7.79 ppl_Pointset_Powerset_C_Polyhedron_const_iterator_tag Interface Reference

Types and functions for iterating on the disjuncts of a const ppl_Pointset_Powerset_C_Polyhedron_tag.

`#include <ppl_c.h>`

Related Functions

(Note that these are not member functions.)

Construction, Initialization and Destruction

- int ppl_new_Pointset_Powerset_C_Polyhedron_const_iterator (ppl_Pointset_Powerset_C_Polyhedron_const_iterator_t *pit)
  Builds a new 'const iterator' and writes a handle to it at address `pit`.
- int ppl_new_Pointset_Powerset_C_Polyhedron_const_iterator_from_const_iterator (ppl_Pointset_Powerset_C_Polyhedron_const_iterator_t *pit, ppl_const_Pointset_Powerset_C_Polyhedron_const_iterator_t y)
  Builds a copy of `y` *and writes a handle to it at address* `pit`.
- int ppl_Pointset_Powerset_C_Polyhedron_const_iterator_begin (ppl_const_Pointset_Powerset_C_Polyhedron_t ps, ppl_Pointset_Powerset_C_Polyhedron_const_iterator_t psit)
  Assigns to `psit` *a const iterator "pointing" to the beginning of the sequence of disjuncts of* `ps`.
- int ppl_Pointset_Powerset_C_Polyhedron_const_iterator_end (ppl_const_Pointset_Powerset_C_Polyhedron_t ps, ppl_Pointset_Powerset_C_Polyhedron_const_iterator_t psit)
  Assigns to `psit` *a const iterator "pointing" past the end of the sequence of disjuncts of* `ps`.
- int ppl_delete_Pointset_Powerset_C_Polyhedron_const_iterator (ppl_const_Pointset_Powerset_C_Polyhedron_const_iterator_t it)
  Invalidates the handle `it`*: this makes sure the corresponding resources will eventually be released.*

Dereferencing, Increment, Decrement and Equality Testing

- int ppl_Pointset_Powerset_C_Polyhedron_const_iterator_dereference (ppl_const_Pointset_Powerset_C_Polyhedron_const_iterator_t it, ppl_const_Polyhedron_t *d)

Dereferences `it` *writing a const handle to the resulting disjunct at address* `d`.

- int ppl_Pointset_Powerset_C_Polyhedron_const_iterator_increment (ppl_Pointset_Powerset_C_-Polyhedron_const_iterator_t it)

  Increments `it` *so that it "points" to the next disjunct.*

- int ppl_Pointset_Powerset_C_Polyhedron_const_iterator_decrement (ppl_Pointset_Powerset_-C_Polyhedron_const_iterator_t it)

  Decrements `it` *so that it "points" to the previous disjunct.*

- int ppl_Pointset_Powerset_C_Polyhedron_const_iterator_equal_test (ppl_const_Pointset_-Powerset_C_Polyhedron_const_iterator_t x, ppl_const_Pointset_Powerset_C_Polyhedron_-const_iterator_t y)

  Returns a positive integer if the iterators corresponding to `x` *and* `y` *are equal; returns 0 if they are different.*

7.79.1 Detailed Description

Types and functions for iterating on the disjuncts of a const ppl_Pointset_Powerset_C_Polyhedron_tag.

7.79.2 Friends And Related Function Documentation

7.79.2.1 int ppl_new_Pointset_Powerset_C_Polyhedron_const_iterator (ppl_Pointset_Powerset_C_Polyhedron_const_iterator_t * *pit*) [related]

Builds a new 'const iterator' and writes a handle to it at address `pit`.

7.79.2.2 int ppl_new_Pointset_Powerset_C_Polyhedron_const_iterator_from_-const_iterator (ppl_Pointset_Powerset_C_Polyhedron_const_iterator_t * *pit*, ppl_const_Pointset_Powerset_C_Polyhedron_const_iterator_t *y*) [related]

Builds a copy of `y` and writes a handle to it at address `pit`.

7.79.2.3 int ppl_Pointset_Powerset_C_Polyhedron_const_iterator_begin (ppl_const_Pointset_-Powerset_C_Polyhedron_t *ps*, ppl_Pointset_Powerset_C_Polyhedron_const_iterator_t *psit*) [related]

Assigns to `psit` a const iterator "pointing" to the beginning of the sequence of disjuncts of `ps`.

7.79.2.4 int ppl_Pointset_Powerset_C_Polyhedron_const_iterator_end (ppl_const_Pointset_-Powerset_C_Polyhedron_t *ps*, ppl_Pointset_Powerset_C_Polyhedron_const_iterator_t *psit*) [related]

Assigns to `psit` a const iterator "pointing" past the end of the sequence of disjuncts of `ps`.

7.79.2.5 int ppl_delete_Pointset_Powerset_C_Polyhedron_const_iterator (ppl_const_Pointset_Powerset_C_Polyhedron_const_iterator_t *it*) [related]

Invalidates the handle `it`: this makes sure the corresponding resources will eventually be released.

7.79.2.6 int ppl_Pointset_Powerset_C_Polyhedron_const_iterator_dereference (ppl_const_Pointset_Powerset_C_Polyhedron_const_iterator_t *it*, ppl_const_Polyhedron_t * *d*) [related]

Dereferences `it` writing a const handle to the resulting disjunct at address `d`.

Warning

On exit, the disjunct `d` is still owned by the powerset object: any function call on the owning powerset object may invalidate it. Moreover, `d` should **not** be deleted directly: its resources will be released when deleting the owning powerset.

7.79.2.7 int ppl_Pointset_Powerset_C_Polyhedron_const_iterator_increment (ppl_Pointset_Powerset_C_Polyhedron_const_iterator_t *it*) [related]

Increments `it` so that it "points" to the next disjunct.

7.79.2.8 int ppl_Pointset_Powerset_C_Polyhedron_const_iterator_decrement (ppl_Pointset_Powerset_C_Polyhedron_const_iterator_t *it*) [related]

Decrements `it` so that it "points" to the previous disjunct.

7.79.2.9 int ppl_Pointset_Powerset_C_Polyhedron_const_iterator_equal_test (ppl_const_Pointset_Powerset_C_Polyhedron_const_iterator_t *x*, ppl_const_Pointset_Powerset_C_Polyhedron_const_iterator_t *y*) [related]

Returns a positive integer if the iterators corresponding to `x` and `y` are equal; returns 0 if they are different.

  Assigns to `psit` *an iterator "pointing" past the end of the sequence of disjuncts of* `ps`.

- int ppl_delete_Pointset_Powerset_C_Polyhedron_iterator (ppl_const_Pointset_Powerset_C_Polyhedron_iterator_t it)

  Invalidates the handle `it`*: this makes sure the corresponding resources will eventually be released.*

Dereferencing, Increment, Decrement and Equality Testing

- int ppl_Pointset_Powerset_C_Polyhedron_iterator_dereference (ppl_const_Pointset_Powerset_C_Polyhedron_iterator_t it, ppl_const_Polyhedron_t *d)

  Dereferences `it` *writing a const handle to the resulting disjunct at address* `d`.

- int ppl_Pointset_Powerset_C_Polyhedron_iterator_increment (ppl_Pointset_Powerset_C_Polyhedron_iterator_t it)

  Increments `it` *so that it "points" to the next disjunct.*

- int ppl_Pointset_Powerset_C_Polyhedron_iterator_decrement (ppl_Pointset_Powerset_C_Polyhedron_iterator_t it)

  Decrements `it` *so that it "points" to the previous disjunct.*

- int ppl_Pointset_Powerset_C_Polyhedron_iterator_equal_test (ppl_const_Pointset_Powerset_C_Polyhedron_iterator_t x, ppl_const_Pointset_Powerset_C_Polyhedron_iterator_t y)

  Returns a positive integer if the iterators corresponding to `x` *and* `y` *are equal; returns 0 if they are different.*

7.80.1 Detailed Description

Types and functions for iterating on the disjuncts of a ppl_Pointset_Powerset_C_Polyhedron_tag.

7.80.2 Friends And Related Function Documentation

7.80.2.1 int ppl_new_Pointset_Powerset_C_Polyhedron_iterator (ppl_Pointset_Powerset_C_-Polyhedron_iterator_t * *pit*) [related]

Builds a new 'iterator' and writes a handle to it at address `pit`.

7.80.2.2 int ppl_new_Pointset_Powerset_C_Polyhedron_iterator_from_-iterator (ppl_Pointset_Powerset_C_Polyhedron_iterator_t * *pit*, ppl_const_Pointset_Powerset_C_Polyhedron_iterator_t *y*) [related]

Builds a copy of `y` and writes a handle to it at address `pit`.

7.80.2.3 int ppl_Pointset_Powerset_C_Polyhedron_iterator_begin (ppl_Pointset_Powerset_-C_Polyhedron_t *ps*, ppl_Pointset_Powerset_C_Polyhedron_iterator_t *psit*) [related]

Assigns to `psit` an iterator "pointing" to the beginning of the sequence of disjuncts of `ps`.

7.80.2.4 int ppl_Pointset_Powerset_C_Polyhedron_iterator_end (ppl_Pointset_Powerset_-C_Polyhedron_t *ps*, ppl_Pointset_Powerset_C_Polyhedron_iterator_t *psit*) [related]

Assigns to `psit` an iterator "pointing" past the end of the sequence of disjuncts of `ps`.

7.80.2.5 int ppl_delete_Pointset_Powerset_C_Polyhedron_iterator (ppl_const_Pointset_-Powerset_C_Polyhedron_iterator_t *it*) [related]

Invalidates the handle `it`: this makes sure the corresponding resources will eventually be released.

7.80.2.6 int ppl_Pointset_Powerset_C_Polyhedron_iterator_dereference (ppl_const_-Pointset_Powerset_C_Polyhedron_iterator_t *it*, ppl_const_Polyhedron_t * *d*) [related]

Dereferences `it` writing a const handle to the resulting disjunct at address `d`.

Note

Even though `it` is an non-const iterator, dereferencing it results in a handle to a **const** disjunct. This is because mutable iterators are meant to allow for the modification of the sequence of disjuncts (e.g., by dropping elements), while preventing direct modifications of the disjuncts they point to.

Warning

On exit, the disjunct `d` is still owned by the powerset object: any function call on the owning powerset object may invalidate it. Moreover, `d` should **not** be deleted directly: its resources will be released when deleting the owning powerset.

7.80.2.7 int ppl_Pointset_Powerset_C_Polyhedron_iterator_increment (ppl_Pointset_Powerset_C_Polyhedron_iterator_t *it*) [related]

Increments `it` so that it "points" to the next disjunct.

7.80.2.8 int ppl_Pointset_Powerset_C_Polyhedron_iterator_decrement (ppl_Pointset_Powerset_C_Polyhedron_iterator_t *it*) [related]

Decrements `it` so that it "points" to the previous disjunct.

7.80.2.9 int ppl_Pointset_Powerset_C_Polyhedron_iterator_equal_test (ppl_const_Pointset_Powerset_C_Polyhedron_iterator_t *x*, ppl_const_Pointset_Powerset_C_Polyhedron_iterator_t *y*) [related]

Returns a positive integer if the iterators corresponding to `x` and `y` are equal; returns 0 if they are different.

The documentation for this interface was generated from the following files:

- ppl_c.h
- C_interface.dox

7.81 ppl_Pointset_Powerset_C_Polyhedron_tag Interface Reference

Types and functions for the Pointset_Powerset of C_Polyhedron objects.

Ad Hoc Functions for Pointset_Powerset domains

- int ppl_Pointset_Powerset_C_Polyhedron_omega_reduce (ppl_const_Pointset_Powerset_C_Polyhedron_t ps)

  Drops from the sequence of disjuncts in `ps` all the non-maximal elements so that `ps` is non-redundant.

- int ppl_Pointset_Powerset_C_Polyhedron_size (ppl_const_Pointset_Powerset_C_Polyhedron_t ps, size_t *sz)

  Writes to `sz` the number of disjuncts in `ps`.

- int ppl_Pointset_Powerset_C_Polyhedron_geometrically_covers_Pointset_Powerset_C_Polyhedron (ppl_const_Pointset_Powerset_C_Polyhedron_t x, ppl_const_Pointset_Powerset_C_Polyhedron_t y)

  Returns a positive integer if powerset `x` geometrically covers powerset `y`; returns 0 otherwise.

- int ppl_Pointset_Powerset_C_Polyhedron_geometrically_equals_Pointset_Powerset_C_Polyhedron (ppl_const_Pointset_Powerset_C_Polyhedron_t x, ppl_const_Pointset_Powerset_C_Polyhedron_t y)

  Returns a positive integer if powerset `x` is geometrically equal to powerset `y`; returns 0 otherwise.

- int ppl_Pointset_Powerset_C_Polyhedron_add_disjunct (ppl_Pointset_Powerset_C_Polyhedron_t ps, ppl_const_Polyhedron_t d)

  Adds to `ps` a copy of disjunct `d`.

