new_Pointset_Powerset_Octagonal_Shape_long_double_from_space_dimension (ppl_Pointset_Powerset_Octagonal_Shape_long_double_t * pph, ppl_dimension_type d, int empty)` [**related**]
- 10.131.2.9** `int ppl_Pointset_Powerset_Octagonal_Shape_long_double_add_congruence (ppl_Pointset_Powerset_Octagonal_Shape_long_double_t ph, ppl_const_Congruence_t c)` [**related**]
- 10.131.2.10** `int ppl_Pointset_Powerset_Octagonal_Shape_long_double_add_congruences (ppl_Pointset_Powerset_Octagonal_Shape_long_double_t ph, ppl_const_Congruence_System_t cs)` [**related**]
- 10.131.2.11** `int ppl_Pointset_Powerset_Octagonal_Shape_long_double_add_constraint (ppl_Pointset_Powerset_Octagonal_Shape_long_double_t ph, ppl_const_Constraint_t c)` [**related**]
- 10.131.2.12** `int ppl_Pointset_Powerset_Octagonal_Shape_long_double_add_constraints (ppl_Pointset_Powerset_Octagonal_Shape_long_double_t ph, ppl_const_Constraint_System_t cs)` [**related**]
- 10.131.2.13** `int ppl_Pointset_Powerset_Octagonal_Shape_long_double_add_disjunct (ppl_Pointset_Powerset_Octagonal_Shape_long_double_t ps, ppl_const_Octagonal_Shape_long_double_t d)` [**related**]
- 10.131.2.14** `int ppl_Pointset_Powerset_Octagonal_Shape_long_double_add_space_dimensions_and_embed (ppl_Pointset_Powerset_Octagonal_Shape_long_double_t ph, ppl_dimension_type d)` [**related**]
- 10.131.2.15** `int ppl_Pointset_Powerset_Octagonal_Shape_long_double_add_space_dimensions_and_project (ppl_Pointset_Powerset_Octagonal_Shape_long_double_t ph, ppl_dimension_type d)` [**related**]

Types and functions for `ppl_Pointset_Powerset_Rational_Box_tag`.

10.140.2 Friends And Related Function Documentation

10.140.2.1 `int ppl_delete_Pointset_Powerset_Rational_Box` (`ppl_const_Pointset_Powerset_Rational_Box_t` *ph*) [**related**]

10.140.2.2 `int ppl_new_Pointset_Powerset_Rational_Box_from_Congruence_System` (`ppl_Pointset_Powerset_Rational_Box_t` **pph*, `ppl_const_Congruence_System_t` *cs*) [**related**]

- 10.140.2.3 `int ppl_new_Pointset_Powerset_Rational_Box_from_Constraint_System`
 (`ppl_Pointset_Powerset_Rational_Box_t *pph`, `ppl_const_Constraint_System_t cs`)
 [related]
- 10.140.2.4 `int ppl_new_Pointset_Powerset_Rational_Box_from_Pointset_-`
`Powerset_Rational_Box` (`ppl_Pointset_Powerset_Rational_Box_t *pph`,
`ppl_const_Pointset_Powerset_Rational_Box_t ph`) [related]
- 10.140.2.5 `int ppl_new_Pointset_Powerset_Rational_Box_from_Pointset_Powerset_-`
`Rational_Box_with_complexity` (`ppl_Pointset_Powerset_Rational_Box_t *pph`,
`ppl_const_Pointset_Powerset_Rational_Box_t ph`, `int complexity`) [related]
- 10.140.2.6 `int ppl_new_Pointset_Powerset_Rational_Box_from_Rational_Box`
 (`ppl_Pointset_Powerset_Rational_Box_t *pph`, `ppl_const_Rational_Box_t ph`)
 [related]
- 10.140.2.7 `int ppl_new_Pointset_Powerset_Rational_Box_from_Rational_Box_with_complexity`
 (`ppl_Pointset_Powerset_Rational_Box_t *pph`, `ppl_const_Rational_Box_t ph`, `int`
`complexity`) [related]
- 10.140.2.8 `int ppl_new_Pointset_Powerset_Rational_Box_from_space_dimension`
 (`ppl_Pointset_Powerset_Rational_Box_t *pph`, `ppl_dimension_type d`, `int empty`)
 [related]
- 10.140.2.9 `int ppl_Pointset_Powerset_Rational_Box_add_congruence` (`ppl_-`
`Pointset_Powerset_Rational_Box_t ph`, `ppl_const_Congruence_t c`)
 [related]
- 10.140.2.10 `int ppl_Pointset_Powerset_Rational_Box_add_congruences` (`ppl_Pointset_-`
`Powerset_Rational_Box_t ph`, `ppl_const_Congruence_System_t cs`)
 [related]

- 10.140.2.11 `int ppl_Pointset_Powerset_Rational_Box_add_constraint (ppl_Pointset_Powerset_Rational_Box_t ph, ppl_const_Constraint_t c)` `[related]`
- 10.140.2.12 `int ppl_Pointset_Powerset_Rational_Box_add_constraints (ppl_Pointset_Powerset_Rational_Box_t ph, ppl_const_Constraint_System_t cs)` `[related]`
- 10.140.2.13 `int ppl_Pointset_Powerset_Rational_Box_add_disjunct (ppl_Pointset_Powerset_Rational_Box_t ps, ppl_const_Rational_Box_t d)` `[related]`
- 10.140.2.14 `int ppl_Pointset_Powerset_Rational_Box_add_space_dimensions_and_embed (ppl_Pointset_Powerset_Rational_Box_t ph, ppl_dimension_type d)` `[related]`
- 10.140.2.15 `int ppl_Pointset_Powerset_Rational_Box_add_space_dimensions_and_project (ppl_Pointset_Powerset_Rational_Box_t ph, ppl_dimension_type d)` `[related]`
- 10.140.2.16 `int ppl_Pointset_Powerset_Rational_Box_affine_dimension (ppl_Const_Pointset_Powerset_Rational_Box_t ph, ppl_dimension_type * m)` `[related]`
- 10.140.2.17 `int ppl_Pointset_Powerset_Rational_Box_affine_image (ppl_Pointset_Powerset_Rational_Box_t ph, ppl_dimension_type var, ppl_const_Linear_Expression_t le, ppl_const_Coefficient_t d)` `[related]`
- 10.140.2.18 `int ppl_Pointset_Powerset_Rational_Box_affine_preimage (ppl_Pointset_Powerset_Rational_Box_t ph, ppl_dimension_type var, ppl_const_Linear_Expression_t le, ppl_const_Coefficient_t d)` `[related]`

- 10.140.2.19 `int ppl_Pointset_Powerset_Rational_Box_bounded_affine_image`
 (`ppl_Pointset_Powerset_Rational_Box_t ph`, `ppl_dimension_type var`,
`ppl_const_Linear_Expression_t lb`, `ppl_const_Linear_Expression_t ub`,
`ppl_const_Coefficient_t d`) [`related`]
- 10.140.2.20 `int ppl_Pointset_Powerset_Rational_Box_bounded_affine_preimage`
 (`ppl_Pointset_Powerset_Rational_Box_t ph`, `ppl_dimension_type var`,
`ppl_const_Linear_Expression_t lb`, `ppl_const_Linear_Expression_t ub`,
`ppl_const_Coefficient_t d`) [`related`]
- 10.140.2.21 `int ppl_Pointset_Powerset_Rational_Box_bounds_from_above`
 (`ppl_const_Pointset_Powerset_Rational_Box_t ph`, `ppl_const_Linear_Expression_t`
`le`) [`related`]
- 10.140.2.22 `int ppl_Pointset_Powerset_Rational_Box_bounds_from_below`
 (`ppl_const_Pointset_Powerset_Rational_Box_t ph`, `ppl_const_Linear_Expression_t`
`le`) [`related`]
- 10.140.2.23 `int ppl_Pointset_Powerset_Rational_Box_concatenate_assign` (`ppl_Pointset_Powerset_Rational_Box_t x`, `ppl_const_Pointset_Powerset_Rational_Box_t y`)
 [`related`]
- 10.140.2.24 `int ppl_Pointset_Powerset_Rational_Box_constrains` (`ppl_Pointset_Powerset_Rational_Box_t ph`, `ppl_dimension_type var`)
 [`related`]
- 10.140.2.25 `int ppl_Pointset_Powerset_Rational_Box_contains_integer_point`
 (`ppl_const_Pointset_Powerset_Rational_Box_t ph`) [`related`]

Constructors and Assignment for C_Polyhedron

- int [ppl_new_C_Polyhedron_from_space_dimension](#) (ppl_Polyhedron_t *pph, [ppl_dimension_type](#) d, int empty)
Builds a C polyhedron of dimension d and writes an handle to it at address pph. If empty is different from zero, the newly created polyhedron will be empty; otherwise, it will be a universe polyhedron.
- int [ppl_new_C_Polyhedron_from_C_Polyhedron](#) (ppl_Polyhedron_t *pph, ppl_const_Polyhedron_t ph)
Builds a C polyhedron that is a copy of ph; writes a handle for the newly created polyhedron at address pph.
- int [ppl_new_C_Polyhedron_from_C_Polyhedron_with_complexity](#) (ppl_Polyhedron_t *pph, ppl_const_Polyhedron_t ph, int complexity)
Builds a C polyhedron that is a copy of ph; writes a handle for the newly created polyhedron at address pph.
- int [ppl_new_C_Polyhedron_from_Constraint_System](#) (ppl_Polyhedron_t *pph, ppl_const_Constraint_System_t cs)
Builds a new C polyhedron from the system of constraints cs and writes a handle for the newly created polyhedron at address pph.
- int [ppl_new_C_Polyhedron_recycle_Constraint_System](#) (ppl_Polyhedron_t *pph, ppl_Constraint_System_t cs)
Builds a new C polyhedron recycling the system of constraints cs and writes a handle for the newly created polyhedron at address pph.
- int [ppl_new_C_Polyhedron_from_Congruence_System](#) (ppl_Polyhedron_t *pph, ppl_const_Congruence_System_t cs)
Builds a new C polyhedron from the system of congruences cs and writes a handle for the newly created polyhedron at address pph.

- `int ppl_new_C_Polyhedron_recycle_Congruence_System` (`ppl_Polyhedron_t *pph`, `ppl_Congruence_System_t cs`)
Builds a new C polyhedron recycling the system of congruences `cs` and writes a handle for the newly created polyhedron at address `pph`.
- `int ppl_assign_C_Polyhedron_from_C_Polyhedron` (`ppl_Polyhedron_t dst`, `ppl_const_Polyhedron_t src`)
Assigns a copy of the C polyhedron `src` to the C polyhedron `dst`.

Constructors and Assignment for NNC_Polyhedron

- `int ppl_new_NNC_Polyhedron_from_space_dimension` (`ppl_Polyhedron_t *pph`, `ppl_dimension_type d`, `int empty`)
Builds an NNC polyhedron of dimension `d` and writes an handle to it at address `pph`. If `empty` is different from zero, the newly created polyhedron will be empty; otherwise, it will be a universe polyhedron.
- `int ppl_new_NNC_Polyhedron_from_NNC_Polyhedron` (`ppl_Polyhedron_t *pph`, `ppl_const_Polyhedron_t ph`)
Builds an NNC polyhedron that is a copy of `ph`; writes a handle for the newly created polyhedron at address `pph`.
- `int ppl_new_NNC_Polyhedron_from_NNC_Polyhedron_with_complexity` (`ppl_Polyhedron_t *pph`, `ppl_const_Polyhedron_t ph`, `int complexity`)
Builds an NNC polyhedron that is a copy of `ph`; writes a handle for the newly created polyhedron at address `pph`.
- `int ppl_new_NNC_Polyhedron_from_Constraint_System` (`ppl_Polyhedron_t *pph`, `ppl_const_Constraint_System_t cs`)
Builds a new NNC polyhedron from the system of constraints `cs` and writes a handle for the newly created polyhedron at address `pph`.
- `int ppl_new_NNC_Polyhedron_recycle_Constraint_System` (`ppl_Polyhedron_t *pph`, `ppl_Constraint_System_t cs`)
Builds a new NNC polyhedron recycling the system of constraints `cs` and writes a handle for the newly created polyhedron at address `pph`.
- `int ppl_new_NNC_Polyhedron_from_Congruence_System` (`ppl_Polyhedron_t *pph`, `ppl_const_Congruence_System_t cs`)
Builds a new NNC polyhedron from the system of congruences `cs` and writes a handle for the newly created polyhedron at address `pph`.
- `int ppl_new_NNC_Polyhedron_recycle_Congruence_System` (`ppl_Polyhedron_t *pph`, `ppl_Congruence_System_t cs`)
Builds a new NNC polyhedron recycling the system of congruences `cs` and writes a handle for the newly created polyhedron at address `pph`.
- `int ppl_assign_NNC_Polyhedron_from_NNC_Polyhedron` (`ppl_Polyhedron_t dst`, `ppl_const_Polyhedron_t src`)
Assigns a copy of the NNC polyhedron `src` to the NNC polyhedron `dst`.

Constructors Behaving as Conversion Operators

Besides the conversions listed here below, the library also provides conversion operators that build a semantic geometric description starting from **any** other semantic geometric description (e.g., `ppl_new_Grid_from_C_Polyhedron`, `ppl_new_C_Polyhedron_from_BD_Shape_mpq_class`, etc.). Clearly,

the conversion operators are only available if both the source and the target semantic geometric descriptions have been enabled when configuring the library. The conversions also taking as argument a complexity class sometimes provide non-trivial precision/efficiency trade-offs.

- `int ppl_new_C_Polyhedron_from_NNC_Polyhedron` (`ppl_Polyhedron_t *pph`, `ppl_const_Polyhedron_t ph`)
Builds a C polyhedron that is a copy of the topological closure of the NNC polyhedron `ph`; writes a handle for the newly created polyhedron at address `pph`.
- `int ppl_new_C_Polyhedron_from_NNC_Polyhedron_with_complexity` (`ppl_Polyhedron_t *pph`, `ppl_const_Polyhedron_t ph`, `int complexity`)
Builds a C polyhedron that approximates NNC_Polyhedron `ph`, using an algorithm whose complexity does not exceed `complexity`; writes a handle for the newly created polyhedron at address `pph`.
- `int ppl_new_NNC_Polyhedron_from_C_Polyhedron` (`ppl_Polyhedron_t *pph`, `ppl_const_Polyhedron_t ph`)
Builds an NNC polyhedron that is a copy of the C polyhedron `ph`; writes a handle for the newly created polyhedron at address `pph`.
- `int ppl_new_NNC_Polyhedron_from_C_Polyhedron_with_complexity` (`ppl_Polyhedron_t *pph`, `ppl_const_Polyhedron_t ph`, `int complexity`)
Builds an NNC polyhedron that approximates C_Polyhedron `ph`, using an algorithm whose complexity does not exceed `complexity`; writes a handle for the newly created polyhedron at address `pph`.

Destructor for (C or NNC) Polyhedra

- `int ppl_delete_Polyhedron` (`ppl_const_Polyhedron_t ph`)
Invalidates the handle `ph`: this makes sure the corresponding resources will eventually be released.

Functions that Do Not Modify the Polyhedron

- `int ppl_Polyhedron_space_dimension` (`ppl_const_Polyhedron_t ph`, `ppl_dimension_type *m`)
Writes to `m` the dimension of the vector space enclosing `ph`.
- `int ppl_Polyhedron_affine_dimension` (`ppl_const_Polyhedron_t ph`, `ppl_dimension_type *m`)
Writes to `m` the affine dimension of `ph` (not to be confused with the dimension of its enclosing vector space) or 0, if `ph` is empty.
- `int ppl_Polyhedron_relation_with_Constraint` (`ppl_const_Polyhedron_t ph`, `ppl_const_Constraint_t c`)
Checks the relation between the polyhedron `ph` and the constraint `c`.
- `int ppl_Polyhedron_relation_with_Generator` (`ppl_const_Polyhedron_t ph`, `ppl_const_Generator_t g`)
Checks the relation between the polyhedron `ph` and the generator `g`.
- `int ppl_Polyhedron_get_constraints` (`ppl_const_Polyhedron_t ph`, `ppl_const_System_t *pcs`)
Writes a const handle to the constraint system defining the polyhedron `ph` at address `pcs`.
- `int ppl_Polyhedron_get_congruences` (`ppl_const_Polyhedron_t ph`, `ppl_const_Congruence_System_t *pcs`)
Writes at address `pcs` a const handle to a system of congruences approximating the polyhedron `ph`.