- int ppl_Pointset_Powerset_C_Polyhedron_drop_disjunct (ppl_Pointset_Powerset_C_Polyhedron_t ps, ppl_const_Pointset_Powerset_C_Polyhedron_iterator_t cit, ppl_Pointset_Powerset_C_Polyhedron_iterator_t it)

  Drops from `ps` the disjunct pointed to by `cit`, assigning to `it` an iterator to the disjunct following `cit`.

- int ppl_Pointset_Powerset_C_Polyhedron_drop_disjuncts (ppl_Pointset_Powerset_C_Polyhedron_t ps, ppl_const_Pointset_Powerset_C_Polyhedron_iterator_t first, ppl_const_Pointset_Powerset_C_Polyhedron_iterator_t last)

  Drops from `ps` all the disjuncts from `first` to `last` (excluded).

- int ppl_Pointset_Powerset_C_Polyhedron_pairwise_reduce (ppl_Pointset_Powerset_C_Polyhedron_t ps)

  Modifies `ps` by (recursively) merging together the pairs of disjuncts whose upper-bound is the same as their set-theoretical union.

7.81.1 Detailed Description

Types and functions for the Pointset_Powerset of C_Polyhedron objects. Types and functions for ppl_Pointset_Powerset_C_Polyhedron_tag.

The powerset domains can be instantiated by taking as a base domain any fixed semantic geometric description (C and NNC polyhedra, BD and octagonal shapes, boxes and grids). An element of the powerset

domain represents a disjunctive collection of base objects (its disjuncts), all having the same space dimension.

Besides the functions that are available in all semantic geometric descriptions (whose documentation is not repeated here), the powerset domain also provides several ad hoc functions. In particular, the iterator types allow for the examination and manipulation of the collection of disjuncts.

7.81.2 Friends And Related Function Documentation

7.81.2.1 int ppl_Pointset_Powerset_C_Polyhedron_size (ppl_const_Pointset_Powerset_C_Polyhedron_t *ps*, size_t * *sz*) [related]

Writes to `sz` the number of disjuncts in `ps`.

Note

If present, Omega-redundant elements will be counted too.

7.81.2.2 int ppl_Pointset_Powerset_C_Polyhedron_geometrically_covers_Pointset_Powerset_C_Polyhedron (ppl_const_Pointset_Powerset_C_Polyhedron_t *x*, ppl_const_Pointset_Powerset_C_Polyhedron_t *y*) [related]

Returns a positive integer if powerset `x` geometrically covers powerset `y`; returns 0 otherwise.

7.81.2.3 int ppl_Pointset_Powerset_C_Polyhedron_geometrically_equals_Pointset_Powerset_C_Polyhedron (ppl_const_Pointset_Powerset_C_Polyhedron_t *x*, ppl_const_Pointset_Powerset_C_Polyhedron_t *y*) [related]

Returns a positive integer if powerset `x` is geometrically equal to powerset `y`; returns 0 otherwise.

7.81.2.4 int ppl_Pointset_Powerset_C_Polyhedron_add_disjunct (ppl_Pointset_Powerset_C_Polyhedron_t *ps*, ppl_const_Polyhedron_t *d*) [related]

Adds to `ps` a copy of disjunct `d`.

7.81.2.5 int ppl_Pointset_Powerset_C_Polyhedron_drop_disjunct (ppl_Pointset_Powerset_C_Polyhedron_t *ps*, ppl_const_Pointset_Powerset_C_Polyhedron_iterator_t *cit*, ppl_Pointset_Powerset_C_Polyhedron_iterator_t *it*) [related]

Drops from `ps` the disjunct pointed to by `cit`, assigning to `it` an iterator to the disjunct following `cit`.

7.81.2.6 int ppl_Pointset_Powerset_C_Polyhedron_drop_disjuncts (ppl_Pointset_Powerset_C_Polyhedron_t *ps*, ppl_const_Pointset_Powerset_C_Polyhedron_iterator_t *first*, ppl_const_Pointset_Powerset_C_Polyhedron_iterator_t *last*) [related]

Drops from `ps` all the disjuncts from `first` to `last` (excluded).

7.81.2.7 int ppl_Pointset_Powerset_C_Polyhedron_pairwise_reduce (ppl_Pointset_Powerset_C_Polyhedron_t *ps*) [related]

Modifies `ps` by (recursively) merging together the pairs of disjuncts whose upper-bound is the same as their set-theoretical union.

7.81.2.8 int ppl_delete_Pointset_Powerset_C_Polyhedron (ppl_const_Pointset_Powerset_C_Polyhedron_t *ph*) [related]

- int ppl_termination_test_MS_NNC_Polyhedron_2 (ppl_const_Polyhedron_t pset_before, ppl_const_Polyhedron_t pset_after)
- int ppl_termination_test_PR_NNC_Polyhedron_2 (ppl_const_Polyhedron_t pset_before, ppl_const_Polyhedron_t pset_after)
- int ppl_one_affine_ranking_function_MS_C_Polyhedron_2 (ppl_const_Polyhedron_t pset_before, ppl_const_Polyhedron_t pset_after, ppl_Generator_t point)
- int ppl_one_affine_ranking_function_PR_C_Polyhedron_2 (ppl_const_Polyhedron_t pset_before, ppl_const_Polyhedron_t pset_after, ppl_Generator_t point)
- int ppl_one_affine_ranking_function_MS_NNC_Polyhedron_2 (ppl_const_Polyhedron_t pset_before, ppl_const_Polyhedron_t pset_after, ppl_Generator_t point)

- int ppl_one_affine_ranking_function_PR_NNC_Polyhedron_2 (ppl_const_Polyhedron_t pset_before, ppl_const_Polyhedron_t pset_after, ppl_Generator_t point)
- int ppl_all_affine_ranking_functions_MS_C_Polyhedron_2 (ppl_const_Polyhedron_t pset_before, ppl_const_Polyhedron_t pset_after, ppl_Polyhedron_t ph)
- int ppl_all_affine_ranking_functions_PR_C_Polyhedron_2 (ppl_const_Polyhedron_t pset_before, ppl_const_Polyhedron_t pset_after, ppl_Polyhedron_t ph)
- int ppl_all_affine_ranking_functions_MS_NNC_Polyhedron_2 (ppl_const_Polyhedron_t pset_before, ppl_const_Polyhedron_t pset_after, ppl_Polyhedron_t ph)
- int ppl_all_affine_ranking_functions_PR_NNC_Polyhedron_2 (ppl_const_Polyhedron_t pset_before, ppl_const_Polyhedron_t pset_after, ppl_Polyhedron_t ph)

Constructors and Assignment for C_Polyhedron

- int ppl_new_C_Polyhedron_from_space_dimension (ppl_Polyhedron_t *pph, ppl_dimension_type d, int empty)

  Builds a C polyhedron of dimension `d` and writes an handle to it at address `pph`. If `empty` is different from zero, the newly created polyhedron will be empty; otherwise, it will be a universe polyhedron.

- int ppl_new_C_Polyhedron_from_C_Polyhedron (ppl_Polyhedron_t *pph, ppl_const_Polyhedron_t ph)

  Builds a C polyhedron that is a copy of `ph`; writes a handle for the newly created polyhedron at address `pph`.

- int ppl_new_C_Polyhedron_from_C_Polyhedron_with_complexity (ppl_Polyhedron_t *pph, ppl_const_Polyhedron_t ph, int complexity)

  Builds a C polyhedron that is a copy of `ph`; writes a handle for the newly created polyhedron at address `pph`.

- int ppl_new_C_Polyhedron_from_Constraint_System (ppl_Polyhedron_t *pph, ppl_const_Constraint_System_t cs)

  Builds a new C polyhedron from the system of constraints `cs` and writes a handle for the newly created polyhedron at address `pph`.

- int ppl_new_C_Polyhedron_recycle_Constraint_System (ppl_Polyhedron_t *pph, ppl_Constraint_System_t cs)

  Builds a new C polyhedron recycling the system of constraints `cs` and writes a handle for the newly created polyhedron at address `pph`.

- int ppl_new_C_Polyhedron_from_Congruence_System (ppl_Polyhedron_t *pph, ppl_const_Congruence_System_t cs)

  Builds a new C polyhedron from the system of congruences `cs` and writes a handle for the newly created polyhedron at address `pph`.

- int ppl_new_C_Polyhedron_recycle_Congruence_System (ppl_Polyhedron_t *pph, ppl_Congruence_System_t cs)

  Builds a new C polyhedron recycling the system of congruences `cs` and writes a handle for the newly created polyhedron at address `pph`.

- int ppl_assign_C_Polyhedron_from_C_Polyhedron (ppl_Polyhedron_t dst, ppl_const_Polyhedron_t src)

  Assigns a copy of the C polyhedron `src` to the C polyhedron `dst`.

Constructors and Assignment for NNC_Polyhedron

- int ppl_new_NNC_Polyhedron_from_space_dimension (ppl_Polyhedron_t *pph, ppl_dimension_type d, int empty)

  Builds an NNC polyhedron of dimension `d` *and writes an handle to it at address* `pph`*. If* `empty` *is different from zero, the newly created polyhedron will be empty; otherwise, it will be a universe polyhedron.*

- int ppl_new_NNC_Polyhedron_from_NNC_Polyhedron (ppl_Polyhedron_t *pph, ppl_const_Polyhedron_t ph)

  Builds an NNC polyhedron that is a copy of `ph`*; writes a handle for the newly created polyhedron at address* `pph`*.*

- int ppl_new_NNC_Polyhedron_from_NNC_Polyhedron_with_complexity (ppl_Polyhedron_t *pph, ppl_const_Polyhedron_t ph, int complexity)

  Builds an NNC polyhedron that is a copy of `ph`*; writes a handle for the newly created polyhedron at address* `pph`*.*

- int ppl_new_NNC_Polyhedron_from_Constraint_System (ppl_Polyhedron_t *pph, ppl_const_Constraint_System_t cs)

  Builds a new NNC polyhedron from the system of constraints `cs` *and writes a handle for the newly created polyhedron at address* `pph`*.*

- int ppl_new_NNC_Polyhedron_recycle_Constraint_System (ppl_Polyhedron_t *pph, ppl_Constraint_System_t cs)

  Builds a new NNC polyhedron recycling the system of constraints `cs` *and writes a handle for the newly created polyhedron at address* `pph`*.*

- int ppl_new_NNC_Polyhedron_from_Congruence_System (ppl_Polyhedron_t *pph, ppl_const_Congruence_System_t cs)

  Builds a new NNC polyhedron from the system of congruences `cs` *and writes a handle for the newly created polyhedron at address* `pph`*.*

- int ppl_new_NNC_Polyhedron_recycle_Congruence_System (ppl_Polyhedron_t *pph, ppl_Congruence_System_t cs)

  Builds a new NNC polyhedron recycling the system of congruences `cs` *and writes a handle for the newly created polyhedron at address* `pph`*.*

- int ppl_assign_NNC_Polyhedron_from_NNC_Polyhedron (ppl_Polyhedron_t dst, ppl_const_Polyhedron_t src)

  Assigns a copy of the NNC polyhedron `src` *to the NNC polyhedron* `dst`*.*

Constructors Behaving as Conversion Operators

Besides the conversions listed here below, the library also provides conversion operators that build a semantic geometric description starting from ***any*** *other semantic geometric description (e.g., ppl_new_Grid_from_C_Polyhedron, ppl_new_C_Polyhedron_from_BD_Shape_mpq_class, etc.). Clearly, the conversion operators are only available if both the source and the target semantic geometric descriptions have been enabled when configuring the library. The conversions also taking as argument a complexity class sometimes provide non-trivial precision/efficiency trade-offs.*

- int ppl_new_C_Polyhedron_from_NNC_Polyhedron (ppl_Polyhedron_t *pph, ppl_const_Polyhedron_t ph)

  Builds a C polyhedron that is a copy of the topological closure of the NNC polyhedron `ph`*; writes a handle for the newly created polyhedron at address* `pph`*.*

- int ppl_new_C_Polyhedron_from_NNC_Polyhedron_with_complexity (ppl_Polyhedron_t *pph, ppl_const_Polyhedron_t ph, int complexity)

Builds a C polyhedron that approximates NNC_Polyhedron `ph`*, using an algorithm whose complexity does not exceed* `complexity`*; writes a handle for the newly created polyhedron at address* `pph`*.*

- int ppl_new_NNC_Polyhedron_from_C_Polyhedron (ppl_Polyhedron_t *pph, ppl_const_Polyhedron_t ph)

  Builds an NNC polyhedron that is a copy of the C polyhedron `ph`*; writes a handle for the newly created polyhedron at address* `pph`*.*

- int ppl_new_NNC_Polyhedron_from_C_Polyhedron_with_complexity (ppl_Polyhedron_t *pph, ppl_const_Polyhedron_t ph, int complexity)

  Builds an NNC polyhedron that approximates C_Polyhedron `ph`*, using an algorithm whose complexity does not exceed* `complexity`*; writes a handle for the newly created polyhedron at address* `pph`*.*

Destructor for (C or NNC) Polyhedra

- int ppl_delete_Polyhedron (ppl_const_Polyhedron_t ph)

  Invalidates the handle `ph`*: this makes sure the corresponding resources will eventually be released.*