- int [ppl_Polyhedron_get_minimized_constraints](#) (ppl_const_Polyhedron_t ph, ppl_const_Constraint_System_t *pcs)
Writes a const handle to the minimized constraint system defining the polyhedron *ph* at address *pcs*.
- int [ppl_Polyhedron_get_minimized_congruences](#) (ppl_const_Polyhedron_t ph, ppl_const_Congruence_System_t *pcs)
Writes at address *pcs* a const handle to a system of minimized congruences approximating the polyhedron *ph*.
- int [ppl_Polyhedron_is_empty](#) (ppl_const_Polyhedron_t ph)
Returns a positive integer if *ph* is empty; returns 0 if *ph* is not empty.
- int [ppl_Polyhedron_is_universe](#) (ppl_const_Polyhedron_t ph)
Returns a positive integer if *ph* is a universe polyhedron; returns 0 if it is not.
- int [ppl_Polyhedron_is_bounded](#) (ppl_const_Polyhedron_t ph)
Returns a positive integer if *ph* is bounded; returns 0 if *ph* is unbounded.
- int [ppl_Polyhedron_contains_integer_point](#) (ppl_const_Polyhedron_t ph)
Returns a positive integer if *ph* contains at least one integer point; returns 0 otherwise.
- int [ppl_Polyhedron_is_topologically_closed](#) (ppl_const_Polyhedron_t ph)
Returns a positive integer if *ph* is topologically closed; returns 0 if *ph* is not topologically closed.
- int [ppl_Polyhedron_is_discrete](#) (ppl_const_Polyhedron_t ph)
Returns a positive integer if *ph* is a discrete set; returns 0 if *ph* is not a discrete set.
- int [ppl_Polyhedron_constrains](#) (ppl_Polyhedron_t ph, ppl_dimension_type var)
Returns a positive integer if *ph* constrains *var*; returns 0 if *ph* does not constrain *var*.
- int [ppl_Polyhedron_bounds_from_above](#) (ppl_const_Polyhedron_t ph, ppl_const_Linear_Expression_t le)
Returns a positive integer if *le* is bounded from above in *ph*; returns 0 otherwise.
- int [ppl_Polyhedron_bounds_from_below](#) (ppl_const_Polyhedron_t ph, ppl_const_Linear_Expression_t le)
Returns a positive integer if *le* is bounded from below in *ph*; returns 0 otherwise.
- int [ppl_Polyhedron_maximize_with_point](#) (ppl_const_Polyhedron_t ph, ppl_const_Linear_Expression_t le, ppl_Coefficient_t sup_n, ppl_Coefficient_t sup_d, int *pmaximum, ppl_Generator_t point)
Returns a positive integer if *ph* is not empty and *le* is bounded from above in *ph*, in which case the supremum value and a point where *le* reaches it are computed.
- int [ppl_Polyhedron_maximize](#) (ppl_const_Polyhedron_t ph, ppl_const_Linear_Expression_t le, ppl_Coefficient_t sup_n, ppl_Coefficient_t sup_d, int *pmaximum)
The same as *ppl_Polyhedron_maximize_with_point*, but without the output argument for the location where the supremum value is reached.
- int [ppl_Polyhedron_minimize_with_point](#) (ppl_const_Polyhedron_t ph, ppl_const_Linear_Expression_t le, ppl_Coefficient_t inf_n, ppl_Coefficient_t inf_d, int *pminimum, ppl_Generator_t point)
Returns a positive integer if *ph* is not empty and *le* is bounded from below in *ph*, in which case the infimum value and a point where *le* reaches it are computed.

- `int ppl_Polyhedron_minimize_with_point` (`ppl_const_Polyhedron_t ph`, `ppl_const_Linear_Expression_t le`, `ppl_Coefficient_t inf_n`, `ppl_Coefficient_t inf_d`, `int *pminimum`)
The same as `ppl_Polyhedron_minimize_with_point`, but without the output argument for the location where the infimum value is reached.
- `int ppl_Polyhedron_contains_Polyhedron` (`ppl_const_Polyhedron_t x`, `ppl_const_Polyhedron_t y`)
Returns a positive integer if x contains or is equal to y ; returns 0 if it does not.
- `int ppl_Polyhedron_strictly_contains_Polyhedron` (`ppl_const_Polyhedron_t x`, `ppl_const_Polyhedron_t y`)
Returns a positive integer if x strictly contains y ; returns 0 if it does not.
- `int ppl_Polyhedron_is_disjoint_from_Polyhedron` (`ppl_const_Polyhedron_t x`, `ppl_const_Polyhedron_t y`)
Returns a positive integer if x and y are disjoint; returns 0 if they are not.
- `int ppl_Polyhedron_equals_Polyhedron` (`ppl_const_Polyhedron_t x`, `ppl_const_Polyhedron_t y`)
Returns a positive integer if x and y are the same polyhedron; returns 0 if they are different.
- `int ppl_Polyhedron_OK` (`ppl_const_Polyhedron_t ph`)
Returns a positive integer if ph is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if ph is broken. Useful for debugging purposes.
- `int ppl_Polyhedron_external_memory_in_bytes` (`ppl_const_Polyhedron_t ph`, `size_t *sz`)
Writes to sz a lower bound to the size in bytes of the memory managed by ph .
- `int ppl_Polyhedron_total_memory_in_bytes` (`ppl_const_Polyhedron_t ph`, `size_t *sz`)
Writes to sz a lower bound to the size in bytes of the memory managed by ph .

Space Dimension Preserving Functions that May Modify the Polyhedron

- `int ppl_Polyhedron_add_constraint` (`ppl_Polyhedron_t ph`, `ppl_const_Constraint_t c`)
Adds a copy of the constraint c to the system of constraints of ph .
- `int ppl_Polyhedron_add_congruence` (`ppl_Polyhedron_t ph`, `ppl_const_Congruence_t c`)
Adds a copy of the congruence c to polyhedron of ph .
- `int ppl_Polyhedron_add_constraints` (`ppl_Polyhedron_t ph`, `ppl_const_Constraint_System_t cs`)
Adds a copy of the system of constraints cs to the system of constraints of ph .
- `int ppl_Polyhedron_add_congruences` (`ppl_Polyhedron_t ph`, `ppl_const_Congruence_System_t cs`)
Adds a copy of the system of congruences cs to the polyhedron ph .
- `int ppl_Polyhedron_add_recycled_constraints` (`ppl_Polyhedron_t ph`, `ppl_Constraint_System_t cs`)
Adds the system of constraints cs to the system of constraints of ph .
- `int ppl_Polyhedron_add_recycled_congruences` (`ppl_Polyhedron_t ph`, `ppl_Congruence_System_t cs`)
Adds the system of congruences cs to the polyhedron ph .
- `int ppl_Polyhedron_refine_with_constraint` (`ppl_Polyhedron_t ph`, `ppl_const_Constraint_t c`)

Refines ph using constraint c .

- int [ppl_Polyhedron_refine_with_congruence](#) (ppl_Polyhedron_t ph , ppl_const_Congruence_t c)

Refines ph using congruence c .

- int [ppl_Polyhedron_refine_with_constraints](#) (ppl_Polyhedron_t ph , ppl_const_Constraint_System_t cs)

Refines ph using the constraints in cs .

- int [ppl_Polyhedron_refine_with_congruences](#) (ppl_Polyhedron_t ph , ppl_const_Congruence_System_t cs)

Refines ph using the congruences in cs .

- int [ppl_Polyhedron_intersection_assign](#) (ppl_Polyhedron_t x , ppl_const_Polyhedron_t y)

Intersects x with polyhedron y and assigns the result to x .

- int [ppl_Polyhedron_upper_bound_assign](#) (ppl_Polyhedron_t x , ppl_const_Polyhedron_t y)

Assigns to x an upper bound of x and y .

- int [ppl_Polyhedron_difference_assign](#) (ppl_Polyhedron_t x , ppl_const_Polyhedron_t y)

Same as `ppl_Polyhedron_poly_difference_assign(x, y)`.

- int [ppl_Polyhedron_simplify_using_context_assign](#) (ppl_Polyhedron_t x , ppl_const_Polyhedron_t y)

Assigns to x the meet-preserving simplification of x with respect to context y . Returns a positive integer if x and y have a nonempty intersection; returns 0 if they are disjoint.

- int [ppl_Polyhedron_time_elapse_assign](#) (ppl_Polyhedron_t x , ppl_const_Polyhedron_t y)

Assigns to x the time-elapse between the polyhedra x and y .

- int [ppl_Polyhedron_topological_closure_assign](#) (ppl_Polyhedron_t ph)

Assigns to ph its topological closure.

- int [ppl_Polyhedron_unconstrain_space_dimension](#) (ppl_Polyhedron_t ph , ppl_dimension_type var)

Modifies ph by unconstraining the space dimension var .

- int [ppl_Polyhedron_unconstrain_space_dimensions](#) (ppl_Polyhedron_t ph , ppl_dimension_type $ds[]$, size_t n)

Modifies ph by unconstraining the space dimensions that are specified in the first n positions of the array ds . The presence of duplicates in ds is a waste but an innocuous one.

- int [ppl_Polyhedron_affine_image](#) (ppl_Polyhedron_t ph , ppl_dimension_type var , ppl_const_Linear_Expression_t le , ppl_const_Coefficient_t d)

Transforms the polyhedron ph , assigning an affine expression to the specified variable.

- int [ppl_Polyhedron_affine_preimage](#) (ppl_Polyhedron_t ph , ppl_dimension_type var , ppl_const_Linear_Expression_t le , ppl_const_Coefficient_t d)

Transforms the polyhedron ph , substituting an affine expression to the specified variable.

- int [ppl_Polyhedron_bounded_affine_image](#) (ppl_Polyhedron_t ph , ppl_dimension_type var , ppl_const_Linear_Expression_t lb , ppl_const_Linear_Expression_t ub , ppl_const_Coefficient_t d)

Assigns to ph the image of ph with respect to the generalized affine transfer relation $\frac{lb}{d} \leq var' \leq \frac{ub}{d}$.

- `int ppl_Polyhedron_bounded_affine_preimage` (`ppl_Polyhedron_t` `ph`, `ppl_dimension_type` `var`, `ppl_const_Linear_Expression_t` `lb`, `ppl_const_Linear_Expression_t` `ub`, `ppl_const_Coefficient_t` `d`)
Assigns to `ph` the preimage of `ph` with respect to the generalized affine transfer relation $\frac{lb}{d} \leq \text{var}' \leq \frac{ub}{d}$.
- `int ppl_Polyhedron_generalized_affine_image` (`ppl_Polyhedron_t` `ph`, `ppl_dimension_type` `var`, `enum ppl_enum_Constraint_Type` `relysym`, `ppl_const_Linear_Expression_t` `le`, `ppl_const_Coefficient_t` `d`)
Assigns to `ph` the image of `ph` with respect to the generalized affine transfer relation $\text{var}' \bowtie \frac{le}{d}$, where $\bowtie$ is the relation symbol encoded by `relysym`.
- `int ppl_Polyhedron_generalized_affine_preimage` (`ppl_Polyhedron_t` `ph`, `ppl_dimension_type` `var`, `enum ppl_enum_Constraint_Type` `relysym`, `ppl_const_Linear_Expression_t` `le`, `ppl_const_Coefficient_t` `d`)
Assigns to `ph` the preimage of `ph` with respect to the generalized affine transfer relation $\text{var}' \bowtie \frac{le}{d}$, where $\bowtie$ is the relation symbol encoded by `relysym`.
- `int ppl_Polyhedron_generalized_affine_image_lhs_rhs` (`ppl_Polyhedron_t` `ph`, `ppl_const_Linear_Expression_t` `lhs`, `enum ppl_enum_Constraint_Type` `relysym`, `ppl_const_Linear_Expression_t` `rhs`)
Assigns to `ph` the image of `ph` with respect to the generalized affine transfer relation $\text{lhs}' \bowtie \text{rhs}$, where $\bowtie$ is the relation symbol encoded by `relysym`.
- `int ppl_Polyhedron_generalized_affine_preimage_lhs_rhs` (`ppl_Polyhedron_t` `ph`, `ppl_const_Linear_Expression_t` `lhs`, `enum ppl_enum_Constraint_Type` `relysym`, `ppl_const_Linear_Expression_t` `rhs`)
Assigns to `ph` the preimage of `ph` with respect to the generalized affine transfer relation $\text{lhs}' \bowtie \text{rhs}$, where $\bowtie$ is the relation symbol encoded by `relysym`.

Functions that May Modify the Dimension of the Vector Space

- `int ppl_Polyhedron_concatenate_assign` (`ppl_Polyhedron_t` `x`, `ppl_const_Polyhedron_t` `y`)
Seeing a polyhedron as a set of tuples (its points), assigns to `x` all the tuples that can be obtained by concatenating, in the order given, a tuple of `x` with a tuple of `y`.
- `int ppl_Polyhedron_add_space_dimensions_and_embed` (`ppl_Polyhedron_t` `ph`, `ppl_dimension_type` `d`)
Adds `d` new dimensions to the space enclosing the polyhedron `ph` and to `ph` itself.
- `int ppl_Polyhedron_add_space_dimensions_and_project` (`ppl_Polyhedron_t` `ph`, `ppl_dimension_type` `d`)
Adds `d` new dimensions to the space enclosing the polyhedron `ph`.
- `int ppl_Polyhedron_remove_space_dimensions` (`ppl_Polyhedron_t` `ph`, `ppl_dimension_type` `ds`[], `size_t` `n`)
Removes from the vector space enclosing `ph` the space dimensions that are specified in first `n` positions of the array `ds`. The presence of duplicates in `ds` is a waste but an innocuous one.
- `int ppl_Polyhedron_remove_higher_space_dimensions` (`ppl_Polyhedron_t` `ph`, `ppl_dimension_type` `d`)
Removes the higher dimensions from the vector space enclosing `ph` so that, upon successful return, the new space dimension is `d`.
- `int ppl_Polyhedron_map_space_dimensions` (`ppl_Polyhedron_t` `ph`, `ppl_dimension_type` `maps`[], `size_t` `n`)

Remaps the dimensions of the vector space according to a partial function. This function is specified by means of the `maps` array, which has `n` entries.

- `int ppl_Polyhedron_expand_space_dimension` (`ppl_Polyhedron_t` `ph`, `ppl_dimension_type` `d`, `ppl_dimension_type` `m`)
Expands the `d`-th dimension of the vector space enclosing `ph` to `m` new space dimensions.
- `int ppl_Polyhedron_fold_space_dimensions` (`ppl_Polyhedron_t` `ph`, `ppl_dimension_type` `ds`[], `size_t` `n`, `ppl_dimension_type` `d`)
Modifies `ph` by folding the space dimensions contained in the first `n` positions of the array `ds` into dimension `d`. The presence of duplicates in `ds` is a waste but an innocuous one.

Input/Output Functions

- `int ppl_io_print_Polyhedron` (`ppl_const_Polyhedron_t` `x`)
Prints `x` to `stdout`.
- `int ppl_io_fprint_Polyhedron` (`FILE *stream`, `ppl_const_Polyhedron_t` `x`)
Prints `x` to the given output `stream`.
- `int ppl_io_asprint_Polyhedron` (`char **strp`, `ppl_const_Polyhedron_t` `x`)
Prints `x` to a malloc-allocated string, a pointer to which is returned via `strp`.
- `int ppl_Polyhedron_ascii_dump` (`ppl_const_Polyhedron_t` `x`, `FILE *stream`)
Dumps an ascii representation of `x` on `stream`.
- `int ppl_Polyhedron_ascii_load` (`ppl_Polyhedron_t` `x`, `FILE *stream`)
Loads an ascii representation of `x` from `stream`.

Ad Hoc Functions for (C or NNC) Polyhedra

The functions listed here below, being specific of the polyhedron domains, do not have a correspondence in other semantic geometric descriptions.

- `int ppl_new_C_Polyhedron_from_Generator_System` (`ppl_Polyhedron_t` `*pph`, `ppl_const_Generator_System_t` `gs`)
Builds a new C polyhedron from the system of generators `gs` and writes a handle for the newly created polyhedron at address `pph`.
- `int ppl_new_C_Polyhedron_recycle_Generator_System` (`ppl_Polyhedron_t` `*pph`, `ppl_Generator_System_t` `gs`)
Builds a new C polyhedron recycling the system of generators `gs` and writes a handle for the newly created polyhedron at address `pph`.
- `int ppl_new_NNC_Polyhedron_from_Generator_System` (`ppl_Polyhedron_t` `*pph`, `ppl_const_Generator_System_t` `gs`)
Builds a new NNC polyhedron from the system of generators `gs` and writes a handle for the newly created polyhedron at address `pph`.
- `int ppl_new_NNC_Polyhedron_recycle_Generator_System` (`ppl_Polyhedron_t` `*pph`, `ppl_Generator_System_t` `gs`)
Builds a new NNC polyhedron recycling the system of generators `gs` and writes a handle for the newly created polyhedron at address `pph`.

- `int ppl_Polyhedron_get_generators` (`ppl_const_Polyhedron_t ph`, `ppl_const_Generator_System_t *pgs`)
Writes a const handle to the generator system defining the polyhedron `ph` at address `pgs`.
- `int ppl_Polyhedron_get_minimized_generators` (`ppl_const_Polyhedron_t ph`, `ppl_const_Generator_System_t *pgs`)
Writes a const handle to the minimized generator system defining the polyhedron `ph` at address `pgs`.
- `int ppl_Polyhedron_add_generator` (`ppl_Polyhedron_t ph`, `ppl_const_Generator_t g`)
Adds a copy of the generator `g` to the system of generators of `ph`.
- `int ppl_Polyhedron_add_generators` (`ppl_Polyhedron_t ph`, `ppl_const_Generator_System_t gs`)
Adds a copy of the system of generators `gs` to the system of generators of `ph`.
- `int ppl_Polyhedron_add_recycled_generators` (`ppl_Polyhedron_t ph`, `ppl_Generator_System_t gs`)
Adds the system of generators `gs` to the system of generators of `ph`.
- `int ppl_Polyhedron_poly_hull_assign` (`ppl_Polyhedron_t x`, `ppl_const_Polyhedron_t y`)
Assigns to `x` the poly-hull of `x` and `y`.
- `int ppl_Polyhedron_poly_difference_assign` (`ppl_Polyhedron_t x`, `ppl_const_Polyhedron_t y`)
Assigns to `x` the poly-difference of `x` and `y`.
- `int wrap_assign` (`ppl_Polyhedron_t ph`, `ppl_dimension_type ds[]`, `size_t n`, `ppl_enum_Bounded_Integer_Type_Width w`, `ppl_enum_Bounded_Integer_Type_Representation r`, `ppl_enum_Bounded_Integer_Type_Overflow o`, `const ppl_const_Constraint_System_t *pcs`, `unsigned complexity_threshold`, `int wrap_individually`)
Assigns to `ph` the polyhedron obtained from `ph` by "wrapping" the vector space defined by the first `n` space dimensions in `ds[]`.
- `int ppl_Polyhedron_BHRZ03_widening_assign_with_tokens` (`ppl_Polyhedron_t x`, `ppl_const_Polyhedron_t y`, `unsigned *tp`)
If the polyhedron `y` is contained in (or equal to) the polyhedron `x`, assigns to `x` the BHRZ03-widening of `x` and `y`. If `tp` is not the null pointer, the widening with tokens delay technique is applied with `*tp` available tokens.
- `int ppl_Polyhedron_H79_widening_assign_with_tokens` (`ppl_Polyhedron_t x`, `ppl_const_Polyhedron_t y`, `unsigned *tp`)
If the polyhedron `y` is contained in (or equal to) the polyhedron `x`, assigns to `x` the H79-widening of `x` and `y`. If `tp` is not the null pointer, the widening with tokens delay technique is applied with `*tp` available tokens.
- `int ppl_Polyhedron_BHRZ03_widening_assign` (`ppl_Polyhedron_t x`, `ppl_const_Polyhedron_t y`)
If the polyhedron `y` is contained in (or equal to) the polyhedron `x`, assigns to `x` the BHRZ03-widening of `x` and `y`.
- `int ppl_Polyhedron_H79_widening_assign` (`ppl_Polyhedron_t x`, `ppl_const_Polyhedron_t y`)
If the polyhedron `y` is contained in (or equal to) the polyhedron `x`, assigns to `x` the H79-widening of `x` and `y`.
- `int ppl_Polyhedron_limited_BHRZ03_extrapolation_assign_with_tokens` (`ppl_Polyhedron_t x`, `ppl_const_Polyhedron_t y`, `ppl_const_Constraint_System_t cs`, `unsigned *tp`)
If the polyhedron `y` is contained in (or equal to) the polyhedron `x`, assigns to `x` the BHRZ03-widening of `x` and `y` intersected with the constraints in `cs` that are satisfied by all the points of `x`. If `tp` is not the null pointer, the widening with tokens delay technique is applied with `*tp` available tokens.

- `int ppl_Polyhedron_limited_H79_extrapolation_assign_with_tokens` (`ppl_Polyhedron_t x`, `ppl_const_Polyhedron_t y`, `ppl_const_Constraint_System_t cs`, `unsigned *tp`)
If the polyhedron y is contained in (or equal to) the polyhedron x , assigns to x the H79-widening of x and y intersected with the constraints in cs that are satisfied by all the points of x . If tp is not the null pointer, the widening with tokens delay technique is applied with $*tp$ available tokens.
- `int ppl_Polyhedron_limited_BHRZ03_extrapolation_assign` (`ppl_Polyhedron_t x`, `ppl_const_Polyhedron_t y`, `ppl_const_Constraint_System_t cs`)
If the polyhedron y is contained in (or equal to) the polyhedron x , assigns to x the BHRZ03-widening of x and y intersected with the constraints in cs that are satisfied by all the points of x .
- `int ppl_Polyhedron_limited_H79_extrapolation_assign` (`ppl_Polyhedron_t x`, `ppl_const_Polyhedron_t y`, `ppl_const_Constraint_System_t cs`)
If the polyhedron y is contained in (or equal to) the polyhedron x , assigns to x the H79-widening of x and y intersected with the constraints in cs that are satisfied by all the points of x .
- `int ppl_Polyhedron_bounded_BHRZ03_extrapolation_assign_with_tokens` (`ppl_Polyhedron_t x`, `ppl_const_Polyhedron_t y`, `ppl_const_Constraint_System_t cs`, `unsigned *tp`)
If the polyhedron y is contained in (or equal to) the polyhedron x , assigns to x the BHRZ03-widening of x and y intersected with the constraints in cs that are satisfied by all the points of x , further intersected with all the constraints of the form $\pm v \leq r$ and $\pm v < r$, with $r \in \mathbb{Q}$, that are satisfied by all the points of x . If tp is not the null pointer, the widening with tokens delay technique is applied with $*tp$ available tokens.
- `int ppl_Polyhedron_bounded_H79_extrapolation_assign_with_tokens` (`ppl_Polyhedron_t x`, `ppl_const_Polyhedron_t y`, `ppl_const_Constraint_System_t cs`, `unsigned *tp`)
If the polyhedron y is contained in (or equal to) the polyhedron x , assigns to x the H79-widening of x and y intersected with the constraints in cs that are satisfied by all the points of x , further intersected with all the constraints of the form $\pm v \leq r$ and $\pm v < r$, with $r \in \mathbb{Q}$, that are satisfied by all the points of x . If tp is not the null pointer, the widening with tokens delay technique is applied with $*tp$ available tokens.
- `int ppl_Polyhedron_bounded_BHRZ03_extrapolation_assign` (`ppl_Polyhedron_t x`, `ppl_const_Polyhedron_t y`, `ppl_const_Constraint_System_t cs`)
If the polyhedron y is contained in (or equal to) the polyhedron x , assigns to x the BHRZ03-widening of x and y intersected with the constraints in cs that are satisfied by all the points of x , further intersected with all the constraints of the form $\pm v \leq r$ and $\pm v < r$, with $r \in \mathbb{Q}$, that are satisfied by all the points of x .
- `int ppl_Polyhedron_bounded_H79_extrapolation_assign` (`ppl_Polyhedron_t x`, `ppl_const_Polyhedron_t y`, `ppl_const_Constraint_System_t cs`)
If the polyhedron y is contained in (or equal to) the polyhedron x , assigns to x the H79-widening of x and y intersected with the constraints in cs that are satisfied by all the points of x , further intersected with all the constraints of the form $\pm v \leq r$ and $\pm v < r$, with $r \in \mathbb{Q}$, that are satisfied by all the points of x .

10.156.1 Detailed Description

Types and functions for the domains of C and NNC convex polyhedra. Types and functions for [ppl_Polyhedron_tag](#).

The types and functions for convex polyhedra provide a single interface for accessing both topologically closed (C) and not necessarily closed (NNC) convex polyhedra. The distinction between C and NNC

polyhedra need only be explicitly stated when *creating* or *assigning* a polyhedron object, by means of one of the functions `ppl_new_*` and `ppl_assign_*`.

Having a single datatype does not mean that C and NNC polyhedra can be freely interchanged: as specified in the main manual, most library functions require their arguments to be topologically and/or space-dimension compatible.

10.156.2 Friends And Related Function Documentation

10.156.2.1 `int ppl_all_affine_ranking_functions_MS_C_Polyhedron (ppl_const_Polyhedron_t pset, ppl_Polyhedron_t ph)` [**related**]

10.156.2.2 `int ppl_all_affine_ranking_functions_MS_C_Polyhedron_2 (ppl_const_Polyhedron_t pset_before, ppl_const_Polyhedron_t pset_after, ppl_Polyhedron_t ph)` [**related**]

10.156.2.3 `int ppl_all_affine_ranking_functions_MS_NNC_Polyhedron (ppl_const_Polyhedron_t pset, ppl_Polyhedron_t ph)` [**related**]

10.156.2.4 `int ppl_all_affine_ranking_functions_MS_NNC_Polyhedron_2 (ppl_const_Polyhedron_t pset_before, ppl_const_Polyhedron_t pset_after, ppl_Polyhedron_t ph)` [**related**]

10.156.2.5 `int ppl_all_affine_ranking_functions_PR_C_Polyhedron (ppl_const_Polyhedron_t pset, ppl_Polyhedron_t ph)` [**related**]

10.156.2.6 `int ppl_all_affine_ranking_functions_PR_C_Polyhedron_2 (ppl_const_Polyhedron_t pset_before, ppl_const_Polyhedron_t pset_after, ppl_Polyhedron_t ph)` [**related**]

10.156.2.7 `int ppl_all_affine_ranking_functions_PR_NNC_Polyhedron (ppl_const_Polyhedron_t pset, ppl_Polyhedron_t ph)` [**related**]

10.156.2.8 `int ppl_all_affine_ranking_functions_PR_NNC_Polyhedron_2 (ppl_const_Polyhedron_t pset_before, ppl_const_Polyhedron_t pset_after, ppl_Polyhedron_t ph)` **[related]**

10.156.2.9 `int ppl_assign_C_Polyhedron_from_C_Polyhedron (ppl_Polyhedron_t dst, ppl_const_Polyhedron_t src)` **[related]**

Assigns a copy of the C polyhedron `src` to the C polyhedron `dst`.

10.156.2.10 `int ppl_assign_NNC_Polyhedron_from_NNC_Polyhedron (ppl_Polyhedron_t dst, ppl_const_Polyhedron_t src)` **[related]**

Assigns a copy of the NNC polyhedron `src` to the NNC polyhedron `dst`.

10.156.2.11 `int ppl_delete_Polyhedron (ppl_const_Polyhedron_t ph)` **[related]**

Invalidates the handle `ph`: this makes sure the corresponding resources will eventually be released.

10.156.2.12 `int ppl_io_asprint_Polyhedron (char ** strp, ppl_const_Polyhedron_t x)` **[related]**

Prints `x` to a malloc-allocated string, a pointer to which is returned via `strp`.

10.156.2.13 `int ppl_io_fprint_Polyhedron (FILE * stream, ppl_const_Polyhedron_t x)` **[related]**

Prints `x` to the given output `stream`.

10.156.2.14 `int ppl_io_print_Polyhedron (ppl_const_Polyhedron_t x)` **[related]**

Prints `x` to `stdout`.

10.156.2.15 `int ppl_new_C_Polyhedron_from_BD_Shape_double (ppl_Polyhedron_t * pph, ppl_const_BD_Shape_double_t ph)` **[related]**

- 10.156.2.16 `int ppl_new_C_Polyhedron_from_BD_Shape_double_with_complexity`
(`ppl_Polyhedron_t * pph`, `ppl_const_BD_Shape_double_t ph`, `int complexity`)
[related]
- 10.156.2.17 `int ppl_new_C_Polyhedron_from_BD_Shape_float` (`ppl_Polyhedron_t * pph`,
`ppl_const_BD_Shape_float_t ph`) [related]
- 10.156.2.18 `int ppl_new_C_Polyhedron_from_BD_Shape_float_with_complexity`
(`ppl_Polyhedron_t * pph`, `ppl_const_BD_Shape_float_t ph`, `int complexity`)
[related]
- 10.156.2.19 `int ppl_new_C_Polyhedron_from_BD_Shape_int16_t` (`ppl_Polyhedron_t * pph`,
`ppl_const_BD_Shape_int16_t_t ph`) [related]
- 10.156.2.20 `int ppl_new_C_Polyhedron_from_BD_Shape_int16_t_with_complexity`
(`ppl_Polyhedron_t * pph`, `ppl_const_BD_Shape_int16_t_t ph`, `int complexity`)
[related]
- 10.156.2.21 `int ppl_new_C_Polyhedron_from_BD_Shape_int32_t` (`ppl_Polyhedron_t * pph`,
`ppl_const_BD_Shape_int32_t_t ph`) [related]
- 10.156.2.22 `int ppl_new_C_Polyhedron_from_BD_Shape_int32_t_with_complexity`
(`ppl_Polyhedron_t * pph`, `ppl_const_BD_Shape_int32_t_t ph`, `int complexity`)
[related]
- 10.156.2.23 `int ppl_new_C_Polyhedron_from_BD_Shape_int64_t` (`ppl_Polyhedron_t * pph`,
`ppl_const_BD_Shape_int64_t_t ph`) [related]

- 10.156.2.24 `int ppl_new_C_Polyhedron_from_BD_Shape_int64_t_with_complexity`
(`ppl_Polyhedron_t * pph`, `ppl_const_BD_Shape_int64_t_t ph`, `int complexity`)
[related]
- 10.156.2.25 `int ppl_new_C_Polyhedron_from_BD_Shape_int8_t` (`ppl_Polyhedron_t * pph`,
`ppl_const_BD_Shape_int8_t_t ph`) [related]
- 10.156.2.26 `int ppl_new_C_Polyhedron_from_BD_Shape_int8_t_with_complexity`
(`ppl_Polyhedron_t * pph`, `ppl_const_BD_Shape_int8_t_t ph`, `int complexity`)
[related]
- 10.156.2.27 `int ppl_new_C_Polyhedron_from_BD_Shape_long_double` (`ppl_Polyhedron_t * pph`,
`ppl_const_BD_Shape_long_double_t_t ph`) [related]
- 10.156.2.28 `int ppl_new_C_Polyhedron_from_BD_Shape_long_double_with_complexity`
(`ppl_Polyhedron_t * pph`, `ppl_const_BD_Shape_long_double_t_t ph`, `int complexity`)
[related]
- 10.156.2.29 `int ppl_new_C_Polyhedron_from_BD_Shape_mpq_class` (`ppl_Polyhedron_t * pph`,
`ppl_const_BD_Shape_mpq_class_t_t ph`) [related]
- 10.156.2.30 `int ppl_new_C_Polyhedron_from_BD_Shape_mpq_class_with_complexity`
(`ppl_Polyhedron_t * pph`, `ppl_const_BD_Shape_mpq_class_t_t ph`, `int complexity`)
[related]
- 10.156.2.31 `int ppl_new_C_Polyhedron_from_BD_Shape_mpz_class` (`ppl_Polyhedron_t * pph`,
`ppl_const_BD_Shape_mpz_class_t_t ph`) [related]

10.156.2.32 `int ppl_new_C_Polyhedron_from_BD_Shape_mpz_class_with_complexity`
`(ppl_Polyhedron_t * pph, ppl_const_BD_Shape_mpz_class_t ph, int complexity)`
`[related]`

10.156.2.33 `int ppl_new_C_Polyhedron_from_C_Polyhedron` (`ppl_Polyhedron_t * pph,`
`ppl_const_Polyhedron_t ph`) `[related]`

Builds a C polyhedron that is a copy of *ph*; writes a handle for the newly created polyhedron at address *pph*.