Functions that Do Not Modify the Polyhedron

- int ppl_Polyhedron_space_dimension (ppl_const_Polyhedron_t ph, ppl_dimension_type *m)

  Writes to `m` *the dimension of the vector space enclosing* `ph`*.*

- int ppl_Polyhedron_affine_dimension (ppl_const_Polyhedron_t ph, ppl_dimension_type *m)

  Writes to `m` *the affine dimension of* `ph` *(not to be confused with the dimension of its enclosing vector space) or 0, if* `ph` *is empty.*

- int ppl_Polyhedron_relation_with_Constraint (ppl_const_Polyhedron_t ph, ppl_const_Constraint_t c)

  Checks the relation between the polyhedron `ph` *and the constraint* `c`*.*

- int ppl_Polyhedron_relation_with_Generator (ppl_const_Polyhedron_t ph, ppl_const_Generator_t g)

  Checks the relation between the polyhedron `ph` *and the generator* `g`*.*

- int ppl_Polyhedron_get_constraints (ppl_const_Polyhedron_t ph, ppl_const_Constraint_System_t *pcs)

  Writes a const handle to the constraint system defining the polyhedron `ph` *at address* `pcs`*.*

- int ppl_Polyhedron_get_congruences (ppl_const_Polyhedron_t ph, ppl_const_Congruence_System_t *pcs)

  Writes at address `pcs` *a const handle to a system of congruences approximating the polyhedron* `ph`*.*

- int ppl_Polyhedron_get_minimized_constraints (ppl_const_Polyhedron_t ph, ppl_const_Constraint_System_t *pcs)

  Writes a const handle to the minimized constraint system defining the polyhedron `ph` *at address* `pcs`*.*

- int ppl_Polyhedron_get_minimized_congruences (ppl_const_Polyhedron_t ph, ppl_const_Congruence_System_t *pcs)

  Writes at address `pcs` *a const handle to a system of minimized congruences approximating the polyhedron* `ph`*.*

- int ppl_Polyhedron_is_empty (ppl_const_Polyhedron_t ph)

Returns a positive integer if `ph` *is empty; returns 0 if* `ph` *is not empty.*

- int ppl_Polyhedron_is_universe (ppl_const_Polyhedron_t ph)
  Returns a positive integer if `ph` *is a universe polyhedron; returns 0 if it is not.*

- int ppl_Polyhedron_is_bounded (ppl_const_Polyhedron_t ph)
  Returns a positive integer if `ph` *is bounded; returns 0 if* `ph` *is unbounded.*

- int ppl_Polyhedron_contains_integer_point (ppl_const_Polyhedron_t ph)
  Returns a positive integer if `ph` *contains at least one integer point; returns 0 otherwise.*

- int ppl_Polyhedron_is_topologically_closed (ppl_const_Polyhedron_t ph)
  Returns a positive integer if `ph` *is topologically closed; returns 0 if* `ph` *is not topologically closed.*

- int ppl_Polyhedron_is_discrete (ppl_const_Polyhedron_t ph)
  Returns a positive integer if `ph` *is a discrete set; returns 0 if* `ph` *is not a discrete set.*

- int ppl_Polyhedron_constrains (ppl_Polyhedron_t ph, ppl_dimension_type var)
  Returns a positive integer if `ph` *constrains* `var`*; returns 0 if* `ph` *does not constrain* `var`*.*

- int ppl_Polyhedron_bounds_from_above (ppl_const_Polyhedron_t ph, ppl_const_Linear_Expression_t le)
  Returns a positive integer if `le` *is bounded from above in* `ph`*; returns 0 otherwise.*

- int ppl_Polyhedron_bounds_from_below (ppl_const_Polyhedron_t ph, ppl_const_Linear_Expression_t le)
  Returns a positive integer if `le` *is bounded from below in* `ph`*; returns 0 otherwise.*

- int ppl_Polyhedron_maximize_with_point (ppl_const_Polyhedron_t ph, ppl_const_Linear_Expression_t le, ppl_Coefficient_t sup_n, ppl_Coefficient_t sup_d, int *pmaximum, ppl_Generator_t point)
  Returns a positive integer if `ph` *is not empty and* `le` *is bounded from above in* `ph`*, in which case the supremum value and a point where* `le` *reaches it are computed.*

- int ppl_Polyhedron_maximize (ppl_const_Polyhedron_t ph, ppl_const_Linear_Expression_t le, ppl_Coefficient_t sup_n, ppl_Coefficient_t sup_d, int *pmaximum)
  The same as ppl_Polyhedron_maximize_with_point, but without the output argument for the location where the supremum value is reached.

- int ppl_Polyhedron_minimize_with_point (ppl_const_Polyhedron_t ph, ppl_const_Linear_Expression_t le, ppl_Coefficient_t inf_n, ppl_Coefficient_t inf_d, int *pminimum, ppl_Generator_t point)
  Returns a positive integer if `ph` *is not empty and* `le` *is bounded from below in* `ph`*, in which case the infimum value and a point where* `le` *reaches it are computed.*

- int ppl_Polyhedron_minimize_with_point (ppl_const_Polyhedron_t ph, ppl_const_Linear_Expression_t le, ppl_Coefficient_t inf_n, ppl_Coefficient_t inf_d, int *pminimum)
  The same as ppl_Polyhedron_minimize_with_point, but without the output argument for the location where the infimum value is reached.

- int ppl_Polyhedron_contains_Polyhedron (ppl_const_Polyhedron_t x, ppl_const_Polyhedron_t y)
  Returns a positive integer if `x` *contains or is equal to* `y`*; returns 0 if it does not.*

- int ppl_Polyhedron_strictly_contains_Polyhedron (ppl_const_Polyhedron_t x, ppl_const_Polyhedron_t y)

Returns a positive integer if `x` *strictly contains* `y`*; returns 0 if it does not.*

- int ppl_Polyhedron_is_disjoint_from_Polyhedron (ppl_const_Polyhedron_t x, ppl_const_Polyhedron_t y)
  Returns a positive integer if `x` *and* `y` *are disjoint; returns 0 if they are not.*

- int ppl_Polyhedron_equals_Polyhedron (ppl_const_Polyhedron_t x, ppl_const_Polyhedron_t y)
  Returns a positive integer if `x` *and* `y` *are the same polyhedron; returns 0 if they are different.*

- int ppl_Polyhedron_OK (ppl_const_Polyhedron_t ph)
  Returns a positive integer if `ph` *is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if* `ph` *is broken. Useful for debugging purposes.*

- int ppl_Polyhedron_external_memory_in_bytes (ppl_const_Polyhedron_t ph, size_t *sz)
  Writes to `sz` *a lower bound to the size in bytes of the memory managed by* `ph`*.*

- int ppl_Polyhedron_total_memory_in_bytes (ppl_const_Polyhedron_t ph, size_t *sz)
  Writes to `sz` *a lower bound to the size in bytes of the memory managed by* `ph`*.*

Space Dimension Preserving Functions that May Modify the Polyhedron

- int ppl_Polyhedron_add_constraint (ppl_Polyhedron_t ph, ppl_const_Constraint_t c)
  Adds a copy of the constraint `c` *to the system of constraints of* `ph`*.*

- int ppl_Polyhedron_add_congruence (ppl_Polyhedron_t ph, ppl_const_Congruence_t c)
  Adds a copy of the congruence `c` *to polyhedron of* `ph`*.*

- int ppl_Polyhedron_add_constraints (ppl_Polyhedron_t ph, ppl_const_Constraint_System_t cs)
  Adds a copy of the system of constraints `cs` *to the system of constraints of* `ph`*.*

- int ppl_Polyhedron_add_congruences (ppl_Polyhedron_t ph, ppl_const_Congruence_System_t cs)
  Adds a copy of the system of congruences `cs` *to the polyhedron* `ph`*.*

- int ppl_Polyhedron_add_recycled_constraints (ppl_Polyhedron_t ph, ppl_Constraint_System_t cs)
  Adds the system of constraints `cs` *to the system of constraints of* `ph`*.*

- int ppl_Polyhedron_add_recycled_congruences (ppl_Polyhedron_t ph, ppl_Congruence_System_t cs)
  Adds the system of congruences `cs` *to the polyhedron* `ph`*.*

- int ppl_Polyhedron_refine_with_constraint (ppl_Polyhedron_t ph, ppl_const_Constraint_t c)
  Refines `ph` *using constraint* `c`*.*

- int ppl_Polyhedron_refine_with_congruence (ppl_Polyhedron_t ph, ppl_const_Congruence_t c)
  Refines `ph` *using congruence* `c`*.*

- int ppl_Polyhedron_refine_with_constraints (ppl_Polyhedron_t ph, ppl_const_Constraint_System_t cs)
  Refines `ph` *using the constraints in* `cs`*.*

- int ppl_Polyhedron_refine_with_congruences (ppl_Polyhedron_t ph, ppl_const_Congruence_System_t cs)

Refines `ph` *using the congruences in* `cs`.

- int ppl_Polyhedron_intersection_assign (ppl_Polyhedron_t x, ppl_const_Polyhedron_t y)

  Intersects `x` *with polyhedron* `y` *and assigns the result to* `x`.

- int ppl_Polyhedron_upper_bound_assign (ppl_Polyhedron_t x, ppl_const_Polyhedron_t y)

  Assigns to `x` *an upper bound of* `x` *and* `y`.

- int ppl_Polyhedron_difference_assign (ppl_Polyhedron_t x, ppl_const_Polyhedron_t y)

  Same as ppl_Polyhedron_poly_difference_assign(x, y).

- int ppl_Polyhedron_simplify_using_context_assign (ppl_Polyhedron_t x, ppl_const_Polyhedron_t y)

  Assigns to `x` *the meet-preserving simplification of* `x` *with respect to context* `y`. *Returns a positive integer if* `x` *and* `y` *have a nonempty intersection; returns* `0` *if they are disjoint.*

- int ppl_Polyhedron_time_elapse_assign (ppl_Polyhedron_t x, ppl_const_Polyhedron_t y)

  Assigns to `x` *the time-elapse between the polyhedra* `x` *and* `y`.

- int ppl_Polyhedron_topological_closure_assign (ppl_Polyhedron_t ph)

  Assigns to `ph` *its topological closure.*

- int ppl_Polyhedron_unconstrain_space_dimension (ppl_Polyhedron_t ph, ppl_dimension_type var)

  Modifies `ph` *by unconstraining the space dimension* `var`.

- int ppl_Polyhedron_unconstrain_space_dimensions (ppl_Polyhedron_t ph, ppl_dimension_type ds[ ], size_t n)

  Modifies `ph` *by unconstraining the space dimensions that are specified in the first* `n` *positions of the array* `ds`. *The presence of duplicates in* `ds` *is a waste but an innocuous one.*

- int ppl_Polyhedron_affine_image (ppl_Polyhedron_t ph, ppl_dimension_type var, ppl_const_Linear_Expression_t le, ppl_const_Coefficient_t d)

  Transforms the polyhedron `ph`, *assigning an affine expression to the specified variable.*

- int ppl_Polyhedron_affine_preimage (ppl_Polyhedron_t ph, ppl_dimension_type var, ppl_const_Linear_Expression_t le, ppl_const_Coefficient_t d)

  Transforms the polyhedron `ph`, *substituting an affine expression to the specified variable.*

- int ppl_Polyhedron_bounded_affine_image (ppl_Polyhedron_t ph, ppl_dimension_type var, ppl_const_Linear_Expression_t lb, ppl_const_Linear_Expression_t ub, ppl_const_Coefficient_t d)

  Assigns to `ph` *the image of* `ph` *with respect to the generalized affine transfer relation* $\frac{\mathrm{lb}}{\mathrm{d}} \leq \mathrm{var}' \leq \frac{\mathrm{ub}}{\mathrm{d}}$.

- int ppl_Polyhedron_bounded_affine_preimage (ppl_Polyhedron_t ph, ppl_dimension_type var, ppl_const_Linear_Expression_t lb, ppl_const_Linear_Expression_t ub, ppl_const_Coefficient_t d)

  Assigns to `ph` *the preimage of* `ph` *with respect to the generalized affine transfer relation* $\frac{\mathrm{lb}}{\mathrm{d}} \leq \mathrm{var}' \leq \frac{\mathrm{ub}}{\mathrm{d}}$.

- int ppl_Polyhedron_generalized_affine_image (ppl_Polyhedron_t ph, ppl_dimension_type var, enum ppl_enum_Constraint_Type relsym, ppl_const_Linear_Expression_t le, ppl_const_Coefficient_t d)

  Assigns to `ph` *the image of* `ph` *with respect to the generalized affine transfer relation* $\mathrm{var}' \bowtie \frac{\mathrm{le}}{\mathrm{d}}$, *where* $\bowtie$ *is the relation symbol encoded by* `relsym`.

- int ppl_Polyhedron_generalized_affine_preimage (ppl_Polyhedron_t ph, ppl_dimension_type var, enum ppl_enum_Constraint_Type relsym, ppl_const_Linear_Expression_t le, ppl_const_Coefficient_t d)

  Assigns to `ph` *the preimage of* `ph` *with respect to the generalized affine transfer relation* $\mathrm{var}' \bowtie \frac{\mathrm{le}}{\mathrm{d}}$, *where* $\bowtie$ *is the relation symbol encoded by* `relsym`.