10.156.2.34 `int ppl_new_C_Polyhedron_from_C_Polyhedron_with_complexity` (`ppl_Polyhedron_t`
`* pph, ppl_const_Polyhedron_t ph, int complexity`) `[related]`

Builds a C polyhedron that is a copy of *ph*; writes a handle for the newly created polyhedron at address *pph*.

Note

The complexity argument is ignored.

10.156.2.35 `int ppl_new_C_Polyhedron_from_Congruence_System` (`ppl_Polyhedron_t * pph,`
`ppl_const_Congruence_System_t cs`) `[related]`

Builds a new C polyhedron from the system of congruences *cs* and writes a handle for the newly created polyhedron at address *pph*.

The new polyhedron will inherit the space dimension of *cs*.

10.156.2.36 `int ppl_new_C_Polyhedron_from_Constraint_System` (`ppl_Polyhedron_t * pph,`
`ppl_const_Constraint_System_t cs`) `[related]`

Builds a new C polyhedron from the system of constraints *cs* and writes a handle for the newly created polyhedron at address *pph*.

The new polyhedron will inherit the space dimension of *cs*.

10.156.2.37 `int ppl_new_C_Polyhedron_from_Double_Box` (`ppl_Polyhedron_t * pph,`
`ppl_const_Double_Box_t ph`) `[related]`

10.156.2.38 `int ppl_new_C_Polyhedron_from_Double_Box_with_complexity (ppl_Polyhedron_t * pph, ppl_const_Double_Box_t ph, int complexity)` [**related**]

10.156.2.39 `int ppl_new_C_Polyhedron_from_Float_Box (ppl_Polyhedron_t * pph, ppl_const_Float_Box_t ph)` [**related**]

10.156.2.40 `int ppl_new_C_Polyhedron_from_Float_Box_with_complexity (ppl_Polyhedron_t * pph, ppl_const_Float_Box_t ph, int complexity)` [**related**]

10.156.2.41 `int ppl_new_C_Polyhedron_from_Generator_System (ppl_Polyhedron_t * pph, ppl_const_Generator_System_t gs)` [**related**]

Builds a new C polyhedron from the system of generators *gs* and writes a handle for the newly created polyhedron at address *pph*.

The new polyhedron will inherit the space dimension of *gs*.

10.156.2.42 `int ppl_new_C_Polyhedron_from_Grid (ppl_Polyhedron_t * pph, ppl_const_Grid_t ph)` [**related**]

10.156.2.43 `int ppl_new_C_Polyhedron_from_Grid_with_complexity (ppl_Polyhedron_t * pph, ppl_const_Grid_t ph, int complexity)` [**related**]

10.156.2.44 `int ppl_new_C_Polyhedron_from_Int16_Box (ppl_Polyhedron_t * pph, ppl_const_Int16_Box_t ph)` [**related**]

10.156.2.45 `int ppl_new_C_Polyhedron_from_Int16_Box_with_complexity (ppl_Polyhedron_t * pph, ppl_const_Int16_Box_t ph, int complexity)` [**related**]

10.156.2.46 `int ppl_new_C_Polyhedron_from_Int32_Box (ppl_Polyhedron_t * pph, ppl_const_Int32_Box_t ph)` [**related**]

10.156.2.47 `int ppl_new_C_Polyhedron_from_Int32_Box_with_complexity (ppl_Polyhedron_t * pph, ppl_const_Int32_Box_t ph, int complexity)` [**related**]

10.156.2.48 `int ppl_new_C_Polyhedron_from_Int64_Box (ppl_Polyhedron_t * pph, ppl_const_Int64_Box_t ph)` [**related**]

10.156.2.49 `int ppl_new_C_Polyhedron_from_Int64_Box_with_complexity (ppl_Polyhedron_t * pph, ppl_const_Int64_Box_t ph, int complexity)` [**related**]

10.156.2.50 `int ppl_new_C_Polyhedron_from_Int8_Box (ppl_Polyhedron_t * pph, ppl_const_Int8_Box_t ph)` [**related**]

10.156.2.51 `int ppl_new_C_Polyhedron_from_Int8_Box_with_complexity (ppl_Polyhedron_t * pph, ppl_const_Int8_Box_t ph, int complexity)` [**related**]

10.156.2.52 `int ppl_new_C_Polyhedron_from_Long_Double_Box (ppl_Polyhedron_t * pph, ppl_const_Long_Double_Box_t ph)` [**related**]

10.156.2.53 `int ppl_new_C_Polyhedron_from_Long_Double_Box_with_complexity (ppl_Polyhedron_t * pph, ppl_const_Long_Double_Box_t ph, int complexity)` [**related**]

10.156.2.54 `int ppl_new_C_Polyhedron_from_NNC_Polyhedron (ppl_Polyhedron_t * pph, ppl_const_Polyhedron_t ph)` [**related**]

Builds a C polyhedron that is a copy of the topological closure of the NNC polyhedron *ph*; writes a handle for the newly created polyhedron at address *pph*.

10.156.2.55 `int ppl_new_C_Polyhedron_from_NNC_Polyhedron_with_complexity (ppl_Polyhedron_t * pph, ppl_const_Polyhedron_t ph, int complexity)` [**related**]

Builds a C polyhedron that approximates NNC_Polyhedron *ph*, using an algorithm whose complexity does not exceed *complexity*; writes a handle for the newly created polyhedron at address *pph*.

Note

The *complexity* argument, which can take values `PPL_COMPLEXITY_CLASS_POLYNOMIAL`, `PPL_COMPLEXITY_CLASS_SIMPLEX` and `PPL_COMPLEXITY_CLASS_ANY`, is ignored since the exact constructor has polynomial complexity.

10.156.2.56 `int ppl_new_C_Polyhedron_from_Octagonal_Shape_double (ppl_Polyhedron_t * pph, ppl_const_Octagonal_Shape_double_t ph)` [**related**]

10.156.2.57 `int ppl_new_C_Polyhedron_from_Octagonal_Shape_double_with_complexity (ppl_Polyhedron_t * pph, ppl_const_Octagonal_Shape_double_t ph, int complexity)` [**related**]

10.156.2.58 `int ppl_new_C_Polyhedron_from_Octagonal_Shape_float (ppl_Polyhedron_t * pph, ppl_const_Octagonal_Shape_float_t ph)` [**related**]

10.156.2.59 `int ppl_new_C_Polyhedron_from_Octagonal_Shape_float_with_complexity (ppl_Polyhedron_t * pph, ppl_const_Octagonal_Shape_float_t ph, int complexity)` [**related**]

10.156.2.60 `int ppl_new_C_Polyhedron_from_Octagonal_Shape_int16_t (ppl_Polyhedron_t * pph, ppl_const_Octagonal_Shape_int16_t_t ph)` [**related**]

10.156.2.61 `int ppl_new_C_Polyhedron_from_Octagonal_Shape_int16_t_with_complexity (ppl_Polyhedron_t * pph, ppl_const_Octagonal_Shape_int16_t_t ph, int complexity)` [**related**]

10.156.2.62 `int ppl_new_C_Polyhedron_from_Octagonal_Shape_int32_t (ppl_Polyhedron_t * pph, ppl_const_Octagonal_Shape_int32_t_t ph)` [**related**]

- 10.156.2.63 `int ppl_new_C_Polyhedron_from_Octagonal_Shape_int32_t_with_complexity`
(`ppl_Polyhedron_t * pph`, `ppl_const_Octagonal_Shape_int32_t_t ph`, `int complexity`)
[related]
- 10.156.2.64 `int ppl_new_C_Polyhedron_from_Octagonal_Shape_int64_t` (`ppl_Polyhedron_t *`
`pph`, `ppl_const_Octagonal_Shape_int64_t_t ph`) [related]
- 10.156.2.65 `int ppl_new_C_Polyhedron_from_Octagonal_Shape_int64_t_with_complexity`
(`ppl_Polyhedron_t * pph`, `ppl_const_Octagonal_Shape_int64_t_t ph`, `int complexity`)
[related]
- 10.156.2.66 `int ppl_new_C_Polyhedron_from_Octagonal_Shape_int8_t` (`ppl_Polyhedron_t * pph`,

(`ppl_Polyhedron_t * pph`, `ppl_const_Octagonal_Shape_int8_t_t ph`, `int complexity`)
[related]
- 10.156.2.68 `int ppl_new_C_Polyhedron_from_Octagonal_Shape_long_double` (`ppl_Polyhedron_t *`
`* pph`, `ppl_const_Octagonal_Shape_long_double_t_t ph`) [related]
- 10.156.2.69 `int ppl_new_C_Polyhedron_from_Octagonal_Shape_long_double_with_complexity`
(`ppl_Polyhedron_t * pph`, `ppl_const_Octagonal_Shape_long_double_t_t ph`, `int`
`complexity`) [related]
- 10.156.2.70 `int ppl_new_C_Polyhedron_from_Octagonal_Shape_mpq_class` (`ppl_Polyhedron_t *`
`pph`, `ppl_const_Octagonal_Shape_mpq_class_t_t ph`) [related]

- 10.156.2.71** `int ppl_new_C_Polyhedron_from_Octagonal_Shape_mpq_class_with_complexity (ppl_Polyhedron_t * pph, ppl_const_Octagonal_Shape_mpq_class_t ph, int complexity)` [**related**]
- 10.156.2.72** `int ppl_new_C_Polyhedron_from_Octagonal_Shape_mpz_class (ppl_Polyhedron_t * pph, ppl_const_Octagonal_Shape_mpz_class_t ph)` [**related**]
- 10.156.2.73** `int ppl_new_C_Polyhedron_from_Octagonal_Shape_mpz_class_with_complexity (ppl_Polyhedron_t * pph, ppl_const_Octagonal_Shape_mpz_class_t ph, int complexity)` [**related**]
- 10.156.2.74** `int ppl_new_C_Polyhedron_from_Rational_Box (ppl_Polyhedron_t * pph, ppl_const_Rational_Box_t ph)` [**related**]
- 10.156.2.75** `int ppl_new_C_Polyhedron_from_Rational_Box_with_complexity (ppl_Polyhedron_t * pph, ppl_const_Rational_Box_t ph, int complexity)` [**related**]
- 10.156.2.76** `int ppl_new_C_Polyhedron_from_space_dimension (ppl_Polyhedron_t * pph, ppl_dimension_type d, int empty)` [**related**]
- Builds a C polyhedron of dimension *d* and writes an handle to it at address *pph*. If *empty* is different from zero, the newly created polyhedron will be empty; otherwise, it will be a universe polyhedron.
- 10.156.2.77** `int ppl_new_C_Polyhedron_from_Uint16_Box (ppl_Polyhedron_t * pph, ppl_const_Uint16_Box_t ph)` [**related**]
- 10.156.2.78** `int ppl_new_C_Polyhedron_from_Uint16_Box_with_complexity (ppl_Polyhedron_t * pph, ppl_const_Uint16_Box_t ph, int complexity)` [**related**]
- 10.156.2.79** `int ppl_new_C_Polyhedron_from_Uint32_Box (ppl_Polyhedron_t * pph, ppl_const_Uint32_Box_t ph)` [**related**]

- 10.156.2.80 `int ppl_new_C_Polyhedron_from_Uint32_Box_with_complexity (ppl_Polyhedron_t * pph, ppl_const_Uint32_Box_t ph, int complexity) [related]`

- 10.156.2.81 `int ppl_new_C_Polyhedron_from_Uint64_Box (ppl_Polyhedron_t * pph, ppl_const_Uint64_Box_t ph) [related]`

- 10.156.2.82 `int ppl_new_C_Polyhedron_from_Uint64_Box_with_complexity (ppl_Polyhedron_t * pph, ppl_const_Uint64_Box_t ph, int complexity) [related]`

- 10.156.2.83 `int ppl_new_C_Polyhedron_from_Uint8_Box (ppl_Polyhedron_t * pph, ppl_const_Uint8_Box_t ph) [related]`

- 10.156.2.84 `int ppl_new_C_Polyhedron_from_Uint8_Box_with_complexity (ppl_Polyhedron_t * pph, ppl_const_Uint8_Box_t ph, int complexity) [related]`

- 10.156.2.85 `int ppl_new_C_Polyhedron_from_Z_Box (ppl_Polyhedron_t * pph, ppl_const_Z_Box_t ph) [related]`

- 10.156.2.86 `int ppl_new_C_Polyhedron_from_Z_Box_with_complexity (ppl_Polyhedron_t * pph, ppl_const_Z_Box_t ph, int complexity) [related]`

- 10.156.2.87 `int ppl_new_C_Polyhedron_recycle_Congruence_System (ppl_Polyhedron_t * pph, ppl_Congruence_System_t cs) [related]`

Builds a new C polyhedron recycling the system of congruences `cs` and writes a handle for the newly created polyhedron at address `pph`.

The new polyhedron will inherit the space dimension of `cs`.

Warning

This function modifies the congruence system referenced by `cs`: upon return, no assumption can be made on its value.

10.156.2.88 `int ppl_new_C_Polyhedron_recycle_Constraint_System (ppl_Polyhedron_t * pph,
ppl_Constraint_System_t cs)` [**related**]

Builds a new C polyhedron recycling the system of constraints *cs* and writes a handle for the newly created polyhedron at address *pph*.

The new polyhedron will inherit the space dimension of *cs*.

Warning

This function modifies the constraint system referenced by *cs*: upon return, no assumption can be made on its value.

10.156.2.89 `int ppl_new_C_Polyhedron_recycle_Generator_System (ppl_Polyhedron_t * pph,
ppl_Generator_System_t gs)` [**related**]

Builds a new C polyhedron recycling the system of generators *gs* and writes a handle for the newly created polyhedron at address *pph*.

The new polyhedron will inherit the space dimension of *gs*.

Warning

This function modifies the generator system referenced by *gs*: upon return, no assumption can be made on its value.

`pph, ppl_const_Z_Box_t ph, int complexity`) [**related**]

10.156.2.162 `int ppl_new_NNC_Polyhedron_recycle_Congruence_System` (`ppl_Polyhedron_t *`
`pph, ppl_Congruence_System_t cs`) [**related**]

Builds a new NNC polyhedron recycling the system of congruences `cs` and writes a handle for the newly created polyhedron at address `pph`.

The new polyhedron will inherit the space dimension of `cs`.

Warning

This function modifies the congruence system referenced by `cs`: upon return, no assumption can be made on its value.

10.156.2.163 `int ppl_new_NNC_Polyhedron_recycle_Constraint_System` (`ppl_Polyhedron_t *`
`pph, ppl_Constraint_System_t cs`) [**related**]

Builds a new NNC polyhedron recycling the system of constraints `cs` and writes a handle for the newly created polyhedron at address `pph`.

The new polyhedron will inherit the space dimension of `cs`.

Warning

This function modifies the constraint system referenced by `cs`: upon return, no assumption can be made on its value.