- int ppl_Polyhedron_generalized_affine_image_lhs_rhs (ppl_Polyhedron_t ph, ppl_const_Linear_Expression_t lhs, enum ppl_enum_Constraint_Type relsym, ppl_const_Linear_Expression_t rhs)

  Assigns to `ph` *the image of* `ph` *with respect to the generalized affine transfer relation* $\mathrm{lhs}' \bowtie \mathrm{rhs}$, *where* $\bowtie$ *is the relation symbol encoded by* `relsym`.

- int ppl_Polyhedron_generalized_affine_preimage_lhs_rhs (ppl_Polyhedron_t ph, ppl_const_Linear_Expression_t lhs, enum ppl_enum_Constraint_Type relsym, ppl_const_Linear_Expression_t rhs)

  Assigns to `ph` *the preimage of* `ph` *with respect to the generalized affine transfer relation* $\mathrm{lhs}' \bowtie \mathrm{rhs}$, *where* $\bowtie$ *is the relation symbol encoded by* `relsym`.

Functions that May Modify the Dimension of the Vector Space

- int ppl_Polyhedron_concatenate_assign (ppl_Polyhedron_t x, ppl_const_Polyhedron_t y)

  Seeing a polyhedron as a set of tuples (its points), assigns to `x` *all the tuples that can be obtained by concatenating, in the order given, a tuple of* `x` *with a tuple of* `y`.

- int ppl_Polyhedron_add_space_dimensions_and_embed (ppl_Polyhedron_t ph, ppl_dimension_type d)

  Adds `d` *new dimensions to the space enclosing the polyhedron* `ph` *and to* `ph` *itself.*

- int ppl_Polyhedron_add_space_dimensions_and_project (ppl_Polyhedron_t ph, ppl_dimension_type d)

  Adds `d` *new dimensions to the space enclosing the polyhedron* `ph`.

- int ppl_Polyhedron_remove_space_dimensions (ppl_Polyhedron_t ph, ppl_dimension_type ds[ ], size_t n)

  Removes from the vector space enclosing `ph` *the space dimensions that are specified in first* `n` *positions of the array* `ds`. *The presence of duplicates in* `ds` *is a waste but an innocuous one.*

- int ppl_Polyhedron_remove_higher_space_dimensions (ppl_Polyhedron_t ph, ppl_dimension_type d)

  Removes the higher dimensions from the vector space enclosing `ph` *so that, upon successful return, the new space dimension is* `d`.

- int ppl_Polyhedron_map_space_dimensions (ppl_Polyhedron_t ph, ppl_dimension_type maps[ ], size_t n)

  Remaps the dimensions of the vector space according to a partial function. This function is specified by means of the `maps` *array, which has* `n` *entries.*

- int ppl_Polyhedron_expand_space_dimension (ppl_Polyhedron_t ph, ppl_dimension_type d, ppl_dimension_type m)

  Expands the d-th dimension of the vector space enclosing `ph` *to* `m` *new space dimensions.*

- int ppl_Polyhedron_fold_space_dimensions (ppl_Polyhedron_t ph, ppl_dimension_type ds[ ], size_t n, ppl_dimension_type d)

  Modifies `ph` *by folding the space dimensions contained in the first* `n` *positions of the array* `ds` *into dimension* `d`. *The presence of duplicates in* `ds` *is a waste but an innocuous one.*

Input/Output Functions

- int ppl_io_print_Polyhedron (ppl_const_Polyhedron_t x)
  Prints `x` *to* `stdout`.
- int ppl_io_fprint_Polyhedron (FILE *stream, ppl_const_Polyhedron_t x)
  Prints `x` *to the given output* `stream`.
- int ppl_io_asprint_Polyhedron (char **strp, ppl_const_Polyhedron_t x)
  Prints `x` *to a malloc-allocated string, a pointer to which is returned via* `strp`.
- int ppl_Polyhedron_ascii_dump (ppl_const_Polyhedron_t x, FILE *stream)
  Dumps an ascii representation of `x` *on* `stream`.
- int ppl_Polyhedron_ascii_load (ppl_Polyhedron_t x, FILE *stream)
  Loads an ascii representation of `x` *from* `stream`.

Ad Hoc Functions for (C or NNC) Polyhedra

The functions listed here below, being specific of the polyhedron domains, do not have a correspondence in other semantic geometric descriptions.

- int ppl_new_C_Polyhedron_from_Generator_System (ppl_Polyhedron_t *pph, ppl_const_Generator_System_t gs)
  Builds a new C polyhedron from the system of generators `gs` *and writes a handle for the newly created polyhedron at address* `pph`.
- int ppl_new_C_Polyhedron_recycle_Generator_System (ppl_Polyhedron_t *pph, ppl_Generator_System_t gs)
  Builds a new C polyhedron recycling the system of generators `gs` *and writes a handle for the newly created polyhedron at address* `pph`.
- int ppl_new_NNC_Polyhedron_from_Generator_System (ppl_Polyhedron_t *pph, ppl_const_Generator_System_t gs)
  Builds a new NNC polyhedron from the system of generators `gs` *and writes a handle for the newly created polyhedron at address* `pph`.
- int ppl_new_NNC_Polyhedron_recycle_Generator_System (ppl_Polyhedron_t *pph, ppl_Generator_System_t gs)
  Builds a new NNC polyhedron recycling the system of generators `gs` *and writes a handle for the newly created polyhedron at address* `pph`.
- int ppl_Polyhedron_get_generators (ppl_const_Polyhedron_t ph, ppl_const_Generator_System_t *pgs)
  Writes a const handle to the generator system defining the polyhedron `ph` *at address* `pgs`.
- int ppl_Polyhedron_get_minimized_generators (ppl_const_Polyhedron_t ph, ppl_const_Generator_System_t *pgs)
  Writes a const handle to the minimized generator system defining the polyhedron `ph` *at address* `pgs`.
- int ppl_Polyhedron_add_generator (ppl_Polyhedron_t ph, ppl_const_Generator_t g)
  Adds a copy of the generator `g` *to the system of generators of* `ph`.

- int ppl_Polyhedron_add_generators (ppl_Polyhedron_t ph, ppl_const_Generator_System_t gs)
  Adds a copy of the system of generators `gs` to the system of generators of `ph`.

- int ppl_Polyhedron_add_recycled_generators (ppl_Polyhedron_t ph, ppl_Generator_System_t gs)
  Adds the system of generators `gs` to the system of generators of `ph`.

- int ppl_Polyhedron_poly_hull_assign (ppl_Polyhedron_t x, ppl_const_Polyhedron_t y)
  Assigns to `x` the poly-hull of `x` and `y`.

- int ppl_Polyhedron_poly_difference_assign (ppl_Polyhedron_t x, ppl_const_Polyhedron_t y)
  Assigns to `x` the poly-difference of `x` and `y`.

- int wrap_assign (ppl_Polyhedron_t ph, ppl_dimension_type ds[ ], size_t n, ppl_enum_Bounded_Integer_Type_Width w, ppl_enum_Bounded_Integer_Type_Representation r, ppl_enum_Bounded_Integer_Type_Overflow o, const ppl_const_Constraint_System_t *pcs, unsigned complexity_threshold, int wrap_individually)
  Assigns to `ph` the polyhedron obtained from `ph` by "wrapping" the vector space defined by the first `n` space dimensions in `ds[]`.

- int ppl_Polyhedron_BHRZ03_widening_assign_with_tokens (ppl_Polyhedron_t x, ppl_const_Polyhedron_t y, unsigned *tp)
  If the polyhedron `y` is contained in (or equal to) the polyhedron `x`, assigns to `x` the BHRZ03-widening of `x` and `y`. If `tp` is not the null pointer, the widening with tokens delay technique is applied with `*tp` available tokens.

- int ppl_Polyhedron_H79_widening_assign_with_tokens (ppl_Polyhedron_t x, ppl_const_Polyhedron_t y, unsigned *tp)
  If the polyhedron `y` is contained in (or equal to) the polyhedron `x`, assigns to `x` the H79-widening of `x` and `y`. If `tp` is not the null pointer, the widening with tokens delay technique is applied with `*tp` available tokens.

- int ppl_Polyhedron_BHRZ03_widening_assign (ppl_Polyhedron_t x, ppl_const_Polyhedron_t y)
  If the polyhedron `y` is contained in (or equal to) the polyhedron `x`, assigns to `x` the BHRZ03-widening of `x` and `y`.

- int ppl_Polyhedron_H79_widening_assign (ppl_Polyhedron_t x, ppl_const_Polyhedron_t y)
  If the polyhedron `y` is contained in (or equal to) the polyhedron `x`, assigns to `x` the H79-widening of `x` and `y`.

- int ppl_Polyhedron_limited_BHRZ03_extrapolation_assign_with_tokens (ppl_Polyhedron_t x, ppl_const_Polyhedron_t y, ppl_const_Constraint_System_t cs, unsigned *tp)
  If the polyhedron `y` is contained in (or equal to) the polyhedron `x`, assigns to `x` the BHRZ03-widening of `x` and `y` intersected with the constraints in `cs` that are satisfied by all the points of `x`. If `tp` is not the null pointer, the widening with tokens delay technique is applied with `*tp` available tokens.

- int ppl_Polyhedron_limited_H79_extrapolation_assign_with_tokens (ppl_Polyhedron_t x, ppl_const_Polyhedron_t y, ppl_const_Constraint_System_t cs, unsigned *tp)
  If the polyhedron `y` is contained in (or equal to) the polyhedron `x`, assigns to `x` the H79-widening of `x` and `y` intersected with the constraints in `cs` that are satisfied by all the points of `x`. If `tp` is not the null pointer, the widening with tokens delay technique is applied with `*tp` available tokens.

- int ppl_Polyhedron_limited_BHRZ03_extrapolation_assign (ppl_Polyhedron_t x, ppl_const_Polyhedron_t y, ppl_const_Constraint_System_t cs)

If the polyhedron `y` *is contained in (or equal to) the polyhedron* `x`*, assigns to* `x` *the BHRZ03-widening of* `x` *and* `y` *intersected with the constraints in* `cs` *that are satisfied by all the points of* `x`*.*

- int ppl_Polyhedron_limited_H79_extrapolation_assign (ppl_Polyhedron_t x, ppl_const_Polyhedron_t y, ppl_const_Constraint_System_t cs)

  If the polyhedron `y` *is contained in (or equal to) the polyhedron* `x`*, assigns to* `x` *the H79-widening of* `x` *and* `y` *intersected with the constraints in* `cs` *that are satisfied by all the points of* `x`*.*

- int ppl_Polyhedron_bounded_BHRZ03_extrapolation_assign_with_tokens (ppl_Polyhedron_t x, ppl_const_Polyhedron_t y, ppl_const_Constraint_System_t cs, unsigned *tp)

  If the polyhedron `y` *is contained in (or equal to) the polyhedron* `x`*, assigns to* `x` *the BHRZ03-widening of* `x` *and* `y` *intersected with the constraints in* `cs` *that are satisfied by all the points of* `x`*, further intersected with all the constraints of the form* $\pm v \leq r$ *and* $\pm v < r$*, with* $r \in \mathbb{Q}$*, that are satisfied by all the points of* `x`*. If* `tp` *is not the null pointer, the widening with tokens delay technique is applied with* `*tp` *available tokens.*

- int ppl_Polyhedron_bounded_H79_extrapolation_assign_with_tokens (ppl_Polyhedron_t x, ppl_const_Polyhedron_t y, ppl_const_Constraint_System_t cs, unsigned *tp)

  If the polyhedron `y` *is contained in (or equal to) the polyhedron* `x`*, assigns to* `x` *the H79-widening of* `x` *and* `y` *intersected with the constraints in* `cs` *that are satisfied by all the points of* `x`*, further intersected with all the constraints of the form* $\pm v \leq r$ *and* $\pm v < r$*, with* $r \in \mathbb{Q}$*, that are satisfied by all the points of* `x`*. If* `tp` *is not the null pointer, the widening with tokens delay technique is applied with* `*tp` *available tokens.*

- int ppl_Polyhedron_bounded_BHRZ03_extrapolation_assign (ppl_Polyhedron_t x, ppl_const_Polyhedron_t y, ppl_const_Constraint_System_t cs)

  If the polyhedron `y` *is contained in (or equal to) the polyhedron* `x`*, assigns to* `x` *the BHRZ03-widening of* `x` *and* `y` *intersected with the constraints in* `cs` *that are satisfied by all the points of* `x`*, further intersected with all the constraints of the form* $\pm v \leq r$ *and* $\pm v < r$*, with* $r \in \mathbb{Q}$*, that are satisfied by all the points of* `x`*.*

- int ppl_Polyhedron_bounded_H79_extrapolation_assign (ppl_Polyhedron_t x, ppl_const_Polyhedron_t y, ppl_const_Constraint_System_t cs)

  If the polyhedron `y` *is contained in (or equal to) the polyhedron* `x`*, assigns to* `x` *the H79-widening of* `x` *and* `y` *intersected with the constraints in* `cs` *that are satisfied by all the points of* `x`*, further intersected with all the constraints of the form* $\pm v \leq r$ *and* $\pm v < r$*, with* $r \in \mathbb{Q}$*, that are satisfied by all the points of* `x`*.*

7.154.1 Detailed Description

Types and functions for the domains of C and NNC convex polyhedra. Types and functions for ppl_Polyhedron_tag.