10.156.2.164 `int ppl_new_NNC_Polyhedron_recycle_Generator_System` (`ppl_Polyhedron_t * pph,`
`ppl_Generator_System_t gs`) [**related**]

Builds a new NNC polyhedron recycling the system of generators `gs` and writes a handle for the newly created polyhedron at address `pph`.

The new polyhedron will inherit the space dimension of `gs`.

Warning

This function modifies the generator system referenced by `gs`: upon return, no assumption can be made on its value.

10.156.2.173 `int ppl_Polyhedron_add_congruence` (`ppl_Polyhedron_t ph`,
`ppl_const_Congruence_t c`) [**related**]

Adds a copy of the congruence `c` to polyhedron of `ph`.

10.156.2.174 `int ppl_Polyhedron_add_congruences` (`ppl_Polyhedron_t ph`,
`ppl_const_Congruence_System_t cs`) [**related**]

Adds a copy of the system of congruences `cs` to the polyhedron `ph`.

10.156.2.175 `int ppl_Polyhedron_add_constraint` (`ppl_Polyhedron_t ph`, `ppl_const_Constraint_t`
`c`) [**related**]

Adds a copy of the constraint `c` to the system of constraints of `ph`.

10.156.2.176 `int ppl_Polyhedron_add_constraints` (`ppl_Polyhedron_t ph`,
`ppl_const_Constraint_System_t cs`) [**related**]

Adds a copy of the system of constraints `cs` to the system of constraints of `ph`.

10.156.2.177 `int ppl_Polyhedron_add_generator` (`ppl_Polyhedron_t ph`, `ppl_const_Generator_t g`)
 [**related**]

Adds a copy of the generator `g` to the system of generators of `ph`.

10.156.2.178 `int ppl_Polyhedron_add_generators` (`ppl_Polyhedron_t ph`,
`ppl_const_Generator_System_t gs`) [**related**]

Adds a copy of the system of generators `gs` to the system of generators of `ph`.

10.156.2.179 `int ppl_Polyhedron_add_recycled_congruences` (`ppl_Polyhedron_t ph`,
`ppl_Congruence_System_t cs`) [**related**]

Adds the system of congruences *cs* to the polyhedron *ph*.

Warning

This function modifies the congruence system referenced by *cs*: upon return, no assumption can be made on its value.

10.156.2.180 `int ppl_Polyhedron_add_recycled_constraints (ppl_Polyhedron_t ph,
ppl_Constraint_System_t cs)` [**related**]

Adds the system of constraints *cs* to the system of constraints of *ph*.

Warning

This function modifies the constraint system referenced by *cs*: upon return, no assumption can be made on its value.

10.156.2.181 `int ppl_Polyhedron_add_recycled_generators (ppl_Polyhedron_t ph,
ppl_Generator_System_t gs)` [**related**]

Adds the system of generators *gs* to the system of generators of *ph*.

Warning

This function modifies the generator system referenced by *gs*: upon return, no assumption can be made on its value.

10.156.2.182 `int ppl_Polyhedron_add_space_dimensions_and_embed (ppl_Polyhedron_t ph,
ppl_dimension_type d)` [**related**]

Adds *d* new dimensions to the space enclosing the polyhedron *ph* and to *ph* itself.

10.156.2.183 `int ppl_Polyhedron_add_space_dimensions_and_project (ppl_Polyhedron_t ph,
ppl_dimension_type d)` [**related**]

Adds *d* new dimensions to the space enclosing the polyhedron *ph*.

10.156.2.184 `int ppl_Polyhedron_affine_dimension (ppl_const_Polyhedron_t ph,
ppl_dimension_type * m)` [**related**]

Writes to *m* the affine dimension of *ph* (not to be confused with the dimension of its enclosing vector space) or 0, if *ph* is empty.

10.156.2.185 `int ppl_Polyhedron_affine_image (ppl_Polyhedron_t ph, ppl_dimension_type var,
ppl_const_Linear_Expression_t le, ppl_const_Coefficient_t d)` [**related**]

Transforms the polyhedron *ph*, assigning an affine expression to the specified variable.

Parameters

- ph* The polyhedron that is transformed;
- var* The variable to which the affine expression is assigned;
- le* The numerator of the affine expression;
- d* The denominator of the affine expression.

10.156.2.186 `int ppl_Polyhedron_affine_preimage (ppl_Polyhedron_t ph, ppl_dimension_type
var, ppl_const_Linear_Expression_t le, ppl_const_Coefficient_t d)` [**related**]

Transforms the polyhedron *ph*, substituting an affine expression to the specified variable.

Parameters

- ph* The polyhedron that is transformed;
- var* The variable to which the affine expression is substituted;
- le* The numerator of the affine expression;
- d* The denominator of the affine expression.

10.156.2.187 `int ppl_Polyhedron_ascii_dump (ppl_const_Polyhedron_t x, FILE * stream)`
[**related**]

Dumps an ascii representation of *x* on *stream*.

10.156.2.188 `int ppl_Polyhedron_ascii_load (ppl_Polyhedron_t x, FILE * stream)` [**related**]

Loads an ascii representation of *x* from *stream*.

10.156.2.189 `int ppl_Polyhedron_BHRZ03_widening_assign (ppl_Polyhedron_t x,
ppl_const_Polyhedron_t y)` [**related**]

If the polyhedron *y* is contained in (or equal to) the polyhedron *x*, assigns to *x* the *BHRZ03-widening* of *x* and *y*.

10.156.2.190 `int ppl_Polyhedron_BHRZ03_widening_assign_with_tokens (ppl_Polyhedron_t x,
ppl_const_Polyhedron_t y, unsigned *tp) [related]`

If the polyhedron y is contained in (or equal to) the polyhedron x , assigns to x the *BHRZ03-widening* of x and y . If tp is not the null pointer, the *widening with tokens* delay technique is applied with $*tp$ available tokens.

10.156.2.191 `int ppl_Polyhedron_bounded_affine_image (ppl_Polyhedron_t
ph, ppl_dimension_type var, ppl_const_Linear_Expression_t lb,
ppl_const_Linear_Expression_t ub, ppl_const_Coefficient_t d) [related]`

Assigns to ph the image of ph with respect to the *generalized affine transfer relation* $\frac{lb}{d} \leq \text{var}' \leq \frac{ub}{d}$.

Parameters

- ph** The polyhedron that is transformed;
- var** The variable bounded by the generalized affine transfer relation;
- lb** The numerator of the lower bounding affine expression;
- ub** The numerator of the upper bounding affine expression;
- d** The (common) denominator of the lower and upper bounding affine expressions.

10.156.2.192 `int ppl_Polyhedron_bounded_affine_preimage (ppl_Polyhedron_t
ph, ppl_dimension_type var, ppl_const_Linear_Expression_t lb,
ppl_const_Linear_Expression_t ub, ppl_const_Coefficient_t d) [related]`

Assigns to ph the preimage of ph with respect to the *generalized affine transfer relation* $\frac{lb}{d} \leq \text{var}' \leq \frac{ub}{d}$.

Parameters

- ph** The polyhedron that is transformed;
- var** The variable bounded by the generalized affine transfer relation;
- lb** The numerator of the lower bounding affine expression;
- ub** The numerator of the upper bounding affine expression;
- d** The (common) denominator of the lower and upper bounding affine expressions.

10.156.2.193 `int ppl_Polyhedron_bounded_BHRZ03_extrapolation_assign (ppl_Polyhedron_t x,
ppl_const_Polyhedron_t y, ppl_const_Constraint_System_t cs) [related]`

If the polyhedron y is contained in (or equal to) the polyhedron x , assigns to x the *BHRZ03-widening* of x and y intersected with the constraints in cs that are satisfied by all the points of x , further intersected with all the constraints of the form $\pm v \leq r$ and $\pm v < r$, with $r \in \mathbb{Q}$, that are satisfied by all the points of x .

10.156.2.194 `int ppl_Polyhedron_bounded_BHRZ03_extrapolation_assign_with_tokens`
 (`ppl_Polyhedron_t x`, `ppl_const_Polyhedron_t y`, `ppl_const_Constraint_System_t cs`,
`unsigned * tp`) [**related**]

If the polyhedron y is contained in (or equal to) the polyhedron x , assigns to x the *BHRZ03-widening* of x and y intersected with the constraints in cs that are satisfied by all the points of x , further intersected with all the constraints of the form $\pm v \leq r$ and $\pm v < r$, with $r \in \mathbb{Q}$, that are satisfied by all the points of x . If tp is not the null pointer, the *widening with tokens* delay technique is applied with $*tp$ available tokens.

10.156.2.195 `int ppl_Polyhedron_bounded_H79_extrapolation_assign` (`ppl_Polyhedron_t x`,
`ppl_const_Polyhedron_t y`, `ppl_const_Constraint_System_t cs`) [**related**]

If the polyhedron y is contained in (or equal to) the polyhedron x , assigns to x the *H79-widening* of x and y intersected with the constraints in cs that are satisfied by all the points of x , further intersected with all the constraints of the form $\pm v \leq r$ and $\pm v < r$, with $r \in \mathbb{Q}$, that are satisfied by all the points of x .

10.156.2.196 `int ppl_Polyhedron_bounded_H79_extrapolation_assign_with_tokens`
 (`ppl_Polyhedron_t x`, `ppl_const_Polyhedron_t y`, `ppl_const_Constraint_System_t cs`,
`unsigned * tp`) [**related**]

If the polyhedron y is contained in (or equal to) the polyhedron x , assigns to x the *H79-widening* of x and y intersected with the constraints in cs that are satisfied by all the points of x , further intersected with all the constraints of the form $\pm v \leq r$ and $\pm v < r$, with $r \in \mathbb{Q}$, that are satisfied by all the points of x . If tp is not the null pointer, the *widening with tokens* delay technique is applied with $*tp$ available tokens.

10.156.2.197 `int ppl_Polyhedron_bounds_from_above` (`ppl_const_Polyhedron_t ph`,
`ppl_const_Linear_Expression_t le`) [**related**]

Returns a positive integer if le is bounded from above in ph ; returns 0 otherwise.

10.156.2.198 `int ppl_Polyhedron_bounds_from_below` (`ppl_const_Polyhedron_t ph`,
`ppl_const_Linear_Expression_t le`) [**related**]

Returns a positive integer if le is bounded from below in ph ; returns 0 otherwise.

10.156.2.199 `int ppl_Polyhedron_concatenate_assign` (`ppl_Polyhedron_t x`,
`ppl_const_Polyhedron_t y`) [**related**]

Seeing a polyhedron as a set of tuples (its points), assigns to x all the tuples that can be obtained by concatenating, in the order given, a tuple of x with a tuple of y .

10.156.2.200 `int ppl_Polyhedron_constrains (ppl_Polyhedron_t ph, ppl_dimension_type var)`
[related]

Returns a positive integer if *ph* constrains *var*; returns 0 if *ph* does not constrain *var*.

10.156.2.201 `int ppl_Polyhedron_contains_integer_point (ppl_const_Polyhedron_t ph)`
[related]

Returns a positive integer if *ph* contains at least one integer point; returns 0 otherwise.

10.156.2.202 `int ppl_Polyhedron_contains_Polyhedron (ppl_const_Polyhedron_t x,
ppl_const_Polyhedron_t y)` **[related]**

Returns a positive integer if *x* contains or is equal to *y*; returns 0 if it does not.

10.156.2.203 `int ppl_Polyhedron_difference_assign (ppl_Polyhedron_t x, ppl_const_Polyhedron_t
y)` **[related]**

Same as `ppl_Polyhedron_poly_difference_assign(x, y)`.

10.156.2.204 `int ppl_Polyhedron_drop_some_non_integer_points (ppl_Polyhedron_t ph, int
complexity)` **[related]**

10.156.2.205 `int ppl_Polyhedron_drop_some_non_integer_points_2 (ppl_Polyhedron_t ph,
ppl_dimension_type ds[], size_t n, int complexity)` **[related]**

10.156.2.206 `int ppl_Polyhedron_equals_Polyhedron (ppl_const_Polyhedron_t x,
ppl_const_Polyhedron_t y)` **[related]**

Returns a positive integer if *x* and *y* are the same polyhedron; returns 0 if they are different.

Note that *x* and *y* may be topology- and/or dimension-incompatible polyhedra: in those cases, the value 0 is returned.

10.156.2.207 `int ppl_Polyhedron_expand_space_dimension (ppl_Polyhedron_t ph,
ppl_dimension_type d, ppl_dimension_type m)` **[related]**

Expands the d -th dimension of the vector space enclosing ph to m new space dimensions.

10.156.2.208 `int ppl_Polyhedron_external_memory_in_bytes (ppl_const_Polyhedron_t  $ph$ , size_t *  $sz$ )` [**related**]

Writes to sz a lower bound to the size in bytes of the memory managed by ph .

10.156.2.209 `int ppl_Polyhedron_fold_space_dimensions (ppl_Polyhedron_t  $ph$ , ppl_dimension_type  $ds[]$ , size_t  $n$ , ppl_dimension_type  $d$ )` [**related**]

Modifies ph by *folding* the space dimensions contained in the first n positions of the array ds into dimension d . The presence of duplicates in ds is a waste but an innocuous one.

10.156.2.210 `int ppl_Polyhedron_frequency (ppl_const_Polyhedron_t  $ph$ , ppl_const_Linear_Expression_t  $le$ , ppl_Coefficient_t  $ext_{fn}$ , ppl_Coefficient_t  $ext_{fd}$ , ppl_Coefficient_t  $ext_{vn}$ , ppl_Coefficient_t  $ext_{vd}$ )` [**related**]

10.156.2.211 `int ppl_Polyhedron_generalized_affine_image (ppl_Polyhedron_t  $ph$ , ppl_dimension_type  $var$ , enum ppl_enum_Constraint_Type  $relsym$ , ppl_const_Linear_Expression_t  $le$ , ppl_const_Coefficient_t  $d$ )` [**related**]

Assigns to ph the image of ph with respect to the *generalized affine transfer relation* $var' \bowtie \frac{le}{d}$, where $\bowtie$ is the relation symbol encoded by $relsym$.

Parameters

- ph The polyhedron that is transformed;
- var The left hand side variable of the generalized affine transfer relation;
- $relsym$ The relation symbol;
- le The numerator of the right hand side affine expression;
- d The denominator of the right hand side affine expression.

10.156.2.212 `int ppl_Polyhedron_generalized_affine_image_lhs_rhs (ppl_Polyhedron_t  $ph$ , ppl_const_Linear_Expression_t  $lhs$ , enum ppl_enum_Constraint_Type  $relsym$ , ppl_const_Linear_Expression_t  $rhs$ )` [**related**]

Assigns to ph the image of ph with respect to the *generalized affine transfer relation* $lhs' \bowtie rhs$, where $\bowtie$ is the relation symbol encoded by $relsym$.

Parameters

- ph The polyhedron that is transformed;

lhs The left hand side affine expression;
relsym The relation symbol;
rhs The right hand side affine expression.

10.156.2.213 `int ppl_Polyhedron_generalized_affine_preimage (ppl_Polyhedron_t ph, ppl_dimension_type var, enum ppl_enum_Constraint_Type relsym, ppl_const_Linear_Expression_t le, ppl_const_Coefficient_t d) [related]`

Assigns to `ph` the preimage of `ph` with respect to the *generalized affine transfer relation* $var' \bowtie \frac{le}{d}$, where $\bowtie$ is the relation symbol encoded by `relsym`.

Parameters

ph The polyhedron that is transformed;
var The left hand side variable of the generalized affine transfer relation;
relsym The relation symbol;
le The numerator of the right hand side affine expression;
d The denominator of the right hand side affine expression.

10.156.2.214 `int ppl_Polyhedron_generalized_affine_preimage_lhs_rhs (ppl_Polyhedron_t ph, ppl_const_Linear_Expression_t lhs, enum ppl_enum_Constraint_Type relsym, ppl_const_Linear_Expression_t rhs) [related]`

Assigns to `ph` the preimage of `ph` with respect to the *generalized affine transfer relation* $lhs' \bowtie rhs$, where $\bowtie$ is the relation symbol encoded by `relsym`.

Parameters

ph The polyhedron that is transformed;
lhs The left hand side affine expression;
relsym The relation symbol;
rhs The right hand side affine expression.

10.156.2.215 `int ppl_Polyhedron_get_congruences (ppl_const_Polyhedron_t ph, ppl_const_Congruence_System_t * pcs) [related]`

Writes at address `pcs` a const handle to a system of congruences approximating the polyhedron `ph`.

10.156.2.216 `int ppl_Polyhedron_get_constraints (ppl_const_Polyhedron_t ph, ppl_const_Constraint_System_t * pcs) [related]`

Writes a const handle to the constraint system defining the polyhedron `ph` at address `pcs`.

10.156.2.217 `int ppl_Polyhedron_get_generators (ppl_const_Polyhedron_t ph,
ppl_const_Generator_System_t * pgs)` [**related**]

Writes a const handle to the generator system defining the polyhedron *ph* at address *pgs*.

10.156.2.218 `int ppl_Polyhedron_get_minimized_congruences (ppl_const_Polyhedron_t ph,
ppl_const_Congruence_System_t * pcs)` [**related**]

Writes at address *pcs* a const handle to a system of minimized congruences approximating the polyhedron *ph*.

10.156.2.219 `int ppl_Polyhedron_get_minimized_constraints (ppl_const_Polyhedron_t ph,
ppl_const_Constraint_System_t * pcs)` [**related**]

Writes a const handle to the minimized constraint system defining the polyhedron *ph* at address *pcs*.

10.156.2.220 `int ppl_Polyhedron_get_minimized_generators (ppl_const_Polyhedron_t ph,
ppl_const_Generator_System_t * pgs)` [**related**]

Writes a const handle to the minimized generator system defining the polyhedron *ph* at address *pgs*.

10.156.2.221 `int ppl_Polyhedron_H79_widening_assign (ppl_Polyhedron_t x,
ppl_const_Polyhedron_t y)` [**related**]

If the polyhedron *y* is contained in (or equal to) the polyhedron *x*, assigns to *x* the *H79-widening* of *x* and *y*.

10.156.2.222 `int ppl_Polyhedron_H79_widening_assign_with_tokens (ppl_Polyhedron_t x,
ppl_const_Polyhedron_t y, unsigned * tp)` [**related**]

If the polyhedron *y* is contained in (or equal to) the polyhedron *x*, assigns to *x* the *H79-widening* of *x* and *y*. If *tp* is not the null pointer, the *widening with tokens* delay technique is applied with **tp* available tokens.

10.156.2.223 `int ppl_Polyhedron_intersection_assign (ppl_Polyhedron_t x,
ppl_const_Polyhedron_t y)` [**related**]

Intersects *x* with polyhedron *y* and assigns the result to *x*.

10.156.2.224 int ppl_Polyhedron_is_bounded (ppl_const_Polyhedron_t *ph*) [related]

Returns a positive integer if *ph* is bounded; returns 0 if *ph* is unbounded.

10.156.2.225 int ppl_Polyhedron_is_discrete (ppl_const_Polyhedron_t *ph*) [related]

Returns a positive integer if *ph* is a discrete set; returns 0 if *ph* is not a discrete set.

**10.156.2.226 int ppl_Polyhedron_is_disjoint_from_Polyhedron (ppl_const_Polyhedron_t *x*,
ppl_const_Polyhedron_t *y*) [related]**

Returns a positive integer if *x* and *y* are disjoint; returns 0 if they are not.

10.156.2.227 int ppl_Polyhedron_is_empty (ppl_const_Polyhedron_t *ph*) [related]

Returns a positive integer if *ph* is empty; returns 0 if *ph* is not empty.

**10.156.2.228 int ppl_Polyhedron_is_topologically_closed (ppl_const_Polyhedron_t *ph*)
[related]**

Returns a positive integer if *ph* is topologically closed; returns 0 if *ph* is not topologically closed.

10.156.2.229 int ppl_Polyhedron_is_universe (ppl_const_Polyhedron_t *ph*) [related]

Returns a positive integer if *ph* is a universe polyhedron; returns 0 if it is not.

**10.156.2.230 int ppl_Polyhedron_limited_BHRZ03_extrapolation_assign (ppl_Polyhedron_t *x*,
ppl_const_Polyhedron_t *y*, ppl_const_Constraint_System_t *cs*) [related]**

If the polyhedron *y* is contained in (or equal to) the polyhedron *x*, assigns to *x* the *BHRZ03-widening* of *x* and *y* intersected with the constraints in *cs* that are satisfied by all the points of *x*.

**10.156.2.231 int ppl_Polyhedron_limited_BHRZ03_extrapolation_assign_with_tokens
(ppl_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*, ppl_const_Constraint_System_t *cs*,
unsigned * *tp*) [related]**

If the polyhedron y is contained in (or equal to) the polyhedron x , assigns to x the *BHRZ03-widening* of x and y intersected with the constraints in cs that are satisfied by all the points of x . If tp is not the null pointer, the *widening with tokens* delay technique is applied with $*tp$ available tokens.

10.156.2.232 `int ppl_Polyhedron_limited_H79_extrapolation_assign (ppl_Polyhedron_t x,
ppl_const_Polyhedron_t y, ppl_const_Constraint_System_t cs) [related]`

If the polyhedron y is contained in (or equal to) the polyhedron x , assigns to x the *H79-widening* of x and y intersected with the constraints in cs that are satisfied by all the points of x .

10.156.2.233 `int ppl_Polyhedron_limited_H79_extrapolation_assign_with_tokens
(ppl_Polyhedron_t x, ppl_const_Polyhedron_t y, ppl_const_Constraint_System_t cs,
unsigned *tp) [related]`

If the polyhedron y is contained in (or equal to) the polyhedron x , assigns to x the *H79-widening* of x and y intersected with the constraints in cs that are satisfied by all the points of x . If tp is not the null pointer, the *widening with tokens* delay technique is applied with $*tp$ available tokens.

10.156.2.234 `int ppl_Polyhedron_linear_partition (ppl_const_Polyhedron_t
x, ppl_const_Polyhedron_t y, ppl_Polyhedron_t *p_inters,
ppl_Pointset_Powerset_NNC_Polyhedron_t *p_rest) [related]`

10.156.2.235 `int ppl_Polyhedron_map_space_dimensions (ppl_Polyhedron_t ph,
ppl_dimension_type maps[], size_t n) [related]`

Remaps the dimensions of the vector space according to a *partial function*. This function is specified by means of the `maps` array, which has n entries.

The partial function is defined on dimension i if $i < n$ and `maps[i] != ppl_not_a_dimension`; otherwise it is undefined on dimension i . If the function is defined on dimension i , then dimension i is mapped onto dimension `maps[i]`.

The result is undefined if `maps` does not encode a partial function with the properties described in the *specification of the mapping operator*.

10.156.2.236 `int ppl_Polyhedron_maximize (ppl_const_Polyhedron_t ph, ppl_const_Linear_-
Expression_t le, ppl_Coefficient_t sup_n, ppl_Coefficient_t sup_d, int *pmaximum)
[related]`

The same as `ppl_Polyhedron_maximize_with_point`, but without the output argument for the location where the supremum value is reached.

10.156.2.237 `int ppl_Polyhedron_maximize_with_point (ppl_const_Polyhedron_t ph,
ppl_const_Linear_Expression_t le, ppl_Coefficient_t sup_n, ppl_Coefficient_t
sup_d, int *pmaximum, ppl_Generator_t point)` [**related**]

Returns a positive integer if *ph* is not empty and *le* is bounded from above in *ph*, in which case the supremum value and a point where *le* reaches it are computed.

Parameters

- ph* The polyhedron constraining *le*;
- le* The linear expression to be maximized subject to *ph*;
- sup_n* Will be assigned the numerator of the supremum value;
- sup_d* Will be assigned the denominator of the supremum value;
- pmaximum* Will store 1 in this location if the supremum is also the maximum, will store 0 otherwise;
- point* Will be assigned the point or closure point where *le* reaches the extremum value.

If *ph* is empty or *le* is not bounded from above, 0 will be returned and *sup_n*, *sup_d*, *pmaximum* and *point* will be left untouched.

10.156.2.238 `int ppl_Polyhedron_minimize (ppl_const_Polyhedron_t ph, ppl_const_Linear_Expression_t le,
ppl_Coefficient_t ext_n, ppl_Coefficient_t ext_d, int *poptimum)` [**related**]

10.156.2.239 `int ppl_Polyhedron_minimize_with_point (ppl_const_Polyhedron_t ph,
ppl_const_Linear_Expression_t le, ppl_Coefficient_t inf_n, ppl_Coefficient_t inf_d,
int *pminimum)` [**related**]

The same as `ppl_Polyhedron_minimize_with_point`, but without the output argument for the location where the infimum value is reached.

10.156.2.240 `int ppl_Polyhedron_minimize_with_point (ppl_const_Polyhedron_t ph,
ppl_const_Linear_Expression_t le, ppl_Coefficient_t inf_n, ppl_Coefficient_t inf_d,
int *pminimum, ppl_Generator_t point)` [**related**]

Returns a positive integer if *ph* is not empty and *le* is bounded from below in *ph*, in which case the infimum value and a point where *le* reaches it are computed.

Parameters

- ph* The polyhedron constraining *le*;
- le* The linear expression to be minimized subject to *ph*;
- inf_n* Will be assigned the numerator of the infimum value;
- inf_d* Will be assigned the denominator of the infimum value;

pminimum Will store 1 in this location if the infimum is also the minimum, will store 0 otherwise;
point Will be assigned the point or closure point where *le* reaches the extremum value.

If *ph* is empty or *le* is not bounded from below, 0 will be returned and *sup_n*, *sup_d*, **pmaximum* and *point* will be left untouched.

10.156.2.241 `int ppl_Polyhedron_OK (ppl_const_Polyhedron_t ph)` [**related**]

Returns a positive integer if *ph* is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if *ph* is broken. Useful for debugging purposes.

10.156.2.242 `int ppl_Polyhedron_poly_difference_assign (ppl_Polyhedron_t x,
ppl_const_Polyhedron_t y)` [**related**]

Assigns to *x* the *poly-difference* of *x* and *y*.

10.156.2.243 `int ppl_Polyhedron_poly_hull_assign (ppl_Polyhedron_t x, ppl_const_Polyhedron_t
y)` [**related**]

Assigns to *x* the *poly-hull* of *x* and *y*.

10.156.2.244 `int ppl_Polyhedron_poly_hull_assign_if_exact (ppl_Polyhedron_t x,
ppl_const_Polyhedron_t y)` [**related**]

10.156.2.245 `int ppl_Polyhedron_refine_with_congruence (ppl_Polyhedron_t ph,
ppl_const_Congruence_t c)` [**related**]

Refines *ph* using congruence *c*.

10.156.2.246 `int ppl_Polyhedron_refine_with_congruences (ppl_Polyhedron_t ph,
ppl_const_Congruence_System_t cs)` [**related**]

Refines *ph* using the congruences in *cs*.

10.156.2.247 `int ppl_Polyhedron_refine_with_constraint (ppl_Polyhedron_t ph,
ppl_const_Constraint_t c)` [**related**]

Refines *ph* using constraint *c*.

10.156.2.248 `int ppl_Polyhedron_refine_with_constraints (ppl_Polyhedron_t ph,
ppl_const_Constraint_System_t cs)` [**related**]

Refines *ph* using the constraints in *cs*.

10.156.2.249 `int ppl_Polyhedron_relation_with_Congruence (ppl_const_Polyhedron_t ph,
ppl_const_Congruence_t c)` [**related**]

10.156.2.250 `int ppl_Polyhedron_relation_with_Constraint (ppl_const_Polyhedron_t ph,
ppl_const_Constraint_t c)` [**related**]

Checks the relation between the polyhedron *ph* and the constraint *c*.

If successful, returns a non-negative integer that is obtained as the bitwise or of the bits (chosen among PPL_POLY_CON_RELATION_IS_DISJOINT, PPL_POLY_CON_RELATION_STRICTLY_INTERSECTS, PPL_POLY_CON_RELATION_IS_INCLUDED, and PPL_POLY_CON_RELATION_SATURATES) that describe the relation between *ph* and *c*.

10.156.2.251 `int ppl_Polyhedron_relation_with_Generator (ppl_const_Polyhedron_t ph,
ppl_const_Generator_t g)` [**related**]

Checks the relation between the polyhedron *ph* and the generator *g*.

If successful, returns a non-negative integer that is obtained as the bitwise or of the bits (only PPL_POLY_GEN_RELATION_SUBSUMES, at present) that describe the relation between *ph* and *g*.

10.156.2.252 `int ppl_Polyhedron_remove_higher_space_dimensions (ppl_Polyhedron_t ph,
ppl_dimension_type d)` [**related**]

Removes the higher dimensions from the vector space enclosing *ph* so that, upon successful return, the new space dimension is *d*.

10.156.2.253 `int ppl_Polyhedron_remove_space_dimensions (ppl_Polyhedron_t ph,
ppl_dimension_type ds[], size_t n)` [**related**]

Removes from the vector space enclosing *ph* the space dimensions that are specified in first *n* positions of the array *ds*. The presence of duplicates in *ds* is a waste but an innocuous one.

10.156.2.254 `int ppl_Polyhedron_simplify_using_context_assign (ppl_Polyhedron_t x,
ppl_const_Polyhedron_t y) [related]`

Assigns to x the *meet-preserving simplification* of x with respect to context y . Returns a positive integer if x and y have a nonempty intersection; returns 0 if they are disjoint.

10.156.2.255 `int ppl_Polyhedron_space_dimension (ppl_const_Polyhedron_t ph,
ppl_dimension_type * m) [related]`

Writes to m the dimension of the vector space enclosing ph .

10.156.2.256 `int ppl_Polyhedron_strictly_contains_Polyhedron (ppl_const_Polyhedron_t x,
ppl_const_Polyhedron_t y) [related]`

Returns a positive integer if x strictly contains y ; returns 0 if it does not.

10.156.2.257 `int ppl_Polyhedron_time_elapse_assign (ppl_Polyhedron_t x,
ppl_const_Polyhedron_t y) [related]`

Assigns to x the *time-elapse* between the polyhedra x and y .

10.156.2.258 `int ppl_Polyhedron_topological_closure_assign (ppl_Polyhedron_t ph) [related]`

Assigns to ph its topological closure.

10.156.2.259 `int ppl_Polyhedron_total_memory_in_bytes (ppl_const_Polyhedron_t ph, size_t * sz)
[related]`

Writes to sz a lower bound to the size in bytes of the memory managed by ph .

10.156.2.260 `int ppl_Polyhedron_unconstrain_space_dimension (ppl_Polyhedron_t ph,
ppl_dimension_type var) [related]`

Modifies ph by *unconstraining* the space dimension var .

10.156.2.261 `int ppl_Polyhedron_unconstrain_space_dimensions (ppl_Polyhedron_t ph,
ppl_dimension_type ds[], size_t n) [related]`

Modifies `ph` by *unconstraining* the space dimensions that are specified in the first `n` positions of the array `ds`. The presence of duplicates in `ds` is a waste but an innocuous one.

10.156.2.262 `int ppl_Polyhedron_upper_bound_assign (ppl_Polyhedron_t x,
ppl_const_Polyhedron_t y) [related]`

Assigns to `x` an upper bound of `x` and `y`.

For the domain of polyhedra, this is the same as `ppl_Polyhedron_poly_hull_assign(x, y)`.