The types and functions for convex polyhedra provide a single interface for accessing both topologically closed (C) and not necessarily closed (NNC) convex polyhedra. The distinction between C and NNC polyhedra need only be explicitly stated when *creating* or *assigning* a polyhedron object, by means of one of the functions `ppl_new_*` and `ppl_assign_*`.

Having a single datatype does not mean that C and NNC polyhedra can be freely interchanged: as specified in the main manual, most library functions require their arguments to be topologically and/or space-dimension compatible.

7.154.2 Friends And Related Function Documentation

7.154.2.1 int ppl_new_C_Polyhedron_from_space_dimension (ppl_Polyhedron_t * *pph*, ppl_dimension_type *d*, int *empty*) [related]

Builds a C polyhedron of dimension `d` and writes an handle to it at address `pph`. If `empty` is different from zero, the newly created polyhedron will be empty; otherwise, it will be a universe polyhedron.

7.154.2.2 int ppl_new_C_Polyhedron_from_C_Polyhedron (ppl_Polyhedron_t * *pph*, ppl_const_Polyhedron_t *ph*) [related]

Builds a C polyhedron that is a copy of `ph`; writes a handle for the newly created polyhedron at address `pph`.

7.154.2.3 int ppl_new_C_Polyhedron_from_C_Polyhedron_with_complexity (ppl_Polyhedron_t * *pph*, ppl_const_Polyhedron_t *ph*, int *complexity*) [related]

Builds a C polyhedron that is a copy of `ph`; writes a handle for the newly created polyhedron at address `pph`.

Note

The complexity argument is ignored.

7.154.2.4 int ppl_new_C_Polyhedron_from_Constraint_System (ppl_Polyhedron_t * *pph*, ppl_const_Constraint_System_t *cs*) [related]

Builds a new C polyhedron from the system of constraints `cs` and writes a handle for the newly created polyhedron at address `pph`.

The new polyhedron will inherit the space dimension of `cs`.

7.154.2.5 int ppl_new_C_Polyhedron_recycle_Constraint_System (ppl_Polyhedron_t * *pph*, ppl_Constraint_System_t *cs*) [related]

Builds a new C polyhedron recycling the system of constraints `cs` and writes a handle for the newly created polyhedron at address `pph`.

The new polyhedron will inherit the space dimension of `cs`.

Warning

This function modifies the constraint system referenced by `cs`: upon return, no assumption can be made on its value.

7.154.2.6 int ppl_new_C_Polyhedron_from_Congruence_System (ppl_Polyhedron_t * *pph*, ppl_const_Congruence_System_t *cs*) [related]

Builds a new C polyhedron from the system of congruences `cs` and writes a handle for the newly created polyhedron at address `pph`.

The new polyhedron will inherit the space dimension of `cs`.

7.154.2.7 int ppl_new_C_Polyhedron_recycle_Congruence_System (ppl_Polyhedron_t * *pph*, ppl_Congruence_System_t *cs*) [related]

Builds a new C polyhedron recycling the system of congruences `cs` and writes a handle for the newly created polyhedron at address `pph`.

The new polyhedron will inherit the space dimension of `cs`.

Warning

This function modifies the congruence system referenced by `cs:` upon return, no assumption can be made on its value.

7.154.2.8 int ppl_assign_C_Polyhedron_from_C_Polyhedron (ppl_Polyhedron_t *dst*, ppl_const_Polyhedron_t *src*) [related]

Assigns a copy of the C polyhedron `src` to the C polyhedron `dst`.

7.154.2.9 int ppl_new_NNC_Polyhedron_from_space_dimension (ppl_Polyhedron_t * *pph*, ppl_dimension_type *d*, int *empty*) [related]

Builds an NNC polyhedron of dimension `d` and writes an handle to it at address `pph`. If `empty` is different from zero, the newly created polyhedron will be empty; otherwise, it will be a universe polyhedron.

7.154.2.10 int ppl_new_NNC_Polyhedron_from_NNC_Polyhedron (ppl_Polyhedron_t * *pph*, ppl_const_Polyhedron_t *ph*) [related]

Builds an NNC polyhedron that is a copy of `ph`; writes a handle for the newly created polyhedron at address `pph`.

7.154.2.11 int ppl_new_NNC_Polyhedron_from_NNC_Polyhedron_with_complexity (ppl_Polyhedron_t * *pph*, ppl_const_Polyhedron_t *ph*, int *complexity*) [related]

Builds an NNC polyhedron that is a copy of `ph`; writes a handle for the newly created polyhedron at address `pph`.

Note

The complexity argument is ignored.

7.154.2.12 int ppl_new_NNC_Polyhedron_from_Constraint_System (ppl_Polyhedron_t * *pph*, ppl_const_Constraint_System_t *cs*) [related]

Builds a new NNC polyhedron from the system of constraints `cs` and writes a handle for the newly created polyhedron at address `pph`.

The new polyhedron will inherit the space dimension of `cs`.

7.154.2.13 int ppl_new_NNC_Polyhedron_recycle_Constraint_System (ppl_Polyhedron_t * *pph*, ppl_Constraint_System_t *cs*) [related]

Builds a new NNC polyhedron recycling the system of constraints `cs` and writes a handle for the newly created polyhedron at address `pph`.

The new polyhedron will inherit the space dimension of `cs`.

Warning

This function modifies the constraint system referenced by `cs:` upon return, no assumption can be made on its value.

7.154.2.14 int ppl_new_NNC_Polyhedron_from_Congruence_System (ppl_Polyhedron_t * *pph*, ppl_const_Congruence_System_t *cs*) [related]

Builds a new NNC polyhedron from the system of congruences `cs` and writes a handle for the newly created polyhedron at address `pph`.

The new polyhedron will inherit the space dimension of `cs`.

7.154.2.15 int ppl_new_NNC_Polyhedron_recycle_Congruence_System (ppl_Polyhedron_t * *pph*, ppl_Congruence_System_t *cs*) [related]

Builds a new NNC polyhedron recycling the system of congruences `cs` and writes a handle for the newly created polyhedron at address `pph`.

The new polyhedron will inherit the space dimension of `cs`.

Warning

This function modifies the congruence system referenced by `cs:` upon return, no assumption can be made on its value.

7.154.2.16 int ppl_assign_NNC_Polyhedron_from_NNC_Polyhedron (ppl_Polyhedron_t *dst*, ppl_const_Polyhedron_t *src*) [related]

Assigns a copy of the NNC polyhedron src to the NNC polyhedron dst.

7.154.2.17 int ppl_new_C_Polyhedron_from_NNC_Polyhedron (ppl_Polyhedron_t * *pph*, ppl_const_Polyhedron_t *ph*) [related]

Builds a C polyhedron that is a copy of the topological closure of the NNC polyhedron ph; writes a handle for the newly created polyhedron at address pph.

7.154.2.18 int ppl_new_C_Polyhedron_from_NNC_Polyhedron_with_complexity (ppl_Polyhedron_t * *pph*, ppl_const_Polyhedron_t *ph*, int *complexity*) [related]

Builds a C polyhedron that approximates NNC_Polyhedron ph, using an algorithm whose complexity does not exceed complexity; writes a handle for the newly created polyhedron at address pph.

Note

The complexity argument, which can take values PPL_COMPLEXITY_CLASS_POLYNOMIAL, PPL_COMPLEXITY_CLASS_SIMPLEX and PPL_COMPLEXITY_CLASS_ANY, is ignored since the exact constructor has polynomial complexity.

7.154.2.19 int ppl_new_NNC_Polyhedron_from_C_Polyhedron (ppl_Polyhedron_t * *pph*, ppl_const_Polyhedron_t *ph*) [related]

Builds an NNC polyhedron that is a copy of the C polyhedron ph; writes a handle for the newly created polyhedron at address pph.

7.154.2.20 int ppl_new_NNC_Polyhedron_from_C_Polyhedron_with_complexity (ppl_Polyhedron_t * *pph*, ppl_const_Polyhedron_t *ph*, int *complexity*) [related]

Builds an NNC polyhedron that approximates C_Polyhedron ph, using an algorithm whose complexity does not exceed complexity; writes a handle for the newly created polyhedron at address pph.

Note

The complexity argument, which can take values PPL_COMPLEXITY_CLASS_POLYNOMIAL, PPL_COMPLEXITY_CLASS_SIMPLEX and PPL_COMPLEXITY_CLASS_ANY, is ignored since the exact constructor has polynomial complexity.

7.154.2.21 int ppl_delete_Polyhedron (ppl_const_Polyhedron_t *ph*) [related]

Invalidates the handle ph: this makes sure the corresponding resources will eventually be released.

7.154.2.22 int ppl_Polyhedron_space_dimension (ppl_const_Polyhedron_t *ph*, ppl_dimension_type * *m*) [related]

Writes to m the dimension of the vector space enclosing ph.

7.154.2.23 int ppl_Polyhedron_affine_dimension (ppl_const_Polyhedron_t *ph*, ppl_dimension_type * *m*) [related]

Writes to m the affine dimension of ph (not to be confused with the dimension of its enclosing vector space) or 0, if ph is empty.

7.154.2.24 int ppl_Polyhedron_relation_with_Constraint (ppl_const_Polyhedron_t *ph*, ppl_const_Constraint_t *c*) [related]

Checks the relation between the polyhedron ph and the constraint c.

If successful, returns a non-negative integer that is obtained as the bitwise or of the bits (chosen among PPL_POLY_CON_RELATION_IS_DISJOINT PPL_POLY_CON_RELATION_STRICTLY_INTERSECTS, PPL_POLY_CON_RELATION_IS_INCLUDED, and PPL_POLY_CON_RELATION_SATURATES) that describe the relation between ph and c.

7.154.2.25 int ppl_Polyhedron_relation_with_Generator (ppl_const_Polyhedron_t *ph*, ppl_const_Generator_t *g*) [related]

Checks the relation between the polyhedron ph and the generator g.

If successful, returns a non-negative integer that is obtained as the bitwise or of the bits (only PPL_POLY_GEN_RELATION_SUBSUMES, at present) that describe the relation between ph and g.

7.154.2.26 int ppl_Polyhedron_get_constraints (ppl_const_Polyhedron_t *ph*, ppl_const_Constraint_System_t * *pcs*) [related]

Writes a const handle to the constraint system defining the polyhedron ph at address pcs.

7.154.2.27 int ppl_Polyhedron_get_congruences (ppl_const_Polyhedron_t *ph*, ppl_const_Congruence_System_t * *pcs*) [related]

Writes at address pcs a const handle to a system of congruences approximating the polyhedron ph.

7.154.2.28 int ppl_Polyhedron_get_minimized_constraints (ppl_const_Polyhedron_t *ph*, ppl_const_Constraint_System_t * *pcs*) [related]

Writes a const handle to the minimized constraint system defining the polyhedron ph at address pcs.

7.154.2.29 int ppl_Polyhedron_get_minimized_congruences (ppl_const_Polyhedron_t *ph*, ppl_const_Congruence_System_t * *pcs*) [related]

Writes at address pcs a const handle to a system of minimized congruences approximating the polyhedron ph.

7.154.2.30 int ppl_Polyhedron_is_empty (ppl_const_Polyhedron_t *ph*) [related]

Returns a positive integer if ph is empty; returns 0 if ph is not empty.

7.154.2.31 int ppl_Polyhedron_is_universe (ppl_const_Polyhedron_t *ph*) [related]

Returns a positive integer if ph is a universe polyhedron; returns 0 if it is not.

7.154.2.32 int ppl_Polyhedron_is_bounded (ppl_const_Polyhedron_t *ph*) [related]

Returns a positive integer if ph is bounded; returns 0 if ph is unbounded.

7.154.2.33 int ppl_Polyhedron_contains_integer_point (ppl_const_Polyhedron_t *ph*) [related]

Returns a positive integer if ph contains at least one integer point; returns 0 otherwise.

7.154.2.34 int ppl_Polyhedron_is_topologically_closed (ppl_const_Polyhedron_t *ph*) [related]

Returns a positive integer if ph is topologically closed; returns 0 if ph is not topologically closed.

7.154.2.35 int ppl_Polyhedron_is_discrete (ppl_const_Polyhedron_t *ph*) [related]

Returns a positive integer if `ph` is a discrete set; returns 0 if `ph` is not a discrete set.

7.154.2.36 int ppl_Polyhedron_constrains (ppl_Polyhedron_t *ph*, ppl_dimension_type *var*) [related]

Returns a positive integer if `ph` constrains `var`; returns 0 if `ph` does not constrain `var`.

7.154.2.37 int ppl_Polyhedron_bounds_from_above (ppl_const_Polyhedron_t *ph*, ppl_const_Linear_Expression_t *le*) [related]

Returns a positive integer if `le` is bounded from above in `ph`; returns 0 otherwise.