10.156.2.263 `int ppl_Polyhedron_upper_bound_assign_if_exact (ppl_Polyhedron_t x,
ppl_const_Polyhedron_t y) [related]`

10.156.2.264 `int ppl_Polyhedron_widening_assign (ppl_Polyhedron_t x, ppl_const_Polyhedron_t
y) [related]`

10.156.2.265 `int ppl_Polyhedron_widening_assign_with_tokens (ppl_Polyhedron_t x,
ppl_const_Polyhedron_t y, unsigned * tp) [related]`

10.156.2.266 `int ppl_Polyhedron_wrap_assign (ppl_Polyhedron_t ph, ppl_dimension_type
ds[], size_t n, enum ppl_enum_Bounded_Integer_Type_Width w, enum
ppl_enum_Bounded_Integer_Type_Representation r, enum ppl_enum_Bounded_
Integer_Type_Overflow o, const ppl_const_Constraint_System_t * pcs, unsigned
complexity_threshold, int wrap_individually) [related]`

10.156.2.267 `int ppl_termination_test_MS_C_Polyhedron (ppl_const_Polyhedron_t pset)
[related]`

10.156.2.268 `int ppl_termination_test_MS_C_Polyhedron_2 (ppl_const_Polyhedron_t pset_before,
ppl_const_Polyhedron_t pset_after) [related]`

10.156.2.269 `int ppl_termination_test_MS_NNC_Polyhedron (ppl_const_Polyhedron_t pset)
[related]`

Assigns to `ph` the polyhedron obtained from `ph` by "wrapping" the vector space defined by the first `n` space dimensions in `ds[]`.

Parameters

- ph* The polyhedron that is transformed;
- ds[]* Specifies the space dimensions to be wrapped.
- n* The first `n` space dimensions in the array `ds[]` will be wrapped.
- w* The width of the bounded integer type corresponding to all the dimensions to be wrapped.
- r* The representation of the bounded integer type corresponding to all the dimensions to be wrapped.
- o* The overflow behavior of the bounded integer type corresponding to all the dimensions to be wrapped.
- pcs* Possibly null pointer to a constraint system whose space dimensions are the first `n` dimensions in `ds[]`. If `*pcs` depends on variables not in `vars`, the behavior is undefined. When non-null, the constraint system is assumed to represent the conditional or looping construct guard with respect to which wrapping is performed. Since wrapping requires the computation of upper bounds

and due to non-distributivity of constraint refinement over upper bounds, passing a constraint system in this way can be more precise than refining the result of the wrapping operation with the constraints in `cs`.

complexity_threshold A precision parameter where higher values result in possibly improved precision.

wrap_individually Non-zero if the dimensions should be wrapped individually (something that results in much greater efficiency to the detriment of precision).

10.159.1 Detailed Description

Types and functions for [ppl_Uint32_Box_tag](#).

10.159.2 Friends And Related Function Documentation

- 10.159.2.1** int [ppl_all_affine_ranking_functions_MS_Uint32_Box](#) (ppl_const_Uint32_Box_t pset, ppl_Polyhedron_t ph) [**related**]

10.159.2.2 `int ppl_all_affine_ranking_functions_MS_Uint32_Box_2 (ppl_const_Uint32_Box_t pset_before, ppl_const_Uint32_Box_t pset_after, ppl_Polyhedron_t ph)` [related]

10.159.2.3 `int ppl_all_affine_ranking_functions_PR_Uint32_Box (ppl_const_Uint32_Box_t pset, ppl_Polyhedron_t ph)` [related]

10.159.2.4 `int ppl_all_affine_ranking_functions_PR_Uint32_Box_2 (ppl_const_Uint32_Box_t pset_before, ppl_const_Uint32_Box_t pset_after, ppl_Polyhedron_t ph)` [related]

10.159.2.5 `int ppl_assign_Uint32_Box_from_Uint32_Box (ppl_Uint32_Box_t dst, ppl_const_Uint32_Box_t src)` [related]

10.159.2.6 `int ppl_delete_Uint32_Box (ppl_const_Uint32_Box_t ph)` [related]

10.159.2.7 `int ppl_new_Uint32_Box_from_BD_Shape_double (ppl_Uint32_Box_t * pph, ppl_const_BD_Shape_double_t ph)` [related]

10.159.2.8 `int ppl_new_Uint32_Box_from_BD_Shape_double_with_complexity (ppl_Uint32_Box_t * pph, ppl_const_BD_Shape_double_t ph, int complexity)` [related]

10.159.2.9 `int ppl_new_Uint32_Box_from_BD_Shape_float (ppl_Uint32_Box_t * pph, ppl_const_BD_Shape_float_t ph)` [related]

10.159.2.10 `int ppl_new_Uint32_Box_from_BD_Shape_float_with_complexity (ppl_Uint32_Box_t * pph, ppl_const_BD_Shape_float_t ph, int complexity)` [related]

- 10.159.2.11** `int ppl_new_Uint32_Box_from_BD_Shape_int16_t (ppl_Uint32_Box_t * pph,
ppl_const_BD_Shape_int16_t_t ph)` [**related**]
- 10.159.2.12** `int ppl_new_Uint32_Box_from_BD_Shape_int16_t_with_complexity
(ppl_Uint32_Box_t * pph, ppl_const_BD_Shape_int16_t_t ph, int complexity)`
[**related**]
- 10.159.2.13** `int ppl_new_Uint32_Box_from_BD_Shape_int32_t (ppl_Uint32_Box_t * pph,
ppl_const_BD_Shape_int32_t_t ph)` [**related**]
- 10.159.2.14** `int ppl_new_Uint32_Box_from_BD_Shape_int32_t_with_complexity
(ppl_Uint32_Box_t * pph, ppl_const_BD_Shape_int32_t_t ph, int complexity)`
[**related**]
- 10.159.2.15** `int ppl_new_Uint32_Box_from_BD_Shape_int64_t (ppl_Uint32_Box_t * pph,
ppl_const_BD_Shape_int64_t_t ph)` [**related**]
- 10.159.2.16** `int ppl_new_Uint32_Box_from_BD_Shape_int64_t_with_complexity
(ppl_Uint32_Box_t * pph, ppl_const_BD_Shape_int64_t_t ph, int complexity)`
[**related**]
- 10.159.2.17** `int ppl_new_Uint32_Box_from_BD_Shape_int8_t (ppl_Uint32_Box_t * pph,
ppl_const_BD_Shape_int8_t_t ph)` [**related**]
- 10.159.2.18** `int ppl_new_Uint32_Box_from_BD_Shape_int8_t_with_complexity
(ppl_Uint32_Box_t * pph, ppl_const_BD_Shape_int8_t_t ph, int complexity)`
[**related**]
- 10.159.2.19** `int ppl_new_Uint32_Box_from_BD_Shape_long_double (ppl_Uint32_Box_t * pph,
ppl_const_BD_Shape_long_double_t ph)` [**related**]

- 10.159.2.20 `int ppl_new_Uint32_Box_from_BD_Shape_long_double_with_complexity`
(`ppl_Uint32_Box_t * pph`, `ppl_const_BD_Shape_long_double_t ph`, `int complexity`)
[related]
- 10.159.2.21 `int ppl_new_Uint32_Box_from_BD_Shape_mpq_class` (`ppl_Uint32_Box_t * pph`,
`ppl_const_BD_Shape_mpq_class_t ph`) [related]
- 10.159.2.22 `int ppl_new_Uint32_Box_from_BD_Shape_mpq_class_with_complexity`
(`ppl_Uint32_Box_t * pph`, `ppl_const_BD_Shape_mpq_class_t ph`, `int complexity`)
[related]
- 10.159.2.23 `int ppl_new_Uint32_Box_from_BD_Shape_mpz_class` (`ppl_Uint32_Box_t * pph`,
`ppl_const_BD_Shape_mpz_class_t ph`) [related]
- 10.159.2.24 `int ppl_new_Uint32_Box_from_BD_Shape_mpz_class_with_complexity`
(`ppl_Uint32_Box_t * pph`, `ppl_const_BD_Shape_mpz_class_t ph`, `int complexity`)
[related]
- 10.159.2.25 `int ppl_new_Uint32_Box_from_C_Polyhedron` (`ppl_Uint32_Box_t * pph`,
`ppl_const_Polyhedron_t ph`) [related]
- 10.159.2.26 `int ppl_new_Uint32_Box_from_C_Polyhedron_with_complexity` (`ppl_Uint32_Box_t *`
`pph`, `ppl_const_Polyhedron_t ph`, `int complexity`) [related]
- 10.159.2.27 `int ppl_new_Uint32_Box_from_Congruence_System` (`ppl_Uint32_Box_t * pph`,
`ppl_const_Congruence_System_t cs`) [related]
- 10.159.2.28 `int ppl_new_Uint32_Box_from_Constraint_System` (`ppl_Uint32_Box_t * pph`,
`ppl_const_Constraint_System_t cs`) [related]

- 10.159.2.29 `int ppl_new_Uint32_Box_from_Double_Box (ppl_Uint32_Box_t * pph,
ppl_const_Double_Box_t ph)` [`related`]
- 10.159.2.30 `int ppl_new_Uint32_Box_from_Double_Box_with_complexity (ppl_Uint32_Box_t *
pph, ppl_const_Double_Box_t ph, int complexity)` [`related`]
- 10.159.2.31 `int ppl_new_Uint32_Box_from_Float_Box (ppl_Uint32_Box_t * pph,
ppl_const_Float_Box_t ph)` [`related`]
- 10.159.2.32 `int ppl_new_Uint32_Box_from_Float_Box_with_complexity (ppl_Uint32_Box_t *
pph, ppl_const_Float_Box_t ph, int complexity)` [`related`]
- 10.159.2.33 `int ppl_new_Uint32_Box_from_Generator_System (ppl_Uint32_Box_t * pph,
ppl_const_Generator_System_t cs)` [`related`]
- 10.159.2.34 `int ppl_new_Uint32_Box_from_Grid (ppl_Uint32_Box_t * pph, ppl_const_Grid_t ph)`
[`related`]
- 10.159.2.35 `int ppl_new_Uint32_Box_from_Grid_with_complexity (ppl_Uint32_Box_t * pph,
ppl_const_Grid_t ph, int complexity)` [`related`]
- 10.159.2.36 `int ppl_new_Uint32_Box_from_Int16_Box (ppl_Uint32_Box_t * pph,
ppl_const_Int16_Box_t ph)` [`related`]
- 10.159.2.37 `int ppl_new_Uint32_Box_from_Int16_Box_with_complexity (ppl_Uint32_Box_t *
pph, ppl_const_Int16_Box_t ph, int complexity)` [`related`]

- 10.159.2.38** `int ppl_new_Uint32_Box_from_Int32_Box (ppl_Uint32_Box_t * pph,
ppl_const_Int32_Box_t ph)` [related]
- 10.159.2.39** `int ppl_new_Uint32_Box_from_Int32_Box_with_complexity (ppl_Uint32_Box_t *
pph, ppl_const_Int32_Box_t ph, int complexity)` [related]
- 10.159.2.40** `int ppl_new_Uint32_Box_from_Int64_Box (ppl_Uint32_Box_t * pph,
ppl_const_Int64_Box_t ph)` [related]
- 10.159.2.41** `int ppl_new_Uint32_Box_from_Int64_Box_with_complexity (ppl_Uint32_Box_t *
pph, ppl_const_Int64_Box_t ph, int complexity)` [related]
- 10.159.2.42** `int ppl_new_Uint32_Box_from_Int8_Box (ppl_Uint32_Box_t * pph,
ppl_const_Int8_Box_t ph)` [related]
- 10.159.2.43** `int ppl_new_Uint32_Box_from_Int8_Box_with_complexity (ppl_Uint32_Box_t * pph,
ppl_const_Int8_Box_t ph, int complexity)` [related]
- 10.159.2.44** `int ppl_new_Uint32_Box_from_Long_Double_Box (ppl_Uint32_Box_t * pph,
ppl_const_Long_Double_Box_t ph)` [related]
- 10.159.2.45** `int ppl_new_Uint32_Box_from_Long_Double_Box_with_complexity
(ppl_Uint32_Box_t * pph, ppl_const_Long_Double_Box_t ph, int complexity)`
[related]
- 10.159.2.46** `int ppl_new_Uint32_Box_from_NNC_Polyhedron (ppl_Uint32_Box_t * pph,
ppl_const_Polyhedron_t ph)` [related]

- 10.159.2.47 `int ppl_new_Uint32_Box_from_NNC_Polyhedron_with_complexity`
`(ppl_Uint32_Box_t * pph, ppl_const_Polyhedron_t ph, int complexity)` [`related`]
- 10.159.2.48 `int ppl_new_Uint32_Box_from_Octagonal_Shape_double` `(ppl_Uint32_Box_t * pph,`
`ppl_const_Octagonal_Shape_double_t ph)` [`related`]
- 10.159.2.49 `int ppl_new_Uint32_Box_from_Octagonal_Shape_double_with_complexity`
`(ppl_Uint32_Box_t * pph, ppl_const_Octagonal_Shape_double_t ph, int complexity)`
`[related]`
- 10.159.2.50 `int ppl_new_Uint32_Box_from_Octagonal_Shape_float` `(ppl_Uint32_Box_t * pph,`
`ppl_const_Octagonal_Shape_float_t ph)` [`related`]
- 10.159.2.51 `int ppl_new_Uint32_Box_from_Octagonal_Shape_float_with_complexity`
`(ppl_Uint32_Box_t * pph, ppl_const_Octagonal_Shape_float_t ph, int complexity)`
`[related]`
- 10.159.2.52 `int ppl_new_Uint32_Box_from_Octagonal_Shape_int16_t` `(ppl_Uint32_Box_t * pph,`
`ppl_const_Octagonal_Shape_int16_t ph)` [`related`]
- 10.159.2.53 `int ppl_new_Uint32_Box_from_Octagonal_Shape_int16_t_with_complexity`
`(ppl_Uint32_Box_t * pph, ppl_const_Octagonal_Shape_int16_t ph, int complexity)`
`[related]`
- 10.159.2.54 `int ppl_new_Uint32_Box_from_Octagonal_Shape_int32_t` `(ppl_Uint32_Box_t * pph,`
`ppl_const_Octagonal_Shape_int32_t ph)` [`related`]
- 10.159.2.55 `int ppl_new_Uint32_Box_from_Octagonal_Shape_int32_t_with_complexity`
`(ppl_Uint32_Box_t * pph, ppl_const_Octagonal_Shape_int32_t ph, int complexity)`
`[related]`

Defines

- `#define PPL_PROTO(protos) ()`
- `#define PPL_VERSION "0.11.2"`
A string containing the PPL version.

- #define `PPL_VERSION_MAJOR` 0
The major number of the PPL version.
- #define `PPL_VERSION_MINOR` 11
The minor number of the PPL version.
- #define `PPL_VERSION_REVISION` 2
The revision number of the PPL version.
- #define `PPL_VERSION_BETA` 0
The beta number of the PPL version. This is zero for official releases and nonzero for development snapshots.
- #define `PPL_TYPE_DECLARATION`(Type)
- #define `PPL_DECLARE_PRINT_FUNCTIONS`(Type)
- #define `PPL_DECLARE_ASCII_DUMP_LOAD_FUNCTIONS`(Type)
- #define `PPL_DECLARE_IO_FUNCTIONS`(Type)
- #define `PPL_DECLARE_AND_DOCUMENT_PRINT_FUNCTIONS`(Type)
- #define `PPL_DECLARE_AND_DOCUMENT_ASCII_DUMP_LOAD_FUNCTIONS`(Type)
- #define `PPL_DECLARE_AND_DOCUMENT_IO_FUNCTIONS`(Type)

Typedefs

- typedef size_t `ppl_dimension_type`
An unsigned integral type for representing space dimensions.
- typedef const char * `ppl_io_variable_output_function_type` (`ppl_dimension_type` var)
The type of output functions used for printing variables.

Enumerations

- enum `ppl_enum_error_code` {
`PPL_ERROR_OUT_OF_MEMORY`, `PPL_ERROR_INVALID_ARGUMENT`, `PPL_ERROR_DOMAIN_ERROR`, `PPL_ERROR_LENGTH_ERROR`,
`PPL_ARITHMETIC_OVERFLOW`, `PPL_STDIO_ERROR`, `PPL_ERROR_INTERNAL_ERROR`,
`PPL_ERROR_UNKNOWN_STANDARD_EXCEPTION`,
`PPL_ERROR_UNEXPECTED_ERROR`, `PPL_TIMEOUT_EXCEPTION`, `PPL_ERROR_LOGIC_ERROR` }
Defines the error codes that any function may return.
- enum `ppl_enum_Constraint_Type` {
`PPL_CONSTRAINT_TYPE_LESS_THAN`, `PPL_CONSTRAINT_TYPE_LESS_OR_EQUAL`,
`PPL_CONSTRAINT_TYPE_EQUAL`, `PPL_CONSTRAINT_TYPE_GREATER_OR_EQUAL`,
`PPL_CONSTRAINT_TYPE_GREATER_THAN` }
Describes the relations represented by a constraint.

- enum `ppl_enum_Generator_Type` { `PPL_GENERATOR_TYPE_LINE`, `PPL_GENERATOR_TYPE_RAY`, `PPL_GENERATOR_TYPE_POINT`, `PPL_GENERATOR_TYPE_CLOSURE_POINT` }
Describes the different kinds of generators.
- enum `ppl_enum_Grid_Generator_Type` { `PPL_GRID_GENERATOR_TYPE_LINE`, `PPL_GRID_GENERATOR_TYPE_PARAMETER`, `PPL_GRID_GENERATOR_TYPE_POINT` }
Describes the different kinds of grid generators.
- enum `ppl_enum_Bounded_Integer_Type_Width` { `PPL_BITS_8`, `PPL_BITS_16`, `PPL_BITS_32`, `PPL_BITS_64`, `PPL_BITS_128` }
Widths of bounded integer types.
- enum `ppl_enum_Bounded_Integer_Type_Representation` { `PPL_UNSIGNED`, `PPL_SIGNED_2_COMPLEMENT` }
Representation of bounded integer types.
- enum `ppl_enum_Bounded_Integer_Type_Overflow` { `PPL_OVERFLOW_WRAPS`, `PPL_OVERFLOW_UNDEFINED`, `PPL_OVERFLOW_IMPOSSIBLE` }
Overflow behavior of bounded integer types.

Functions

- int `ppl_initialize` (void)
Initializes the Parma Polyhedra Library. This function must be called before any other function.
- int `ppl_finalize` (void)
Finalizes the Parma Polyhedra Library. This function must be called after any other function.
- int `ppl_set_rounding_for_PPL` (void)
Sets the FPU rounding mode so that the PPL abstractions based on floating point numbers work correctly.
- int `ppl_restore_pre_PPL_rounding` (void)
Sets the FPU rounding mode as it was before initialization of the PPL.
- int `ppl_irrational_precision` (unsigned *p)
*Writes to *p* the precision parameter used for irrational calculations.*
- int `ppl_set_irrational_precision` (unsigned p)
Sets the precision parameter used for irrational calculations.
- int `ppl_version_major` (void)
Returns the major number of the PPL version.
- int `ppl_version_minor` (void)
Returns the minor number of the PPL version.

- `int ppl_version_revision` (void)
Returns the revision number of the PPL version.
- `int ppl_version_beta` (void)
Returns the beta number of the PPL version.
- `int ppl_version` (const char **p)
*Writes to *p a pointer to a character string containing the PPL version.*
- `int ppl_banner` (const char **p)
*Writes to *p a pointer to a character string containing the PPL banner.*
- `int ppl_set_error_handler` (void(*h)(enum `ppl_enum_error_code` code, const char *description))
Installs the user-defined error handler pointed at by h.
- `int ppl_set_timeout` (unsigned time)
Sets the timeout for computations whose completion could require an exponential amount of time.
- `int ppl_reset_timeout` (void)
Resets the timeout time so that the computation is not interrupted.
- `int ppl_set_deterministic_timeout` (unsigned weight)
Sets a threshold for computations whose completion could require an exponential amount of time.
- `int ppl_reset_deterministic_timeout` (void)
Resets the deterministic timeout so that the computation is not interrupted.
- `int ppl_max_space_dimension` (`ppl_dimension_type` *m)
Writes to m the maximum space dimension this library can handle.
- `int ppl_not_a_dimension` (`ppl_dimension_type` *m)
Writes to m a value that does not designate a valid dimension.
- `int ppl_io_print_variable` (`ppl_dimension_type` var)
Pretty-prints var to stdout.
- `int ppl_io_fprint_variable` (FILE *stream, `ppl_dimension_type` var)
Pretty-prints var to the given output stream.
- `int ppl_io_asprint_variable` (char **strp, `ppl_dimension_type` var)
Pretty-prints var to a malloc-allocated string, a pointer to which is returned via strp.
- `int ppl_io_set_variable_output_function` (`ppl_io_variable_output_function_type` *p)
Sets the output function to be used for printing variables to p.
- `int ppl_io_get_variable_output_function` (`ppl_io_variable_output_function_type` **pp)
Writes a pointer to the current variable output function to pp.
- `char * ppl_io_wrap_string` (const char *src, unsigned indent_depth, unsigned preferred_first_line_length, unsigned preferred_line_length)

Utility function for the wrapping of lines of text.

Constructors, Assignment and Destructor

- int `ppl_new_Generator_System_zero_dim_univ` (`ppl_Generator_System_t *pgs`)
- int `ppl_new_Grid_Generator_System_zero_dim_univ` (`ppl_Grid_Generator_System_t *pgs`)

Variables

- unsigned int `PPL_COMPLEXITY_CLASS_POLYNOMIAL`
Code of the worst-case polynomial complexity class.
- unsigned int `PPL_COMPLEXITY_CLASS_SIMPLEX`
Code of the worst-case exponential but typically polynomial complexity class.
- unsigned int `PPL_COMPLEXITY_CLASS_ANY`
Code of the universal complexity class.
- unsigned int `PPL_POLY_CON_RELATION_IS_DISJOINT`
Individual bit saying that the polyhedron and the set of points satisfying the constraint are disjoint.
- unsigned int `PPL_POLY_CON_RELATION_STRICTLY_INTERSECTS`
Individual bit saying that the polyhedron intersects the set of points satisfying the constraint, but it is not included in it.
- unsigned int `PPL_POLY_CON_RELATION_IS_INCLUDED`
Individual bit saying that the polyhedron is included in the set of points satisfying the constraint.
- unsigned int `PPL_POLY_CON_RELATION_SATURATES`
Individual bit saying that the polyhedron is included in the set of points saturating the constraint.
- unsigned int `PPL_POLY_GEN_RELATION_SUBSUMES`
Individual bit saying that adding the generator would not change the polyhedron.

11.4.1 Define Documentation

11.4.1.1 `#define PPL_DECLARE_AND_DOCUMENT_ASCII_DUMP_LOAD_FUNCTIONS(Type)`

Definition at line 837 of file `ppl_c.h`.

11.4.1.2 `#define PPL_DECLARE_AND_DOCUMENT_IO_FUNCTIONS(Type)`

Value:

```

PPL_DECLARE_AND_DOCUMENT_PRINT_FUNCTIONS (Type)          \
PPL_DECLARE_AND_DOCUMENT_ASCII_DUMP_LOAD_FUNCTIONS (Type) \

```

Definition at line 847 of file `ppl_c.h`.

11.4.1.3 #define PPL_DECLARE_AND_DOCUMENT_PRINT_FUNCTIONS(Type)

Definition at line 825 of file ppl_c.h.

11.4.1.4 #define PPL_DECLARE_ASCII_DUMP_LOAD_FUNCTIONS(Type)

Definition at line 811 of file ppl_c.h.

11.4.1.5 #define PPL_DECLARE_IO_FUNCTIONS(Type)

Value:

```
PPL_DECLARE_PRINT_FUNCTIONS (Type)          \
PPL_DECLARE_ASCII_DUMP_LOAD_FUNCTIONS (Type)
```

Definition at line 821 of file ppl_c.h.

11.4.1.6 #define PPL_DECLARE_PRINT_FUNCTIONS(Type)

Definition at line 800 of file ppl_c.h.

11.4.1.7 #define PPL_PROTO(protos) ()

Definition at line 162 of file ppl_c.h.

11.4.1.8 #define PPL_TYPE_DECLARATION(Type)

Value:

```
typedef struct ppl_##Type##_tag* ppl_##Type##_t;          \
typedef struct ppl_##Type##_tag const* ppl_const_##Type##_t;
```

Definition at line 582 of file ppl_c.h.

11.4.2 Function Documentation**11.4.2.1 int ppl_new_Generator_System_zero_dim_univ (ppl_Generator_System_t * pgs)**

Definition at line 1097 of file ppl_c_implementation_common.cc.

References Parma_Polyhedra_Library::Interfaces::C::to_nonconst().

11.4.2.2 int ppl_new_Grid_Generator_System_zero_dim_univ (ppl_Grid_Generator_System_t * pgs)

Definition at line 1690 of file ppl_c_implementation_common.cc.

References Parma_Polyhedra_Library::Interfaces::C::to_nonconst().

11.5 ppl_c_implementation_common.cc File Reference

Typedefs

- typedef const char * [Parma_Polyhedra_Library::Interfaces::C::c_variable_output_function_type](#) ([ppl_dimension_type](#) var)

Functions

- `const char * Parma_Polyhedra_Library::Interfaces::C::c_variable_default_output_function (ppl_dimension_type var)`
- `void Parma_Polyhedra_Library::Interfaces::C::cxx_Variable_output_function (std::ostream &s, const Variable &v)`
- `void Parma_Polyhedra_Library::Interfaces::C::notify_error (enum ppl_enum_error_code code, const char *description)`
- `void Parma_Polyhedra_Library::Interfaces::C::reset_timeout ()`
- `void Parma_Polyhedra_Library::Interfaces::C::reset_deterministic_timeout ()`
- `int ppl_set_error_handler (error_handler_type h)`
- `int ppl_initialize (void)`

Initializes the Parma Polyhedra Library. This function must be called before any other function.

- `catch (const std::invalid_argument &e)`
- `catch (const std::domain_error &e)`
- `catch (const std::length_error &e)`
- `catch (const std::logic_error &e)`
- `catch (const std::overflow_error &e)`
- `catch (const std::runtime_error &e)`
- `catch (const std::exception &e)`
- `catch (timeout_exception &)`
- `catch (deterministic_timeout_exception &)`
- `catch (...)`
- `int ppl_finalize (void)`

Finalizes the Parma Polyhedra Library. This function must be called after any other function.

- `int ppl_set_timeout (unsigned time)`

Sets the timeout for computations whose completion could require an exponential amount of time.

- `int ppl_reset_timeout (void)`

Resets the timeout time so that the computation is not interrupted.

- `int ppl_set_deterministic_timeout (unsigned weight)`

Sets a threshold for computations whose completion could require an exponential amount of time.

- `int ppl_reset_deterministic_timeout (void)`

Resets the deterministic timeout so that the computation is not interrupted.

- `int ppl_set_rounding_for_PPL (void)`

Sets the FPU rounding mode so that the PPL abstractions based on floating point numbers work correctly.

- `int ppl_restore_pre_PPL_rounding (void)`

Sets the FPU rounding mode as it was before initialization of the PPL.

- `int ppl_irrational_precision (unsigned *p)`

*Writes to *p* the precision parameter used for irrational calculations.*

- `int ppl_set_irrational_precision (unsigned p)`

Sets the precision parameter used for irrational calculations.

- `int ppl_version_major (void)`
Returns the major number of the PPL version.
- `int ppl_version_minor (void)`
Returns the minor number of the PPL version.
- `int ppl_version_revision (void)`
Returns the revision number of the PPL version.
- `int ppl_version_beta (void)`
Returns the beta number of the PPL version.
- `int ppl_version (const char **p)`
*Writes to *p a pointer to a character string containing the PPL version.*
- `int ppl_banner (const char **p)`
*Writes to *p a pointer to a character string containing the PPL banner.*
- `int ppl_max_space_dimension (ppl_dimension_type *m)`
Writes to m the maximum space dimension this library can handle.
- `int ppl_not_a_dimension (ppl_dimension_type *m)`
Writes to m a value that does not designate a valid dimension.
- `int ppl_new_Coefficient (ppl_Coefficient_t *pc)`
- `int ppl_new_Coefficient_from_mpz_t (ppl_Coefficient_t *pc, mpz_t z)`
- `int ppl_new_Coefficient_from_Coefficient (ppl_Coefficient_t *pc, ppl_const_Coefficient_t c)`
- `int ppl_Coefficient_to_mpz_t (ppl_const_Coefficient_t c, mpz_t z)`
- `int ppl_delete_Coefficient (ppl_const_Coefficient_t c)`
- `int ppl_assign_Coefficient_from_mpz_t (ppl_Coefficient_t dst, mpz_t z)`
- `int ppl_assign_Coefficient_from_Coefficient (ppl_Coefficient_t dst, ppl_const_Coefficient_t src)`
- `int ppl_Coefficient_OK (ppl_const_Coefficient_t)`
- `int ppl_Coefficient_is_bounded (void)`
- `int ppl_Coefficient_min (mpz_t min)`
- `int ppl_Coefficient_max (mpz_t max)`
- `int ppl_new_Linear_Expression (ppl_Linear_Expression_t *ple)`
- `int ppl_new_Linear_Expression_with_dimension (ppl_Linear_Expression_t *ple, ppl_dimension_type d)`
- `int ppl_new_Linear_Expression_from_Linear_Expression (ppl_Linear_Expression_t *ple, ppl_const_Linear_Expression_t le)`
- `int ppl_delete_Linear_Expression (ppl_const_Linear_Expression_t le)`
- `int ppl_assign_Linear_Expression_from_Linear_Expression (ppl_Linear_Expression_t dst, ppl_const_Linear_Expression_t src)`

- int [ppl_io_print_variable](#) ([ppl_dimension_type](#) var)

Pretty-prints var to stdout.

- int [ppl_io_fprint_variable](#) (FILE *stream, [ppl_dimension_type](#) var)

Pretty-prints var to the given output stream.

- int [ppl_io_asprint_variable](#) (char **strp, [ppl_dimension_type](#) var)

Pretty-prints var to a malloc-allocated string, a pointer to which is returned via strp.

- char * [ppl_io_wrap_string](#) (const char *src, unsigned indent_depth, unsigned preferred_first_line_length, unsigned preferred_line_length)

Utility function for the wrapping of lines of text.

- int [ppl_io_set_variable_output_function](#) ([ppl_io_variable_output_function_type](#) *p)

Sets the output function to be used for printing variables to p.

- int [ppl_io_get_variable_output_function](#) ([ppl_io_variable_output_function_type](#) **pp)

Writes a pointer to the current variable output function to pp.

Variables

- `error_handler_type Parma_Polyhedra_Library::Interfaces::C::user_error_handler = 0`
- `ppl_io_variable_output_function_type * Parma_Polyhedra_Library::Interfaces::C::c_variable_output_function`
- `Variable::output_function_type * Parma_Polyhedra_Library::Interfaces::C::saved_cxx_Variable_output_function`
- unsigned int `PPL_POLY_CON_RELATION_IS_DISJOINT`
Individual bit saying that the polyhedron and the set of points satisfying the constraint are disjoint.
- unsigned int `PPL_POLY_CON_RELATION_STRICTLY_INTERSECTS`
Individual bit saying that the polyhedron intersects the set of points satisfying the constraint, but it is not included in it.
- unsigned int `PPL_POLY_CON_RELATION_IS_INCLUDED`
Individual bit saying that the polyhedron is included in the set of points satisfying the constraint.
- unsigned int `PPL_POLY_CON_RELATION_SATURATES`
Individual bit saying that the polyhedron is included in the set of points saturating the constraint.
- unsigned int `PPL_POLY_GEN_RELATION_SUBSUMES`
Individual bit saying that adding the generator would not change the polyhedron.
- unsigned int `PPL_COMPLEXITY_CLASS_POLYNOMIAL`
Code of the worst-case polynomial complexity class.
- unsigned int `PPL_COMPLEXITY_CLASS_SIMPLEX`
Code of the worst-case exponential but typically polynomial complexity class.
- unsigned int `PPL_COMPLEXITY_CLASS_ANY`
Code of the universal complexity class.
- int `PPL_MIP_PROBLEM_STATUS_UNFEASIBLE`
- int `PPL_MIP_PROBLEM_STATUS_UNBOUNDED`
- int `PPL_MIP_PROBLEM_STATUS_OPTIMIZED`