7.154.2.38 int ppl_Polyhedron_bounds_from_below (ppl_const_Polyhedron_t *ph*, ppl_const_Linear_Expression_t *le*) [related]

Returns a positive integer if `le` is bounded from below in `ph`; returns 0 otherwise.

7.154.2.39 int ppl_Polyhedron_maximize_with_point (ppl_const_Polyhedron_t *ph*, ppl_const_Linear_Expression_t *le*, ppl_Coefficient_t *sup_n*, ppl_Coefficient_t *sup_d*, int * *pmaximum*, ppl_Generator_t *point*) [related]

Returns a positive integer if `ph` is not empty and `le` is bounded from above in `ph`, in which case the supremum value and a point where `le` reaches it are computed.

Parameters

ph The polyhedron constraining `le`;

le The linear expression to be maximized subject to `ph`;

sup_n Will be assigned the numerator of the supremum value;

sup_d Will be assigned the denominator of the supremum value;

pmaximum Will store 1 in this location if the supremum is also the maximum, will store 0 otherwise;

point Will be assigned the point or closure point where `le` reaches the extremum value.

If `ph` is empty or `le` is not bounded from above, 0 will be returned and `sup_n`, `sup_d`, `*pmaximum` and `point` will be left untouched.

7.154.2.40 int ppl_Polyhedron_maximize (ppl_const_Polyhedron_t *ph*, ppl_const_Linear_Expression_t *le*, ppl_Coefficient_t *sup_n*, ppl_Coefficient_t *sup_d*, int * *pmaximum*) [related]

The same as ppl_Polyhedron_maximize_with_point, but without the output argument for the location where the supremum value is reached.

7.154.2.41 int ppl_Polyhedron_minimize_with_point (ppl_const_Polyhedron_t *ph*, ppl_const_Linear_Expression_t *le*, ppl_Coefficient_t *inf_n*, ppl_Coefficient_t *inf_d*, int * *pminimum*, ppl_Generator_t *point*) [related]

Returns a positive integer if `ph` is not empty and `le` is bounded from below in `ph`, in which case the infimum value and a point where `le` reaches it are computed.

Parameters

ph The polyhedron constraining `le`;

le The linear expression to be minimized subject to `ph`;

inf_n Will be assigned the numerator of the infimum value;

inf_d Will be assigned the denominator of the infimum value;

pminimum Will store 1 in this location if the infimum is also the minimum, will store 0 otherwise;

point Will be assigned the point or closure point where `le` reaches the extremum value.

If `ph` is empty or `le` is not bounded from below, 0 will be returned and `sup_n`, `sup_d`, `*pmaximum` and `point` will be left untouched.

7.154.2.42 int ppl_Polyhedron_contains_Polyhedron (ppl_const_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*) [related]

Returns a positive integer if `x` contains or is equal to `y`; returns 0 if it does not.

7.154.2.43 int ppl_Polyhedron_strictly_contains_Polyhedron (ppl_const_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*) [related]

Returns a positive integer if `x` strictly contains `y`; returns 0 if it does not.

7.154.2.44 int ppl_Polyhedron_is_disjoint_from_Polyhedron (ppl_const_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*) [related]

Returns a positive integer if `x` and `y` are disjoint; returns 0 if they are not.

7.154.2.45 int ppl_Polyhedron_equals_Polyhedron (ppl_const_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*) [related]

Returns a positive integer if `x` and `y` are the same polyhedron; returns 0 if they are different.

Note that `x` and `y` may be topology- and/or dimension-incompatible polyhedra: in those cases, the value 0 is returned.

7.154.2.46 int ppl_Polyhedron_OK (ppl_const_Polyhedron_t *ph*) [related]

Returns a positive integer if ph is well formed, i.e., if it satisfies all its implementation invariants; returns 0 and perhaps makes some noise if ph is broken. Useful for debugging purposes.

7.154.2.47 int ppl_Polyhedron_external_memory_in_bytes (ppl_const_Polyhedron_t *ph*, size_t * *sz*) [related]

Writes to sz a lower bound to the size in bytes of the memory managed by ph.

7.154.2.48 int ppl_Polyhedron_total_memory_in_bytes (ppl_const_Polyhedron_t *ph*, size_t * *sz*) [related]

Writes to sz a lower bound to the size in bytes of the memory managed by ph.

7.154.2.49 int ppl_Polyhedron_add_constraint (ppl_Polyhedron_t *ph*, ppl_const_Constraint_t *c*) [related]

Adds a copy of the constraint c to the system of constraints of ph.

7.154.2.50 int ppl_Polyhedron_add_congruence (ppl_Polyhedron_t *ph*, ppl_const_Congruence_t *c*) [related]

Adds a copy of the congruence c to polyhedron of ph.

7.154.2.51 int ppl_Polyhedron_add_constraints (ppl_Polyhedron_t *ph*, ppl_const_Constraint_System_t *cs*) [related]

Adds a copy of the system of constraints cs to the system of constraints of ph.

7.154.2.52 int ppl_Polyhedron_add_congruences (ppl_Polyhedron_t *ph*, ppl_const_Congruence_System_t *cs*) [related]

Adds a copy of the system of congruences cs to the polyhedron ph.

7.154.2.53 int ppl_Polyhedron_add_recycled_constraints (ppl_Polyhedron_t *ph*, ppl_Constraint_System_t *cs*) [related]

Adds the system of constraints cs to the system of constraints of ph.

Warning

This function modifies the constraint system referenced by cs: upon return, no assumption can be made on its value.

7.154.2.54 int ppl_Polyhedron_add_recycled_congruences (ppl_Polyhedron_t *ph*, ppl_Congruence_System_t *cs*) [related]

Adds the system of congruences cs to the polyhedron ph.

Warning

This function modifies the congruence system referenced by cs: upon return, no assumption can be made on its value.

7.154.2.55 int ppl_Polyhedron_refine_with_constraint (ppl_Polyhedron_t *ph*, ppl_const_Constraint_t *c*) [related]

Refines ph using constraint c.

7.154.2.56 int ppl_Polyhedron_refine_with_congruence (ppl_Polyhedron_t *ph*, ppl_const_Congruence_t *c*) [related]

Refines ph using congruence c.

7.154.2.57 int ppl_Polyhedron_refine_with_constraints (ppl_Polyhedron_t *ph*, ppl_const_Constraint_System_t *cs*) [related]

Refines ph using the constraints in cs.

7.154.2.58 int ppl_Polyhedron_refine_with_congruences (ppl_Polyhedron_t *ph*, ppl_const_Congruence_System_t *cs*) [related]

Refines ph using the congruences in cs.

7.154.2.59 int ppl_Polyhedron_intersection_assign (ppl_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*) [related]

Intersects x with polyhedron y and assigns the result to x.

7.154.2.60 int ppl_Polyhedron_upper_bound_assign (ppl_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*) [related]

Assigns to `x` an upper bound of `x` and `y`.

For the domain of polyhedra, this is the same as `ppl_Polyhedron_poly_hull_assign(x, y)`.

7.154.2.61 int ppl_Polyhedron_difference_assign (ppl_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*) [related]

Same as ppl_Polyhedron_poly_difference_assign(x, y).

7.154.2.62 int ppl_Polyhedron_simplify_using_context_assign (ppl_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*) [related]

Assigns to `x` the *meet-preserving simplification* of `x` with respect to context `y`. Returns a positive integer if `x` and `y` have a nonempty intersection; returns `0` if they are disjoint.

7.154.2.63 int ppl_Polyhedron_time_elapse_assign (ppl_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*) [related]

Assigns to `x` the *time-elapse* between the polyhedra `x` and `y`.

7.154.2.64 int ppl_Polyhedron_topological_closure_assign (ppl_Polyhedron_t *ph*) [related]

Assigns to `ph` its topological closure.

7.154.2.65 int ppl_Polyhedron_unconstrain_space_dimension (ppl_Polyhedron_t *ph*, ppl_dimension_type *var*) [related]

Modifies `ph` by *unconstraining* the space dimension `var`.

7.154.2.66 int ppl_Polyhedron_unconstrain_space_dimensions (ppl_Polyhedron_t *ph*, ppl_dimension_type *ds*[ ], size_t *n*) [related]

Modifies `ph` by *unconstraining* the space dimensions that are specified in the first `n` positions of the array `ds`. The presence of duplicates in `ds` is a waste but an innocuous one.

7.154.2.67 int ppl_Polyhedron_affine_image (ppl_Polyhedron_t *ph*, ppl_dimension_type *var*, ppl_const_Linear_Expression_t *le*, ppl_const_Coefficient_t *d*) [related]

Transforms the polyhedron ph, assigning an affine expression to the specified variable.

Parameters

ph The polyhedron that is transformed;

var The variable to which the affine expression is assigned;

le The numerator of the affine expression;

d The denominator of the affine expression.

7.154.2.68 int ppl_Polyhedron_affine_preimage (ppl_Polyhedron_t *ph*, ppl_dimension_type *var*, ppl_const_Linear_Expression_t *le*, ppl_const_Coefficient_t *d*) [related]

Transforms the polyhedron ph, substituting an affine expression to the specified variable.

Parameters

ph The polyhedron that is transformed;

var The variable to which the affine expression is substituted;

le The numerator of the affine expression;

d The denominator of the affine expression.

7.154.2.69 int ppl_Polyhedron_bounded_affine_image (ppl_Polyhedron_t *ph*, ppl_dimension_type *var*, ppl_const_Linear_Expression_t *lb*, ppl_const_Linear_Expression_t *ub*, ppl_const_Coefficient_t *d*) [related]

Assigns to ph the image of ph with respect to the *generalized affine transfer relation* $\frac{\mathrm{lb}}{\mathrm{d}} \leq \mathrm{var}' \leq \frac{\mathrm{ub}}{\mathrm{d}}$.

Parameters

ph The polyhedron that is transformed;

var The variable bounded by the generalized affine transfer relation;

lb The numerator of the lower bounding affine expression;

ub The numerator of the upper bounding affine expression;

d The (common) denominator of the lower and upper bounding affine expressions.

7.154.2.70 int ppl_Polyhedron_bounded_affine_preimage (ppl_Polyhedron_t *ph*, ppl_dimension_type *var*, ppl_const_Linear_Expression_t *lb*, ppl_const_Linear_Expression_t *ub*, ppl_const_Coefficient_t *d*) [related]

Assigns to ph the preimage of ph with respect to the *generalized affine transfer relation* $\frac{\mathrm{lb}}{\mathrm{d}} \leq \mathrm{var}' \leq \frac{\mathrm{ub}}{\mathrm{d}}$.

Parameters

ph The polyhedron that is transformed;

var The variable bounded by the generalized affine transfer relation;

lb The numerator of the lower bounding affine expression;

ub The numerator of the upper bounding affine expression;

d The (common) denominator of the lower and upper bounding affine expressions.

7.154.2.71 int ppl_Polyhedron_generalized_affine_image (ppl_Polyhedron_t *ph*, ppl_dimension_type *var*, enum ppl_enum_Constraint_Type *relsym*, ppl_const_Linear_Expression_t *le*, ppl_const_Coefficient_t *d*) [related]

Assigns to `ph` the image of `ph` with respect to the *generalized affine transfer relation* $\mathrm{var}' \bowtie \frac{\mathrm{le}}{\mathrm{d}}$, where $\bowtie$ is the relation symbol encoded by `relsym`.

Parameters

ph The polyhedron that is transformed;

var The left hand side variable of the generalized affine transfer relation;

relsym The relation symbol;

le The numerator of the right hand side affine expression;

d The denominator of the right hand side affine expression.

7.154.2.72 int ppl_Polyhedron_generalized_affine_preimage (ppl_Polyhedron_t *ph*, ppl_dimension_type *var*, enum ppl_enum_Constraint_Type *relsym*, ppl_const_Linear_Expression_t *le*, ppl_const_Coefficient_t *d*) [related]

Assigns to `ph` the preimage of `ph` with respect to the *generalized affine transfer relation* $\mathrm{var}' \bowtie \frac{\mathrm{le}}{\mathrm{d}}$, where $\bowtie$ is the relation symbol encoded by `relsym`.

Parameters

ph The polyhedron that is transformed;

var The left hand side variable of the generalized affine transfer relation;

relsym The relation symbol;

le The numerator of the right hand side affine expression;

d The denominator of the right hand side affine expression.

7.154.2.73 int ppl_Polyhedron_generalized_affine_image_lhs_rhs (ppl_Polyhedron_t *ph*, ppl_const_Linear_Expression_t *lhs*, enum ppl_enum_Constraint_Type *relsym*, ppl_const_Linear_Expression_t *rhs*) [related]

Assigns to `ph` the image of `ph` with respect to the *generalized affine transfer relation* $\mathrm{lhs}' \bowtie \mathrm{rhs}$, where $\bowtie$ is the relation symbol encoded by `relsym`.

Parameters

ph The polyhedron that is transformed;

lhs The left hand side affine expression;

relsym The relation symbol;

rhs The right hand side affine expression.

7.154.2.74 int ppl_Polyhedron_generalized_affine_preimage_lhs_rhs (ppl_Polyhedron_t *ph*, ppl_const_Linear_Expression_t *lhs*, enum ppl_enum_Constraint_Type *relsym*, ppl_const_Linear_Expression_t *rhs*) [related]

Assigns to `ph` the preimage of `ph` with respect to the *generalized affine transfer relation* $\mathrm{lhs}' \bowtie \mathrm{rhs}$, where $\bowtie$ is the relation symbol encoded by `relsym`.

Parameters

ph The polyhedron that is transformed;

lhs The left hand side affine expression;

relsym The relation symbol;

rhs The right hand side affine expression.

7.154.2.75 int ppl_Polyhedron_concatenate_assign (ppl_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*) [related]

Seeing a polyhedron as a set of tuples (its points), assigns to `x` all the tuples that can be obtained by concatenating, in the order given, a tuple of `x` with a tuple of `y`.

7.154.2.76 int ppl_Polyhedron_add_space_dimensions_and_embed (ppl_Polyhedron_t *ph*, ppl_dimension_type *d*) [related]

Adds `d` new dimensions to the space enclosing the polyhedron `ph` and to `ph` itself.

7.154.2.77 int ppl_Polyhedron_add_space_dimensions_and_project (ppl_Polyhedron_t *ph*, ppl_dimension_type *d*) [related]

Adds `d` new dimensions to the space enclosing the polyhedron `ph`.

7.154.2.78 int ppl_Polyhedron_remove_space_dimensions (ppl_Polyhedron_t *ph*, ppl_dimension_type *ds*[ ], size_t *n*) [related]

Removes from the vector space enclosing `ph` the space dimensions that are specified in first `n` positions of the array `ds`. The presence of duplicates in `ds` is a waste but an innocuous one.

7.154.2.79 int ppl_Polyhedron_remove_higher_space_dimensions (ppl_Polyhedron_t *ph*, ppl_dimension_type *d*) [related]

Removes the higher dimensions from the vector space enclosing `ph` so that, upon successful return, the new space dimension is `d`.

7.154.2.80 int ppl_Polyhedron_map_space_dimensions (ppl_Polyhedron_t *ph*, ppl_dimension_type *maps*[ ], size_t *n*) [related]

Remaps the dimensions of the vector space according to a *partial function*. This function is specified by means of the `maps` array, which has `n` entries.

The partial function is defined on dimension `i` if `i < n` and `maps[i] != ppl_not_a_dimension`; otherwise it is undefined on dimension `i`. If the function is defined on dimension `i`, then dimension `i` is mapped onto dimension `maps[i]`.

The result is undefined if `maps` does not encode a partial function with the properties described in the *specification of the mapping operator*.

7.154.2.81 int ppl_Polyhedron_expand_space_dimension (ppl_Polyhedron_t *ph*, ppl_dimension_type *d*, ppl_dimension_type *m*) [related]

Expands the d-th dimension of the vector space enclosing `ph` to `m` new space dimensions.

7.154.2.82 int ppl_Polyhedron_fold_space_dimensions (ppl_Polyhedron_t *ph*, ppl_dimension_type *ds*[ ], size_t *n*, ppl_dimension_type *d*) [related]

Modifies `ph` by *folding* the space dimensions contained in the first `n` positions of the array `ds` into dimension `d`. The presence of duplicates in `ds` is a waste but an innocuous one.

7.154.2.83 int ppl_io_print_Polyhedron (ppl_const_Polyhedron_t *x*) [related]

Prints `x` to `stdout`.

7.154.2.84 int ppl_io_fprint_Polyhedron (FILE * *stream*, ppl_const_Polyhedron_t *x*) [related]

Prints `x` to the given output `stream`.

7.154.2.85 int ppl_io_asprint_Polyhedron (char ** *strp*, ppl_const_Polyhedron_t *x*) [related]

Prints x to a malloc-allocated string, a pointer to which is returned via strp.

7.154.2.86 int ppl_Polyhedron_ascii_dump (ppl_const_Polyhedron_t *x*, FILE * *stream*) [related]

Dumps an ascii representation of x on stream.

7.154.2.87 int ppl_Polyhedron_ascii_load (ppl_Polyhedron_t *x*, FILE * *stream*) [related]

Loads an ascii representation of x from stream.

7.154.2.88 int ppl_new_C_Polyhedron_from_Generator_System (ppl_Polyhedron_t * *pph*, ppl_const_Generator_System_t *gs*) [related]

Builds a new C polyhedron from the system of generators gs and writes a handle for the newly created polyhedron at address pph.

The new polyhedron will inherit the space dimension of gs.

7.154.2.89 int ppl_new_C_Polyhedron_recycle_Generator_System (ppl_Polyhedron_t * *pph*, ppl_Generator_System_t *gs*) [related]

Builds a new C polyhedron recycling the system of generators gs and writes a handle for the newly created polyhedron at address pph.

The new polyhedron will inherit the space dimension of gs.

Warning

This function modifies the generator system referenced by gs: upon return, no assumption can be made on its value.

7.154.2.90 int ppl_new_NNC_Polyhedron_from_Generator_System (ppl_Polyhedron_t * *pph*, ppl_const_Generator_System_t *gs*) [related]

Builds a new NNC polyhedron from the system of generators gs and writes a handle for the newly created polyhedron at address pph.

The new polyhedron will inherit the space dimension of gs.

7.154.2.91 int ppl_new_NNC_Polyhedron_recycle_Generator_System (ppl_Polyhedron_t * *pph*, ppl_Generator_System_t *gs*) [related]

Builds a new NNC polyhedron recycling the system of generators `gs` and writes a handle for the newly created polyhedron at address `pph`.

The new polyhedron will inherit the space dimension of `gs`.

Warning

This function modifies the generator system referenced by `gs`: upon return, no assumption can be made on its value.

7.154.2.92 int ppl_Polyhedron_get_generators (ppl_const_Polyhedron_t *ph*, ppl_const_Generator_System_t * *pgs*) [related]

Writes a const handle to the generator system defining the polyhedron `ph` at address `pgs`.

7.154.2.93 int ppl_Polyhedron_get_minimized_generators (ppl_const_Polyhedron_t *ph*, ppl_const_Generator_System_t * *pgs*) [related]

Writes a const handle to the minimized generator system defining the polyhedron `ph` at address `pgs`.

7.154.2.94 int ppl_Polyhedron_add_generator (ppl_Polyhedron_t *ph*, ppl_const_Generator_t *g*) [related]

Adds a copy of the generator `g` to the system of generators of `ph`.

7.154.2.95 int ppl_Polyhedron_add_generators (ppl_Polyhedron_t *ph*, ppl_const_Generator_System_t *gs*) [related]

Adds a copy of the system of generators `gs` to the system of generators of `ph`.

7.154.2.96 int ppl_Polyhedron_add_recycled_generators (ppl_Polyhedron_t *ph*, ppl_Generator_System_t *gs*) [related]

Adds the system of generators `gs` to the system of generators of `ph`.

Warning

This function modifies the generator system referenced by `gs`: upon return, no assumption can be made on its value.

7.154.2.97 int ppl_Polyhedron_poly_hull_assign (ppl_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*) [related]

Assigns to x the poly-hull of x and y.

7.154.2.98 int ppl_Polyhedron_poly_difference_assign (ppl_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*) [related]

Assigns to x the *poly-difference* of x and y.

7.154.2.99 int wrap_assign (ppl_Polyhedron_t *ph*, ppl_dimension_type *ds*[ ], size_t *n*, ppl_enum_Bounded_Integer_Type_Width *w*, ppl_enum_Bounded_Integer_Type_Representation *r*, ppl_enum_Bounded_Integer_Type_Overflow *o*, const ppl_const_Constraint_System_t * *pcs*, unsigned *complexity_threshold*, int *wrap_individually*) [related]

Assigns to ph the polyhedron obtained from ph by "wrapping" the vector space defined by the first n space dimensions in ds[].

Parameters

ph The polyhedron that is transformed;

ds[ ] Specifies the space dimensions to be wrapped.

n The first n space dimensions in the array ds[] will be wrapped.

w The width of the bounded integer type corresponding to all the dimensions to be wrapped.

r The representation of the bounded integer type corresponding to all the dimensions to be wrapped.

o The overflow behavior of the bounded integer type corresponding to all the dimensions to be wrapped.

pcs Possibly null pointer to a constraint system whose space dimensions are the first n dimensions in ds[]. If *pcs depends on variables not in vars, the behavior is undefined. When non-null, the constraint system is assumed to represent the conditional or looping construct guard with respect to which wrapping is performed. Since wrapping requires the computation of upper bounds and due to non-distributivity of constraint refinement over upper bounds, passing a constraint system in this way can be more precise than refining the result of the wrapping operation with the constraints in cs.

complexity_threshold A precision parameter where higher values result in possibly improved precision.

wrap_individually Non-zero if the dimensions should be wrapped individually (something that results in much greater efficiency to the detriment of precision).

7.154.2.100 int ppl_Polyhedron_BHRZ03_widening_assign_with_tokens (ppl_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*, unsigned * *tp*) [related]

If the polyhedron y is contained in (or equal to) the polyhedron x, assigns to x the *BHRZ03-widening* of x and y. If tp is not the null pointer, the *widening with tokens* delay technique is applied with *tp available tokens.

7.154.2.101 int ppl_Polyhedron_H79_widening_assign_with_tokens (ppl_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*, unsigned * *tp*) [related]

If the polyhedron y is contained in (or equal to) the polyhedron x, assigns to x the *H79-widening* of x and y. If tp is not the null pointer, the *widening with tokens* delay technique is applied with *tp available tokens.

7.154.2.102 int ppl_Polyhedron_BHRZ03_widening_assign (ppl_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*) [related]

If the polyhedron y is contained in (or equal to) the polyhedron x, assigns to x the *BHRZ03-widening* of x and y.

7.154.2.103 int ppl_Polyhedron_H79_widening_assign (ppl_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*) [related]

If the polyhedron y is contained in (or equal to) the polyhedron x, assigns to x the *H79-widening* of x and y.

7.154.2.104 int ppl_Polyhedron_limited_BHRZ03_extrapolation_assign_with_tokens (ppl_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*, ppl_const_Constraint_System_t *cs*, unsigned * *tp*) [related]

If the polyhedron y is contained in (or equal to) the polyhedron x, assigns to x the *BHRZ03-widening* of x and y intersected with the constraints in cs that are satisfied by all the points of x. If tp is not the null pointer, the *widening with tokens* delay technique is applied with *tp available tokens.

7.154.2.105 int ppl_Polyhedron_limited_H79_extrapolation_assign_with_tokens (ppl_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*, ppl_const_Constraint_System_t *cs*, unsigned * *tp*) [related]

If the polyhedron y is contained in (or equal to) the polyhedron x, assigns to x the *H79-widening* of x and y intersected with the constraints in cs that are satisfied by all the points of x. If tp is not the null pointer, the *widening with tokens* delay technique is applied with *tp available tokens.

7.154.2.106 int ppl_Polyhedron_limited_BHRZ03_extrapolation_assign (ppl_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*, ppl_const_Constraint_System_t *cs*) [related]

If the polyhedron `y` is contained in (or equal to) the polyhedron `x`, assigns to `x` the *BHRZ03-widening* of `x` and `y` intersected with the constraints in `cs` that are satisfied by all the points of `x`.

7.154.2.107 int ppl_Polyhedron_limited_H79_extrapolation_assign (ppl_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*, ppl_const_Constraint_System_t *cs*) [related]

If the polyhedron `y` is contained in (or equal to) the polyhedron `x`, assigns to `x` the *H79-widening* of `x` and `y` intersected with the constraints in `cs` that are satisfied by all the points of `x`.

7.154.2.108 int ppl_Polyhedron_bounded_BHRZ03_extrapolation_assign_with_tokens (ppl_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*, ppl_const_Constraint_System_t *cs*, unsigned * *tp*) [related]

If the polyhedron `y` is contained in (or equal to) the polyhedron `x`, assigns to `x` the *BHRZ03-widening* of `x` and `y` intersected with the constraints in `cs` that are satisfied by all the points of `x`, further intersected with all the constraints of the form $\pm v \leq r$ and $\pm v < r$, with $r \in \mathbb{Q}$, that are satisfied by all the points of `x`. If `tp` is not the null pointer, the *widening with tokens* delay technique is applied with `*tp` available tokens.

7.154.2.109 int ppl_Polyhedron_bounded_H79_extrapolation_assign_with_tokens (ppl_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*, ppl_const_Constraint_System_t *cs*, unsigned * *tp*) [related]

If the polyhedron `y` is contained in (or equal to) the polyhedron `x`, assigns to `x` the *H79-widening* of `x` and `y` intersected with the constraints in `cs` that are satisfied by all the points of `x`, further intersected with all the constraints of the form $\pm v \leq r$ and $\pm v < r$, with $r \in \mathbb{Q}$, that are satisfied by all the points of `x`. If `tp` is not the null pointer, the *widening with tokens* delay technique is applied with `*tp` available tokens.

7.154.2.110 int ppl_Polyhedron_bounded_BHRZ03_extrapolation_assign (ppl_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*, ppl_const_Constraint_System_t *cs*) [related]

If the polyhedron `y` is contained in (or equal to) the polyhedron `x`, assigns to `x` the *BHRZ03-widening* of `x` and `y` intersected with the constraints in `cs` that are satisfied by all the points of `x`, further intersected with all the constraints of the form $\pm v \leq r$ and $\pm v < r$, with $r \in \mathbb{Q}$, that are satisfied by all the points of `x`.

7.154.2.111 int ppl_Polyhedron_bounded_H79_extrapolation_assign (ppl_Polyhedron_t *x*, ppl_const_Polyhedron_t *y*, ppl_const_Constraint_System_t *cs*) [related]

If the polyhedron y is contained in (or equal to) the polyhedron x, assigns to x the *H79-widening* of x and y intersected with the constraints in cs that are satisfied by all the points of x, further intersected with all the constraints of the form $\pm v \leq r$ and $\pm v < r$, with $r \in \mathbb{Q}$, that are satisfied by all the points of x.

7.154.2.112 int ppl_new_C_Polyhedron_from_Int8_Box (ppl_Polyhedron_t * *pph*, ppl_const_Int8_Box_t *ph*) [related]

7.154.2.113 int ppl_new_NNC_Polyhedron_from_Int8_Box (ppl_Polyhedron_t * *pph*, ppl_const_Int8_Box_t *ph*) [related]

7.154.2.114 int ppl_new_C_Polyhedron_from_Int16_Box (ppl_Polyhedron_t * *pph*, ppl_const_Int16_Box_t *ph*) [related]

7.154.2.115 int ppl_new_NNC_Polyhedron_from_Int16_Box (ppl_Polyhedron_t * *pph*, ppl_const_Int16_Box_t *ph*) [related]

7.154.2.116 int ppl_new_C_Polyhedron_from_Int32_Box (ppl_Polyhedron_t * *pph*, ppl_const_Int32_Box_t *ph*) [related]

7.154.2.117 int ppl_new_NNC_Polyhedron_from_Int32_Box (ppl_Polyhedron_t * *pph*, ppl_const_Int32_Box_t *ph*) [related]

7.154.2.118 int ppl_new_C_Polyhedron_from_Int64_Box (ppl_Polyhedron_t * *pph*, ppl_const_Int64_Box_t *ph*) [related]

7.154.2.119 int ppl_new_NNC_Polyhedron_from_Int64_Box (ppl_Polyhedron_t * *pph*, ppl_const_Int64_Box_t *ph*) [related]

7.155.1 Detailed Description

Types and functions for ppl_Rational_Box_tag.

7.155.2 Friends And Related Function Documentation

7.155.2.1 int ppl_delete_Rational_Box (ppl_const_Rational_Box_t *ph*) [related]

7.155.2.2 int ppl_new_Rational_Box_from_space_dimension (ppl_Rational_Box_t * *pph*, ppl_dimension_type *d*, int *empty*) [related]

7.155.2.3 int ppl_new_Rational_Box_from_Int8_Box (ppl_Rational_Box_t * *pph*, ppl_const_Int8_Box_t *ph*) [related]

7.155.2.4 int ppl_new_Rational_Box_from_Int16_Box (ppl_Rational_Box_t * *pph*, ppl_const_Int16_Box_t *ph*) [related]

7.155.2.5 int ppl_new_Rational_Box_from_Int32_Box (ppl_Rational_Box_t * *pph*, ppl_const_Int32_Box_t *ph*) [related]

7.155.2.6 int ppl_new_Rational_Box_from_Int64_Box (ppl_Rational_Box_t * *pph*, ppl_const_Int64_Box_t *ph*) [related]

7.155.2.7 int ppl_new_Rational_Box_from_Uint8_Box (ppl_Rational_Box_t * *pph*, ppl_const_Uint8_Box_t *ph*) [related]

7.155.2.8 int ppl_new_Rational_Box_from_Uint16_Box (ppl_Rational_Box_t * *pph*, ppl_const_Uint16_Box_t *ph*) [related]

7.155.2.9 int ppl_new_Rational_Box_from_Uint32_Box (ppl_Rational_Box_t * *pph*, ppl_const_Uint32_Box_t *ph*) [related]

7.158.1 Detailed Description

Types and functions for ppl_Uint64_Box_tag.

7.158.2 Friends And Related Function Documentation

7.158.2.1 int ppl_delete_Uint64_Box (ppl_const_Uint64_Box_t *ph*) [related]

7.158.2.2 int ppl_new_Uint64_Box_from_space_dimension (ppl_Uint64_Box_t * *pph*, ppl_dimension_type *d*, int *empty*) [related]

7.158.2.3 int ppl_new_Uint64_Box_from_Int8_Box (ppl_Uint64_Box_t * *pph*, ppl_const_Int8_Box_t *ph*) [related]

7.158.2.4 int ppl_new_Uint64_Box_from_Int16_Box (ppl_Uint64_Box_t * *pph*, ppl_const_Int16_Box_t *ph*) [related]

7.158.2.5 int ppl_new_Uint64_Box_from_Int32_Box (ppl_Uint64_Box_t * *pph*, ppl_const_Int32_Box_t *ph*) [related]

7.158.2.6 int ppl_new_Uint64_Box_from_Int64_Box (ppl_Uint64_Box_t * *pph*, ppl_const_Int64_Box_t *ph*) [related]

7.158.2.7 int ppl_new_Uint64_Box_from_Uint8_Box (ppl_Uint64_Box_t * *pph*, ppl_const_Uint8_Box_t *ph*) [related]

7.158.2.8 int ppl_new_Uint64_Box_from_Uint16_Box (ppl_Uint64_Box_t * *pph*, ppl_const_Uint16_Box_t *ph*) [related]

7.158.2.9 int ppl_new_Uint64_Box_from_Uint32_Box (ppl_Uint64_Box_t * *pph*, ppl_const_Uint32_Box_t *ph*) [related]

7.158.2.10 int ppl_new_Uint64_Box_from_Uint64_Box (ppl_Uint64_Box_t * *pph*, ppl_const_Uint64_Box_t *ph*) [related]

7.158.2.11 int ppl_new_Uint64_Box_from_Z_Box (ppl_Uint64_Box_t * *pph*, ppl_const_Z_Box_t *ph*) [related]

7.158.2.12 int ppl_new_Uint64_Box_from_Rational_Box (ppl_Uint64_Box_t * *pph*, ppl_const_Rational_Box_t *ph*) [related]

7.158.2.13 int ppl_new_Uint64_Box_from_BD_Shape_int8_t (ppl_Uint64_Box_t * *pph*, ppl_const_BD_Shape_int8_t_t *ph*) [related]

7.158.2.14 int ppl_new_Uint64_Box_from_BD_Shape_int16_t (ppl_Uint64_Box_t * *pph*, ppl_const_BD_Shape_int16_t_t *ph*) [related]

7.158.2.15 int ppl_new_Uint64_Box_from_BD_Shape_int32_t (ppl_Uint64_Box_t * *pph*, ppl_const_BD_Shape_int32_t_t *ph*) [related]

7.158.2.16 int ppl_new_Uint64_Box_from_BD_Shape_int64_t (ppl_Uint64_Box_t * *pph*, ppl_const_BD_Shape_int64_t_t *ph*) [related]

7.158.2.17 int ppl_new_Uint64_Box_from_BD_Shape_mpz_class (ppl_Uint64_Box_t * *pph*, ppl_const_BD_Shape_mpz_class_t *ph*) [related]

7.158.2.18 int ppl_new_Uint64_Box_from_BD_Shape_mpq_class (ppl_Uint64_Box_t * *pph*, ppl_const_BD_Shape_mpq_class_t *ph*) [related]

7.158.2.19 int ppl_new_Uint64_Box_from_Octagonal_Shape_int8_t (ppl_Uint64_Box_t * *pph*, ppl_const_Octagonal_Shape_int8_t_t *ph*) [related]

7.158.2.20 int ppl_new_Uint64_Box_from_Octagonal_Shape_int16_t (ppl_Uint64_Box_t * *pph*, ppl_const_Octagonal_Shape_int16_t_t *ph*) [related]

7.158.2.21 int ppl_new_Uint64_Box_from_Octagonal_Shape_int32_t (ppl_Uint64_Box_t * *pph*, ppl_const_Octagonal_Shape_int32_t_t *ph*) [related]

7.158.2.22 int ppl_new_Uint64_Box_from_Octagonal_Shape_int64_t (ppl_Uint64_Box_t * *pph*, ppl_const_Octagonal_Shape_int64_t_t *ph*) [related]

7.158.2.23 int ppl_new_Uint64_Box_from_Octagonal_Shape_mpz_class (ppl_Uint64_Box_t * *pph*, ppl_const_Octagonal_Shape_mpz_class_t *ph*) [related]

7.158.2.24 int ppl_new_Uint64_Box_from_Octagonal_Shape_mpq_class (ppl_Uint64_Box_t * *pph*, ppl_const_Octagonal_Shape_mpq_class_t *ph*) [related]

7.159.1 Detailed Description

Types and functions for ppl_Uint8_Box_tag.

7.159.2 Friends And Related Function Documentation

7.159.2.1 int ppl_delete_Uint8_Box (ppl_const_Uint8_Box_t *ph*) [related]

7.159.2.2 int ppl_new_Uint8_Box_from_space_dimension (ppl_Uint8_Box_t * *pph*, ppl_dimension_type *d*, int *empty*) [related]

7.159.2.3 int ppl_new_Uint8_Box_from_Int8_Box (ppl_Uint8_Box_t * *pph*, ppl_const_Int8_Box_t *ph*) [related]

7.159.2.4 int ppl_new_Uint8_Box_from_Int16_Box (ppl_Uint8_Box_t * *pph*, ppl_const_Int16_Box_t *ph*) [related]

7.159.2.5 int ppl_new_Uint8_Box_from_Int32_Box (ppl_Uint8_Box_t * *pph*, ppl_const_Int32_Box_t *ph*) [related]

7.159.2.6 int ppl_new_Uint8_Box_from_Int64_Box (ppl_Uint8_Box_t * *pph*, ppl_const_Int64_Box_t *ph*) [related]

7.159.2.7 int ppl_new_Uint8_Box_from_Uint8_Box (ppl_Uint8_Box_t * *pph*, ppl_const_Uint8_Box_t *ph*) [related]

7.159.2.8 int ppl_new_Uint8_Box_from_Uint16_Box (ppl_Uint8_Box_t * *pph*, ppl_const_Uint16_Box_t *ph*) [related]

7.159.2.9 int ppl_new_Uint8_Box_from_Uint32_Box (ppl_Uint8_Box_t * *pph*, ppl_const_Uint32_Box_t *ph*) [related]

7.159.2.10 int ppl_new_Uint8_Box_from_Uint64_Box (ppl_Uint8_Box_t * *pph*, ppl_const_Uint64_Box_t *ph*) [related]

7.159.2.11 int ppl_new_Uint8_Box_from_Z_Box (ppl_Uint8_Box_t * *pph*, ppl_const_Z_Box_t *ph*) [related]

7.159.2.12 int ppl_new_Uint8_Box_from_Rational_Box (ppl_Uint8_Box_t * *pph*, ppl_const_Rational_Box_t *ph*) [related]

7.159.2.13 int ppl_new_Uint8_Box_from_BD_Shape_int8_t (ppl_Uint8_Box_t * *pph*, ppl_const_BD_Shape_int8_t_t *ph*) [related]

7.159.2.14 int ppl_new_Uint8_Box_from_BD_Shape_int16_t (ppl_Uint8_Box_t * *pph*, ppl_const_BD_Shape_int16_t_t *ph*) [related]

7.159.2.15 int ppl_new_Uint8_Box_from_BD_Shape_int32_t (ppl_Uint8_Box_t * *pph*, ppl_const_BD_Shape_int32_t_t *ph*) [related]

7.159.2.16 int ppl_new_Uint8_Box_from_BD_Shape_int64_t (ppl_Uint8_Box_t * *pph*, ppl_const_BD_Shape_int64_t_t *ph*) [related]

7.159.2.17 int ppl_new_Uint8_Box_from_BD_Shape_mpz_class (ppl_Uint8_Box_t * *pph*, ppl_const_BD_Shape_mpz_class_t *ph*) [related]

7.159.2.18 int ppl_new_Uint8_Box_from_BD_Shape_mpq_class (ppl_Uint8_Box_t * *pph*, ppl_const_BD_Shape_mpq_class_t *ph*) [related]

7.159.2.19 int ppl_new_Uint8_Box_from_Octagonal_Shape_int8_t (ppl_Uint8_Box_t * *pph*, ppl_const_Octagonal_Shape_int8_t_t *ph*) [related]

7.159.2.20 int ppl_new_Uint8_Box_from_Octagonal_Shape_int16_t (ppl_Uint8_Box_t * *pph*, ppl_const_Octagonal_Shape_int16_t_t *ph*) [related]

7.159.2.21 int ppl_new_Uint8_Box_from_Octagonal_Shape_int32_t (ppl_Uint8_Box_t * *pph*, ppl_const_Octagonal_Shape_int32_t_t *ph*) [related]
